

Preface

In May 2003, a group of experts in the ethics of life sciences came together in Wageningen, The Netherlands, to discuss the most urgent ethical problems faced by these sciences and connected technologies. This volume is a reflection of the presentations and discussions during this Workshop. Tassos Michalopoulos (Applied Philosophy Group, Wageningen University) and, in particular, Wendelien Ordelman (Frontis, Wageningen University and Research Centre) have, by their continuous support and assistance, greatly contributed to the favourable context for these discussions. We thank the authors for their important contributions, and Wageningen University and Research Centre for providing the funds for this meeting. We also thank Paulien van Vredendaal (Library, Wageningen University and Research Centre), who played an important role in the lay-out process.

The editors,

Michiel Korthals
Robert J. Bogers

Wageningen, July 2004
