Consortium	Wageningen University, Environmental Systems Analysis / SENSE Research School for Socio-Economic and Natural Sciences of the Environment VU University Amsterdam, Faculty of Earth and Life Sciences, Institute of Environmental Studies		
Project website			
Starting date	1 August 2006	Completion date	31 December 2009

Three international summer schools will be held for PhD students:

1. S310: Understanding Global Environmental Change, providing an overview of the key processes in the climate system for PhD students from the natural sciences (see www.sense.nl/courses/cours/S310)
2. S460: Earth System Governance, providing an overview of the subject matter relevant for policies for the earth system for PhD students from the social sciences. Besides policy aspects, attention is given to the economics/environmental economics of adaptation and mitigation (see www.sense.nl/courses/cours/S460)
3. S340: Integrated Assessment of Global Environmental Change, integrating natural sciences and social sciences through the study of the causes and possible responses and practical training in making an Integrated Assessment

The three summer schools are run by the SENSE Research School for Socio-Economic and Natural Sciences of the Environment. At the moment, SENSE PhD students come from eight participating Dutch universities (see www.sense.nl). Their disciplinary backgrounds vary from the 'pure' natural sciences to the social sciences.

The summer schools are international in nature. They are open to PhD students and researchers from the Netherlands and abroad.
