Werkdocument GWAO - 92.850 X

Aan : Belangstelienden.
Van : Henk Baptist
Datum : 4 augustus 1992
Onderwerp : Verspreiding dolfijnen.

Ten lange leste is een overzicht beschikbaar van de waarnemingen van dolfijnen gedaan tijdens de vogels/zoogdiertellingen op het NCP.

Wanneer de vogelatlas gereed is zal een aanvang worden gemaakt met het analyseren van deze gegevens. Op voorhand wordt middels verspreidingskaarten een beeld gegeven van de verspreiding.

Witsnuitdolfijn

Zoals het er nu naar uit ziet kunnen twee zones worden onderscheiden; de eerste van circa 53.20 - 54.30 NB en oostelijk tot 3.40 OL met een geregeld voorkomen in de periode december tot juni; een tweede bevattend het gehele NCP oost tot circa 5 OL met een voorkomen beperkt tot rondtrekkende groepjes.

Tuimelaar

In een beperkte tijd, van voorjaar 1990 tot in 1991 voorkomend in zeer kleine groepjes verspreid over het NCP oostelijk tot 4 OL.

Bruinvis

Verspreid voorkomend over het gehele NCP met mogelijk een hiaat op de plaatsen waar de Witsnuitdolfijnen het meest geregelde wintervoorkomen hebben.

Overige.

Enkele waarnemingen bestaan van Griend (1 maal) en van Witflankdolfijn.

Zeehonden zijn enkele malen in mei/juni offshore gezien en worden overigens alleen vlak onder de kust waargenomen.

Als bijlage is een print van de database opgenomen. De opbouw is als volgt:

achtlettercode voor de soort, aantal, positie NB en OL, datum met een vliegaanduiding, tijdstip, leeftijd (9 = adult, 7 = jong) en kleedcode (niet gebruikt).

De soortcodes zijn :

LAGEALBI = Lagenorhynchus albirostris = Witsnuitdolfijn

TURSTRUN = Tursiops truncatus = Tuimelaar

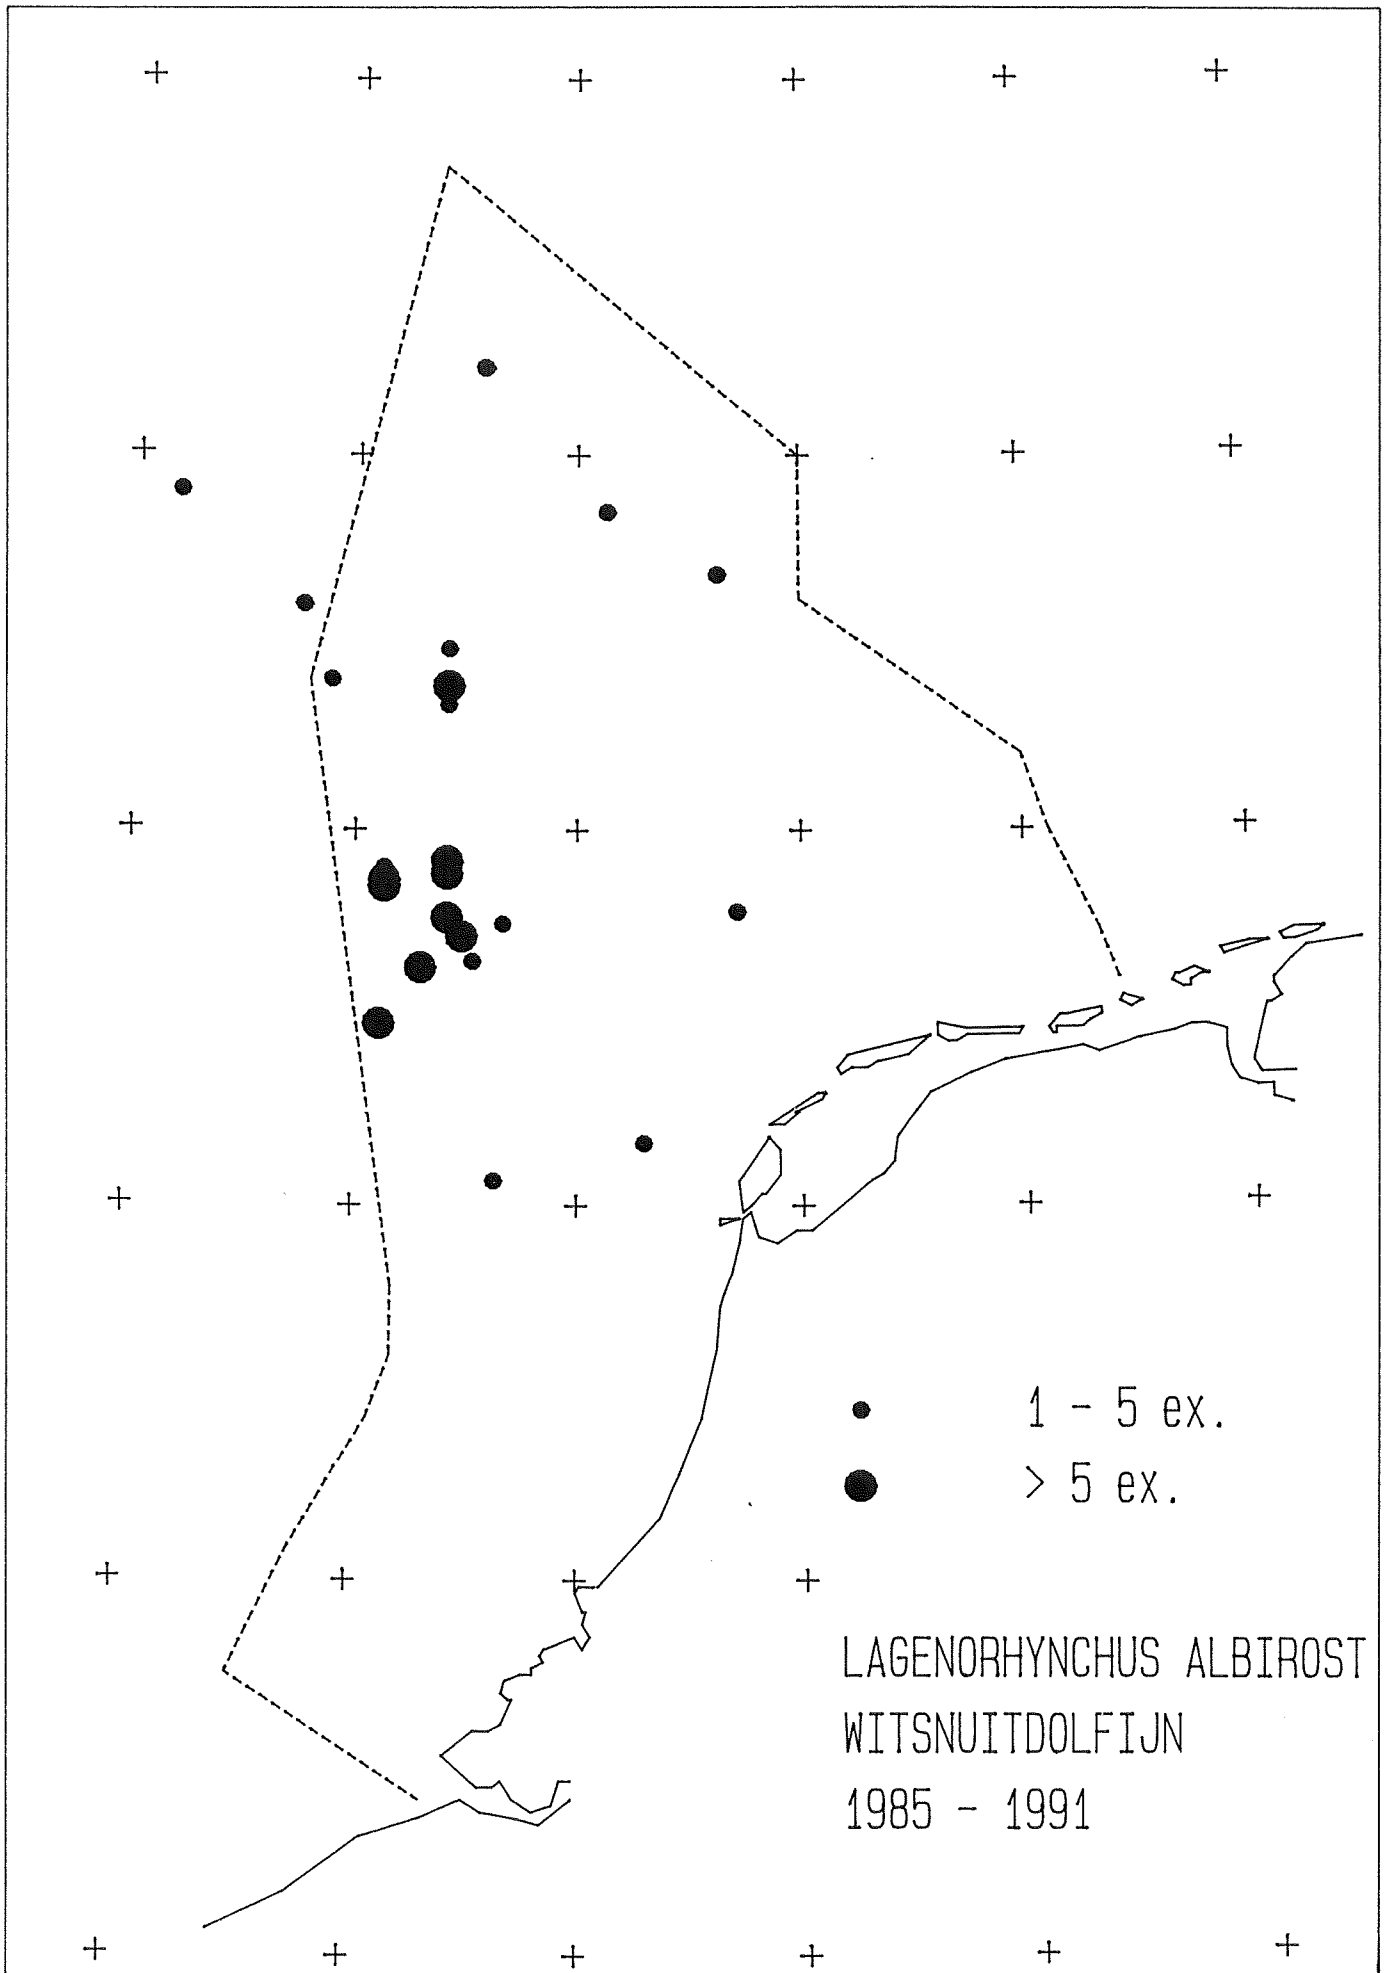

PHOCPHOC = Phocoena phocoena = Bruinvis

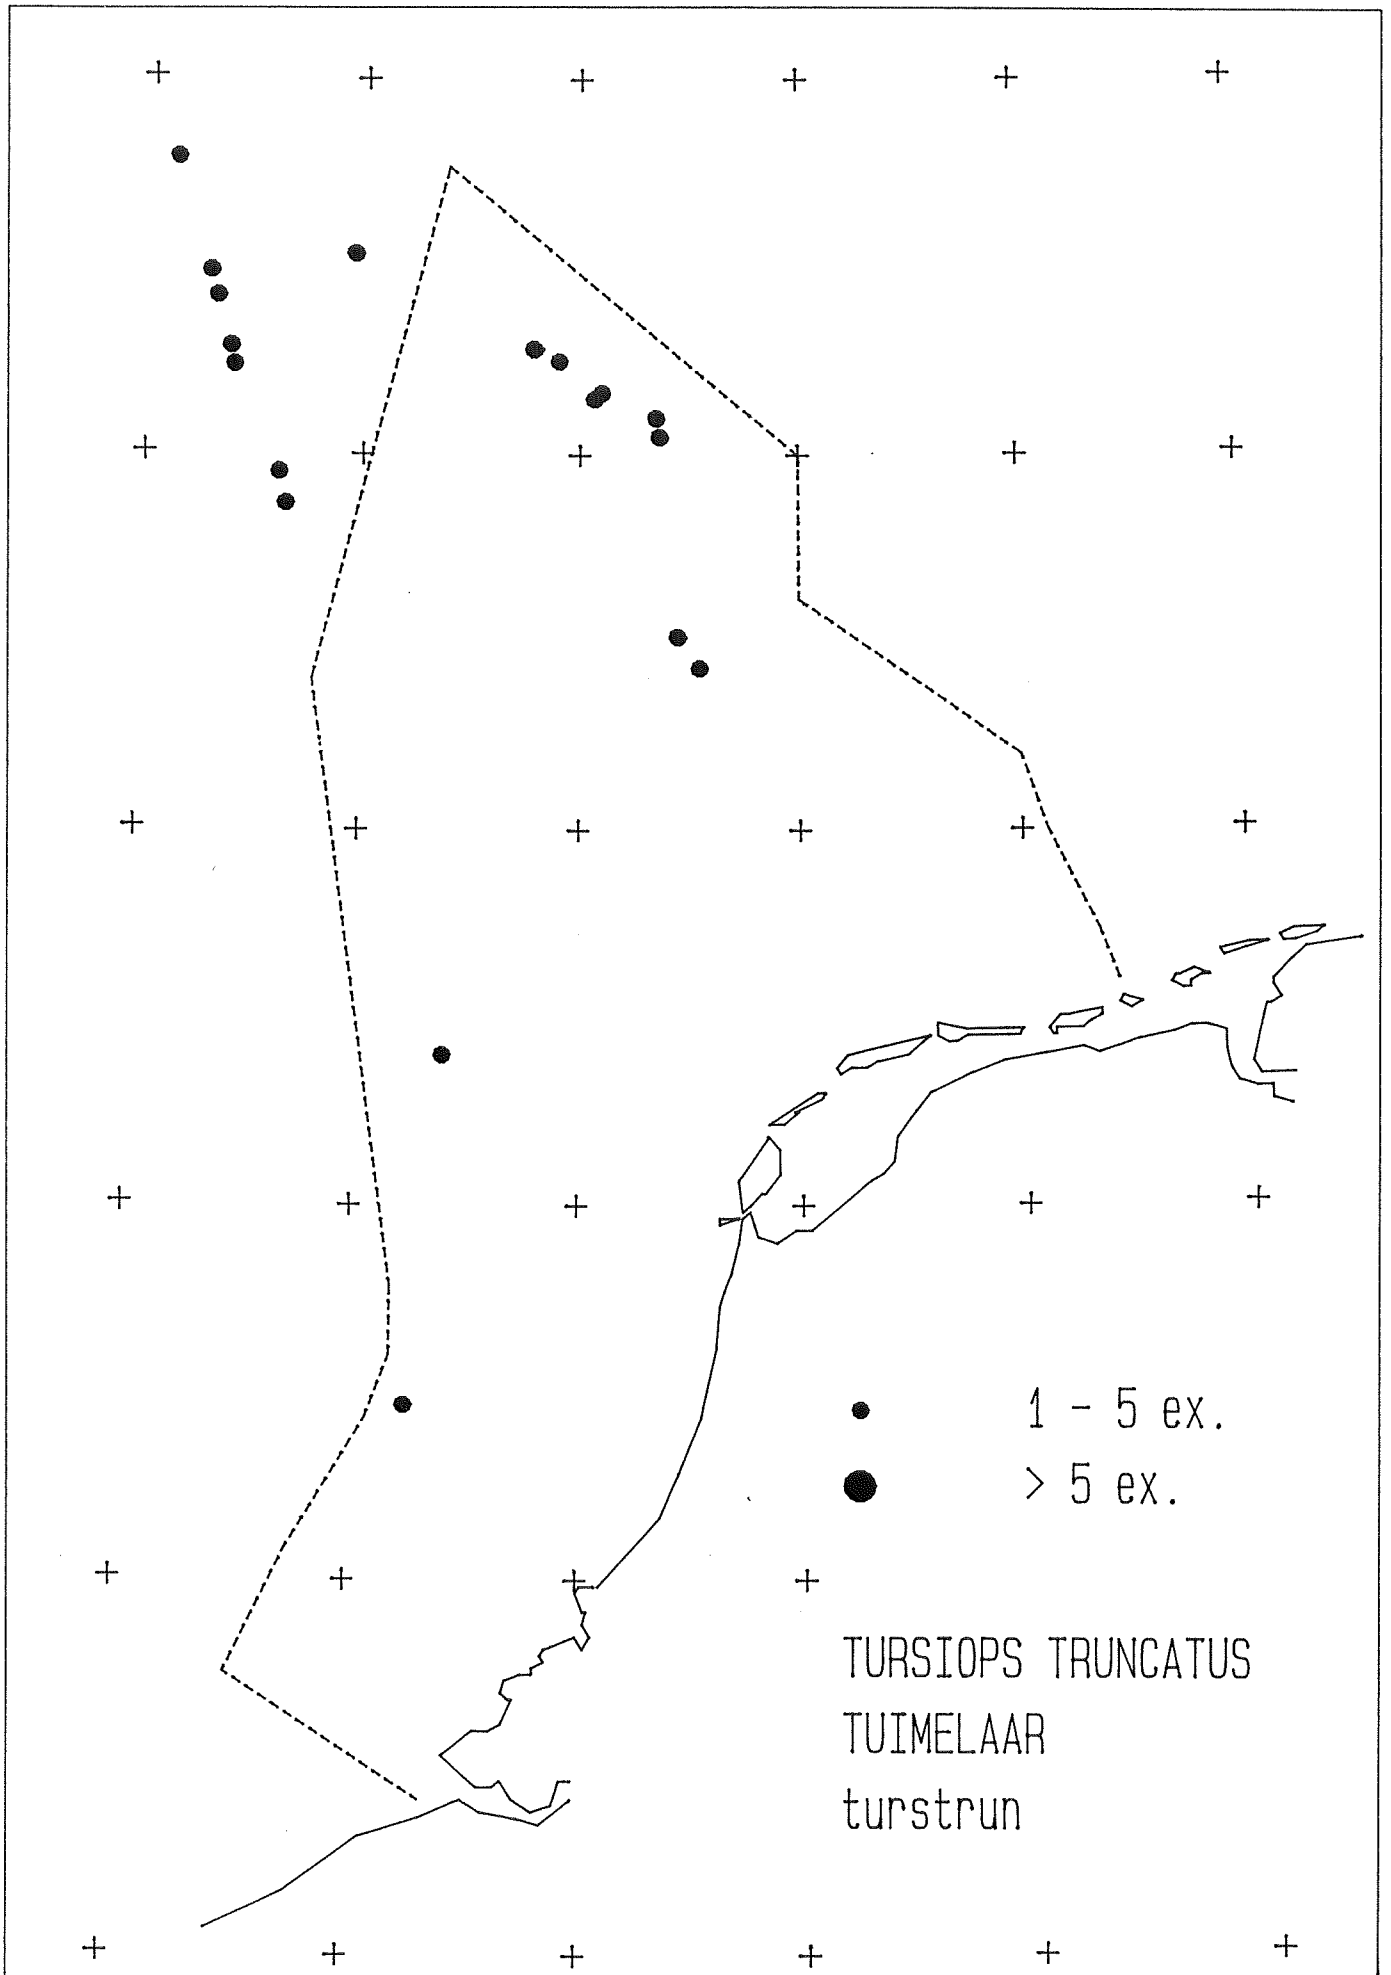

PHOCSPEC = Phoca species = niet gedetermineerde zeehonden

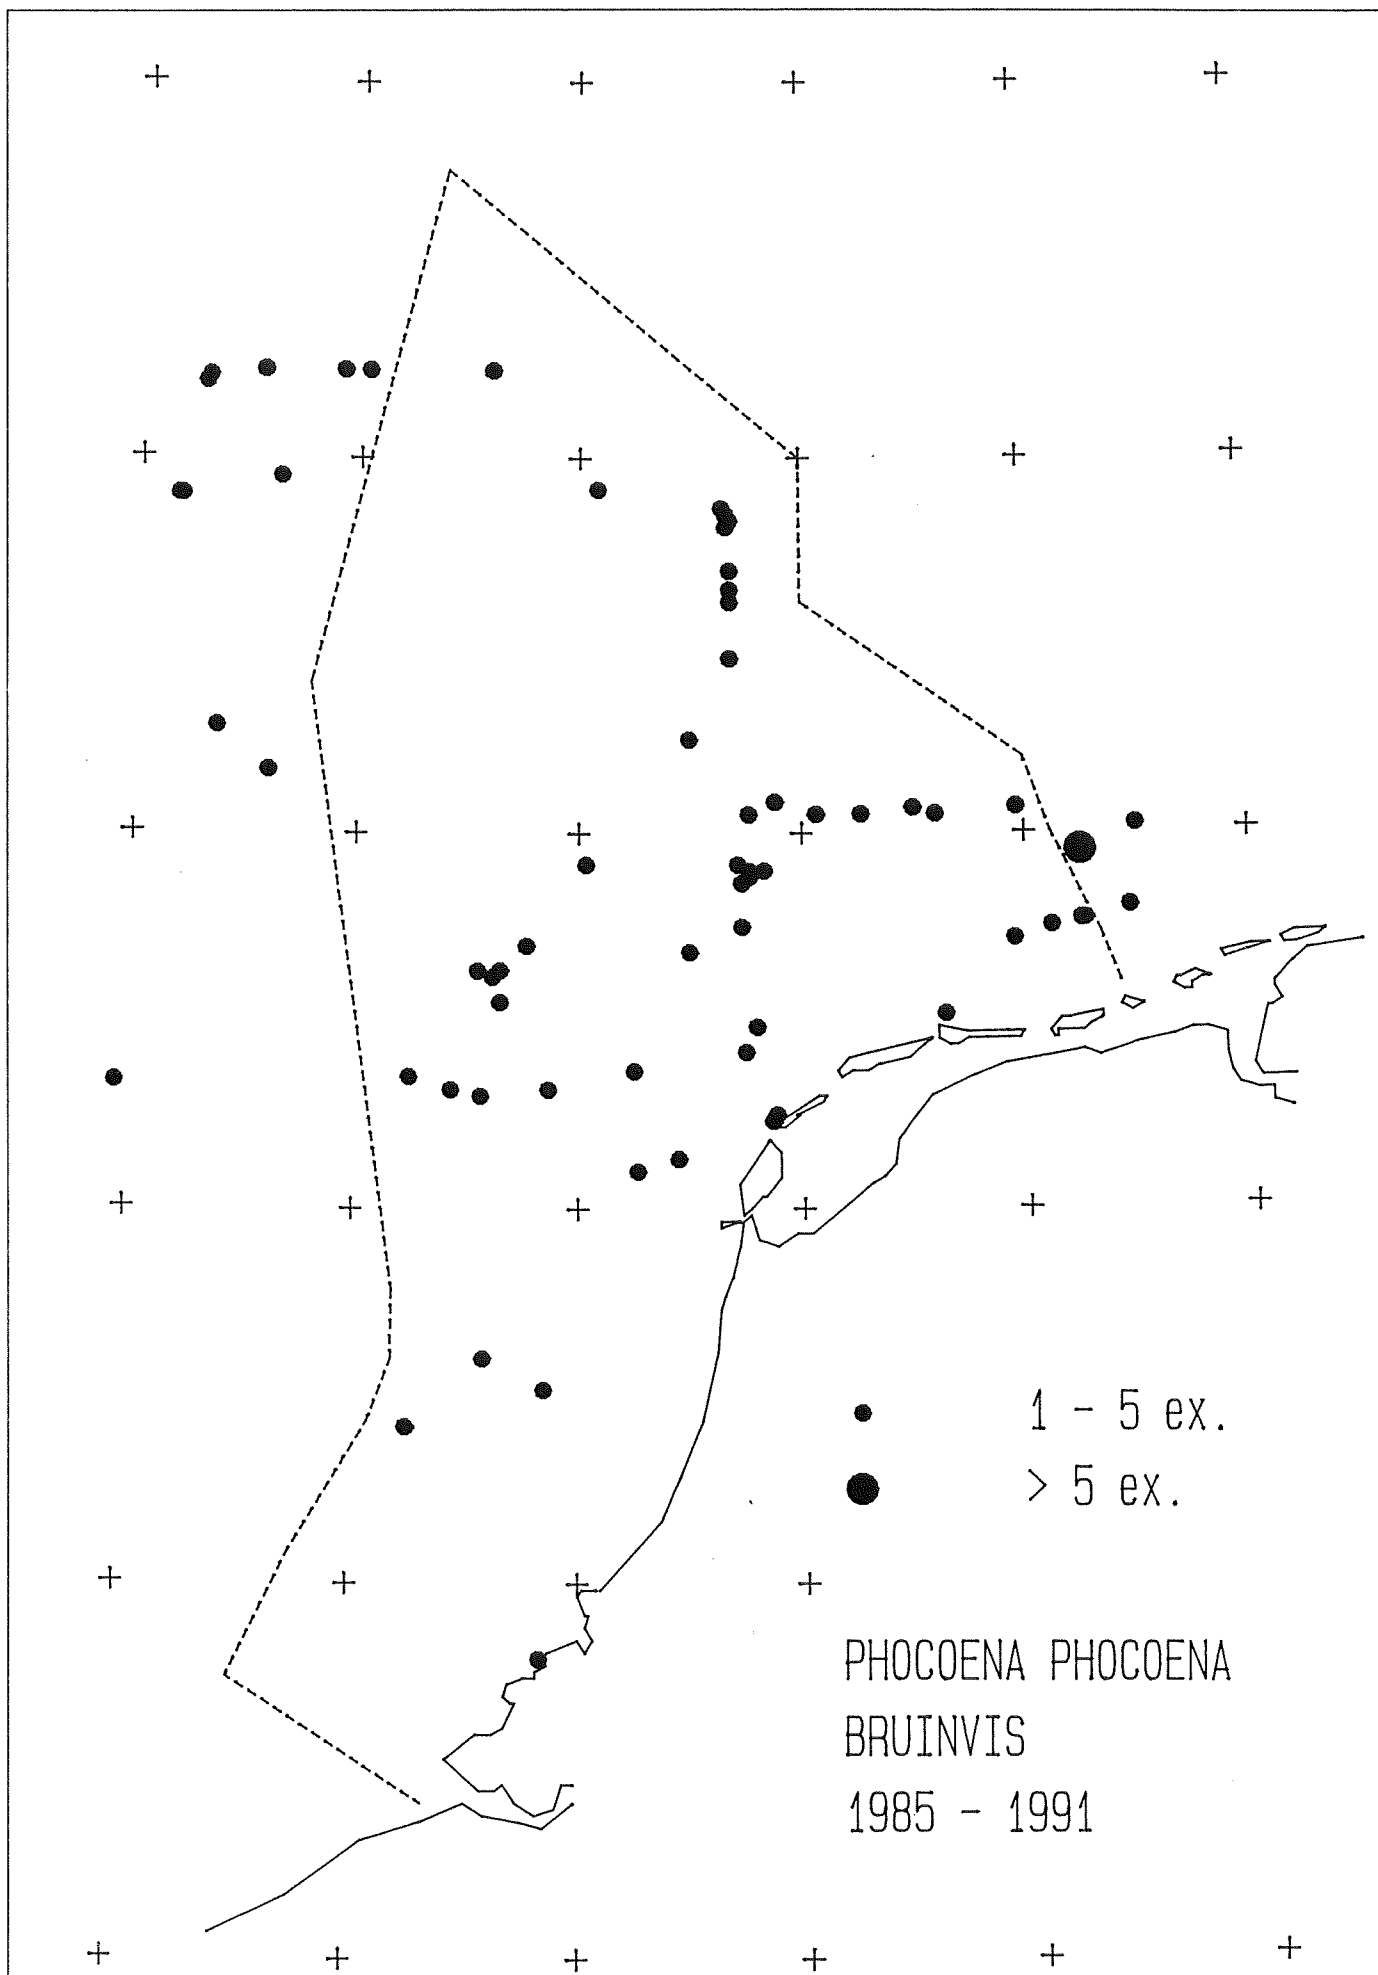

LAGEACUT = Lagenorhynchus acutus = Witflankdolfijn

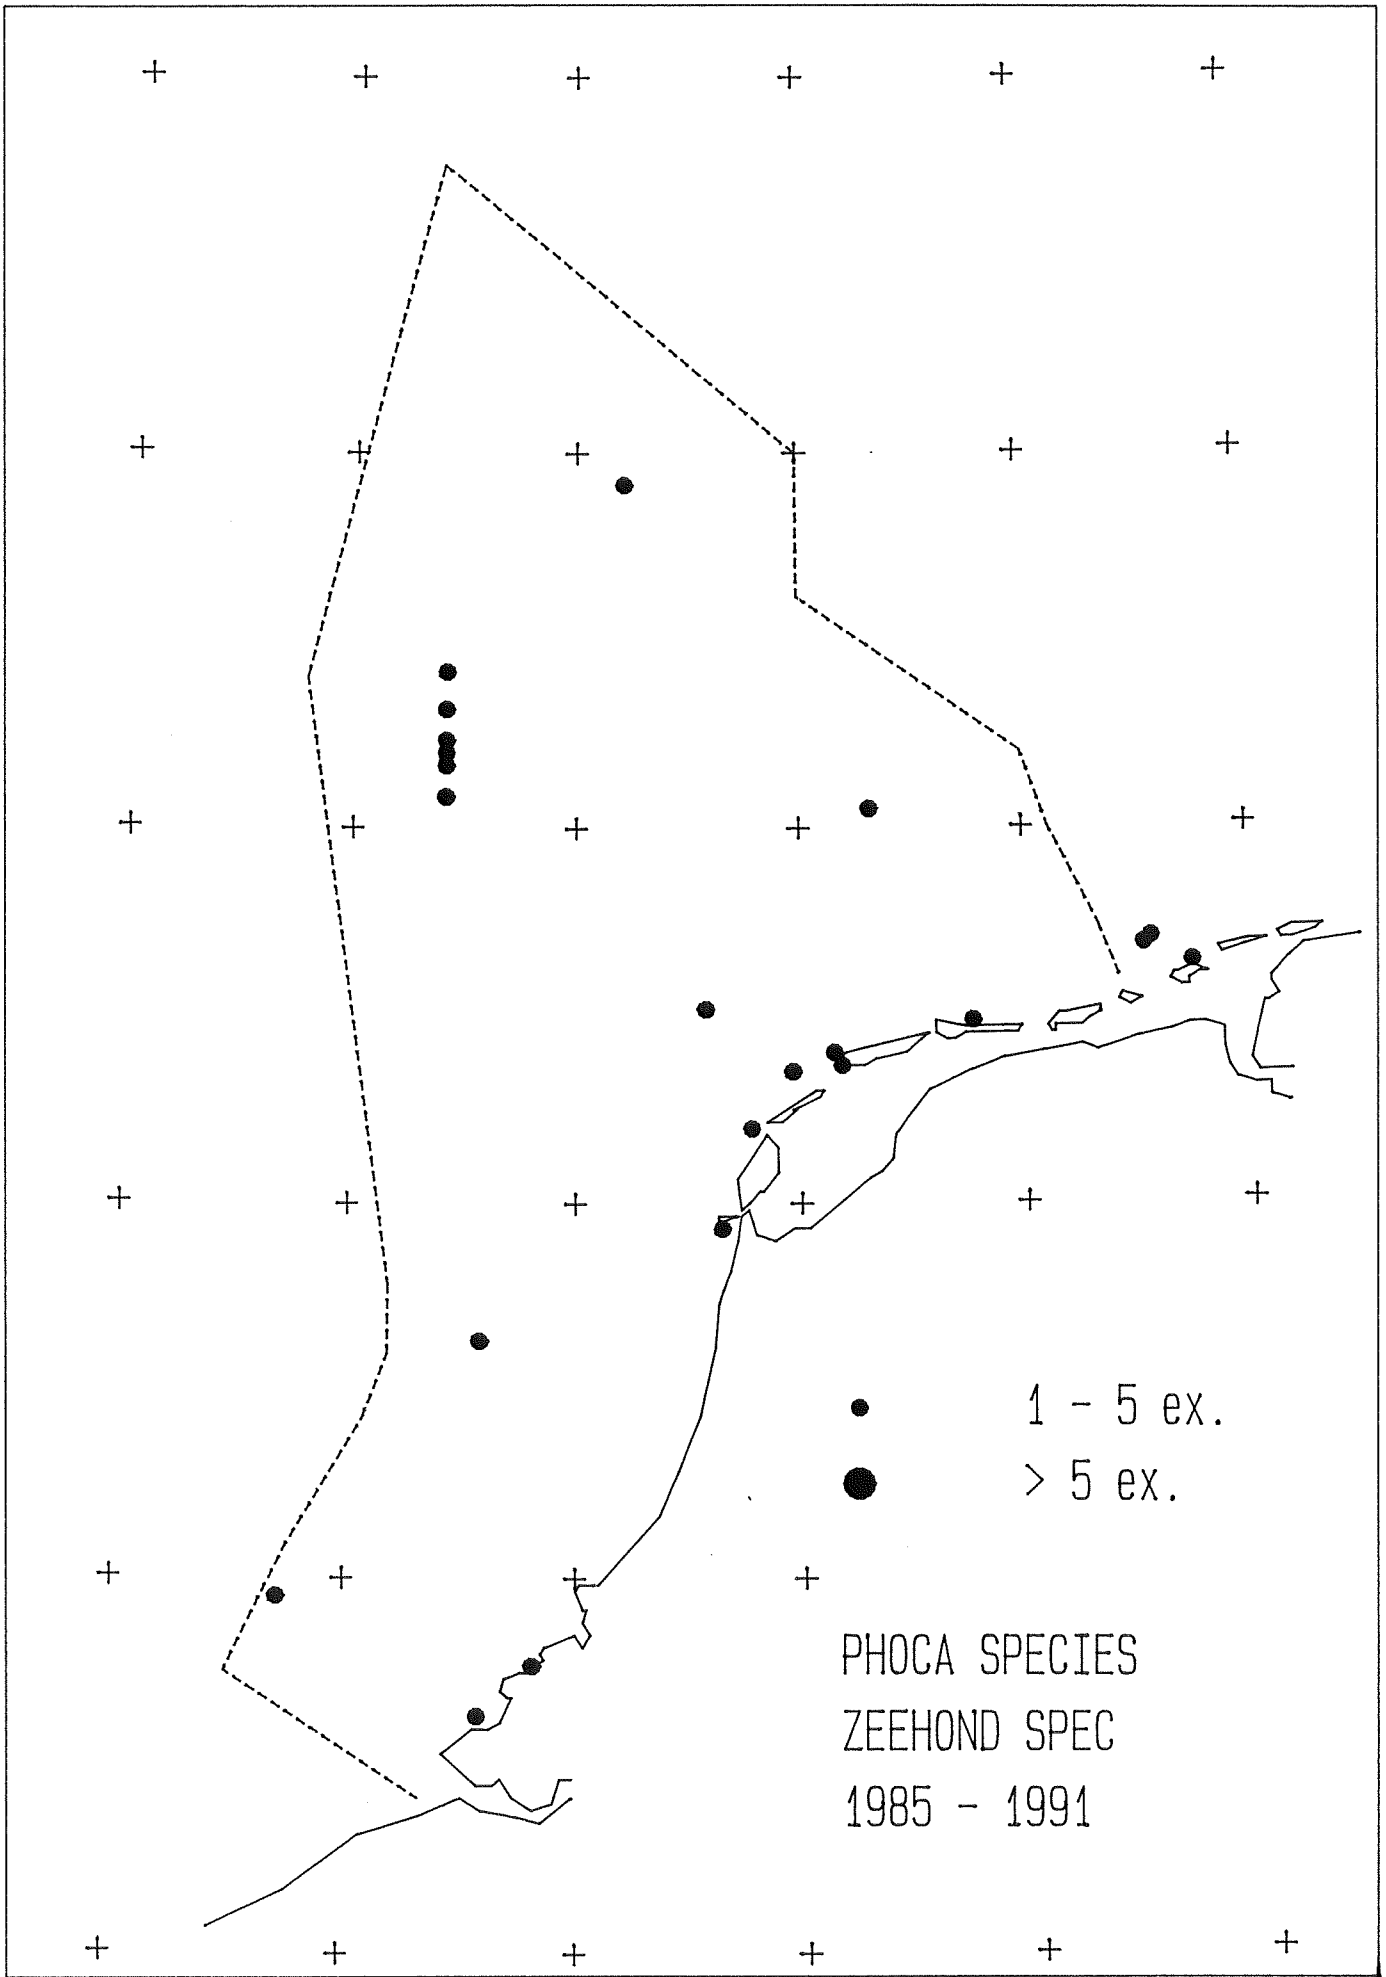

LAGESPEC = Lagenorhynchus species = Witsnuit-/Witflankdolfijn

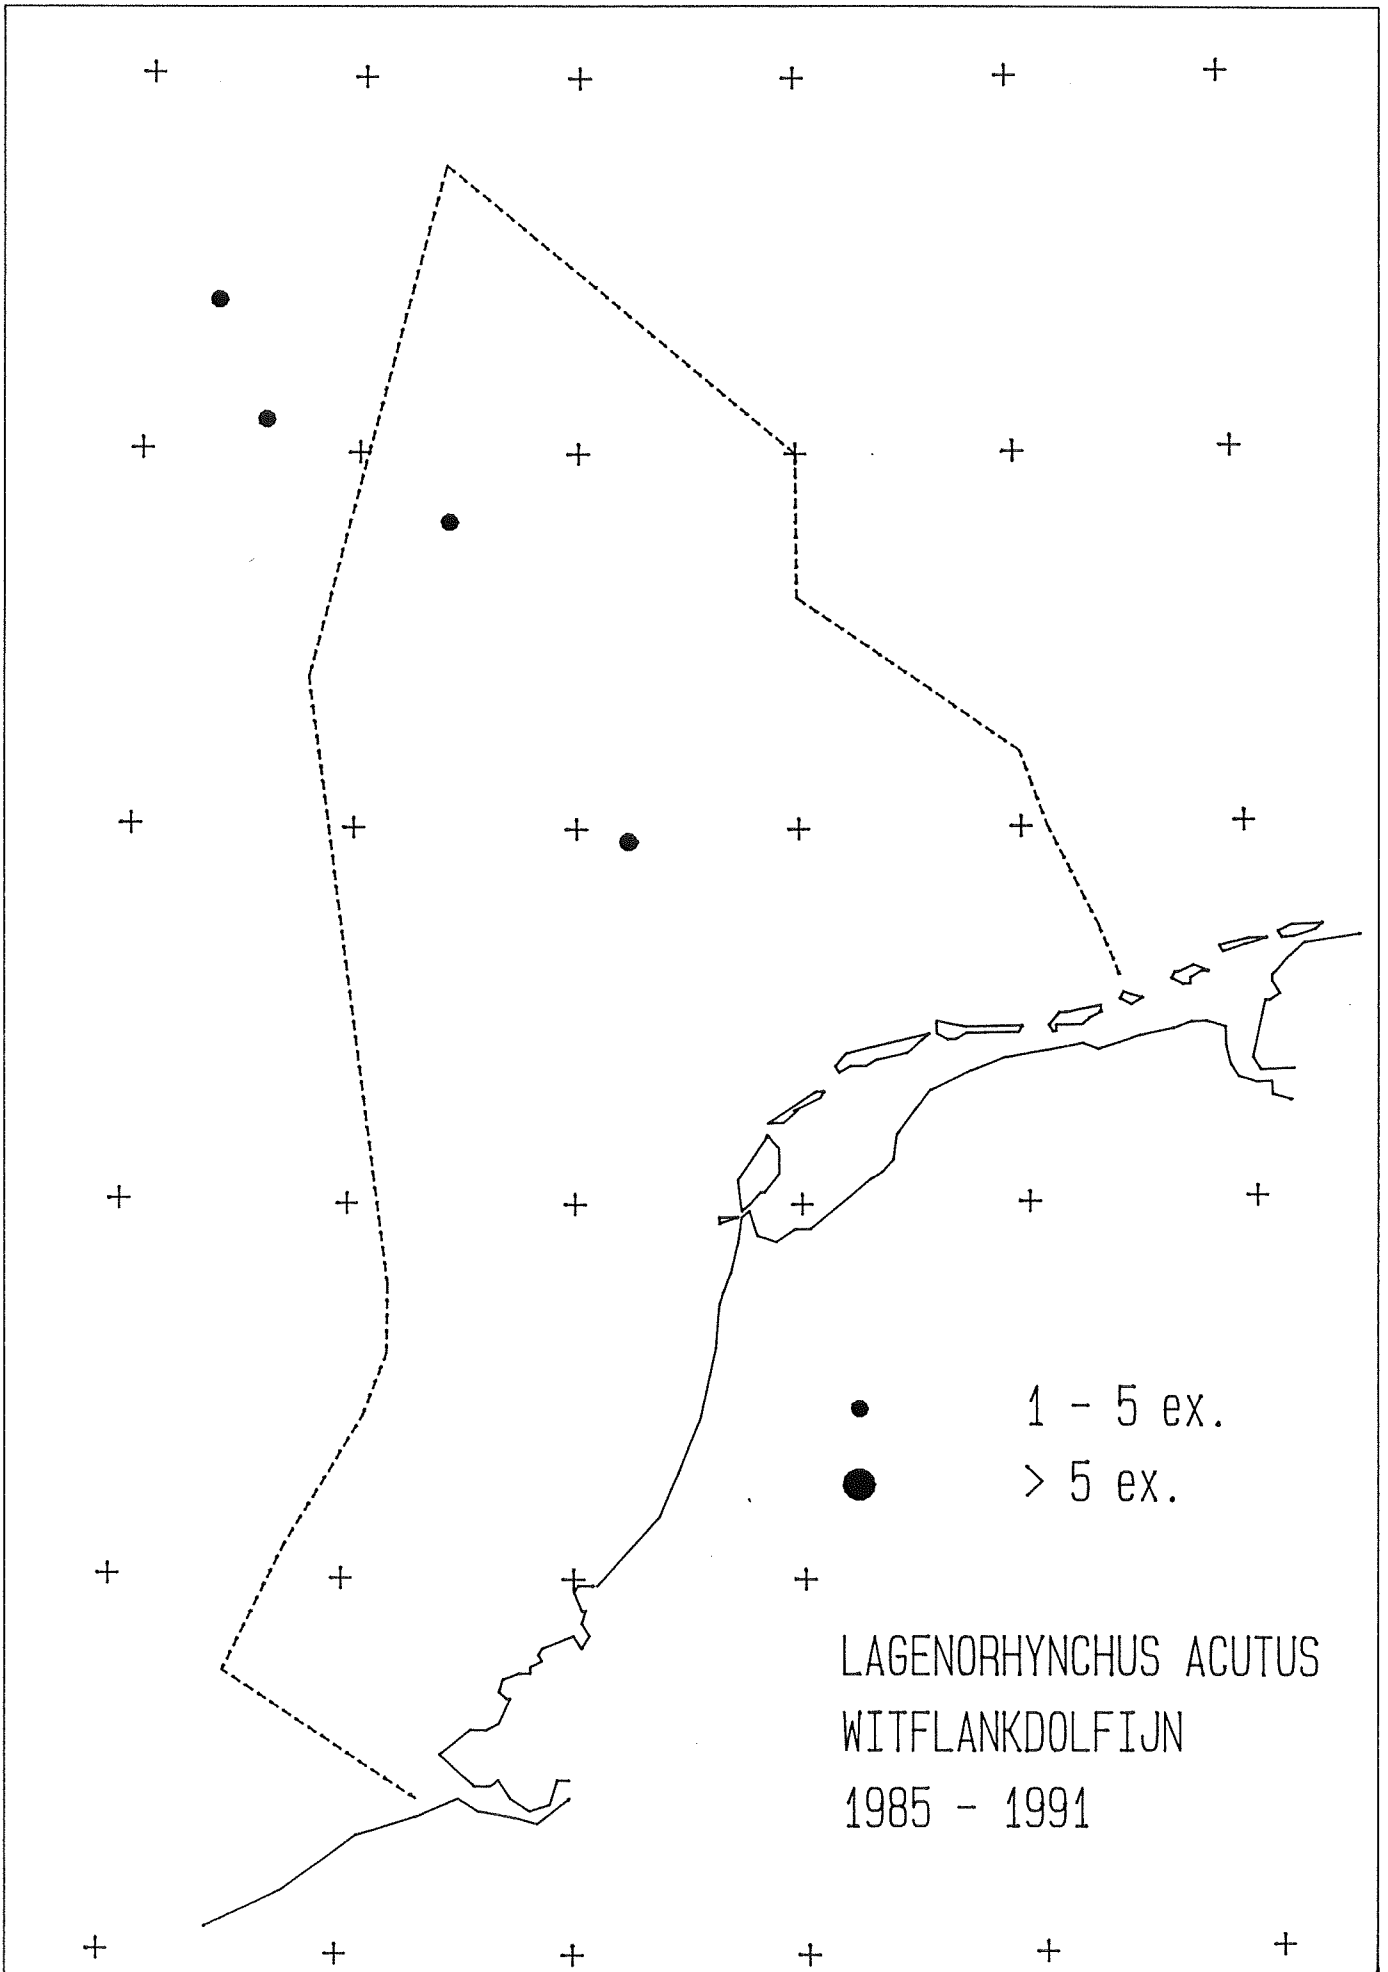

DOLPSPEC = Dolphinus species = niet gedetermineerde dolfijnen
