

## ERRATA

Equation (2.27), p. 20 should contain a normalisation factor  $L^{-3/2}$  instead of  $(k^3 L^3 / 6\pi^2)$ .

(The latter quantity represents the total number of states  $|PW(N)\rangle$  with  $k' < k$ , used for the derivation of the density of final states of the system molecular cation + free electron).

Reference 20, p. 81: (1980) in press should read: 31 (1980) 435.
