Partnerships

- Increasing emphasis on co-operation and partnerships between private sector, government and other sectors of society for supporting climate risk reduction and adaptation.
- FP7 ENHANCE: Enhancing Risk Management Partnerships for Catastrophic Natural Disasters in Europe
- Multi-sector partnerships (MSPs) have the potential to significantly improve disaster risk management and adaptation.
- MSPs are **voluntary but enforceable commitments between public authorities, private enterprises and civil society organizations.**
- A very wide range of MSPs exist.

Approach

AIMS

- understand the effectiveness of public-private partnerships to address climate risks (???)
- identify indicators for successful partnerships and governance arrangements in improving resilience (??)
- reflect critically on the processes and barriers to developing MSPs (?)

PROCESS

- Investigate the London Climate Change Partnership (LCCP)
- Data collection – survey with LCCP members, complemented by interviews
- Questions relate **to perception of LCCP**, understanding of climate risks, sources of information, actions being undertaken, specific questions on current flood risk management in London.

The London Climate Change Partnership (LCCP)

- Longevity: established in 2002 by the Mayor
- Adaptation focus: a centre for expertise on climate change adaptation and resilience to extreme weather in London
- Membership: 23 public, private and civil society
- Host: Greater London Authority
- Member of the Climate UK group of regional partnerships

LCCP Partners

Initial results snapshot I

- Reasons for membership:
 - ✓ To influence climate change and other policy in London (80%)
 - ✓ Information and knowledge sharing on climate adaptation and resilience (80%)
 - ✓ Interest in supporting London climate adaptation and resilience (70%)
 - ✓ Carry out research and develop solutions for climate adaptation and resilience (50%)

Initial results snapshot II

What does the LCCP do?

LCCP fosters a knowledge sharing and supporting environment influencing climate adaptation policy in London

- Lobbying for climate change adaptation
- Research on climate change
- Information dissemination on climate risks and climate change for London
- Supporting wider UK adaptation to climate change
- Brings together a knowledge network on climate change for London
- Establishing best practice in climate change adaptation in London
- Knowledge exchange
- Other

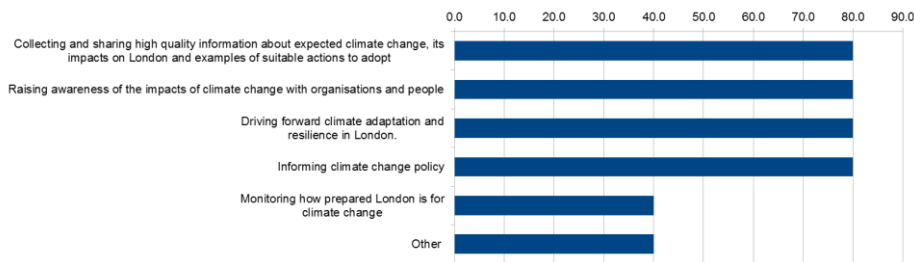

Initial results snapshot III

LCCP impact on adaptation in London – 50% see impact , 40% don't know, 10% see no impact

Those who see impact point to the following:

Initial results snapshot IV

- 90% identify barriers to delivering adaptation activities in London:

Funding (70%)

Knowledge exchange (30%)

Institutional inertia (50%)

Regulation (50%)

Initial results snapshot V

Future priorities for LCCP:

- raise awareness (general public, policy makers, potential partners)
- provide policy leadership
- support own adaptation efforts
- share knowledge & facilitate research
- demonstrate the value of adaptation
- engage with businesses
- create linkages between existing projects and other policy aims (example: flooding, well-being)
- influence infrastructure planning
- set risk standards for London
- identify funding options for adaptation

Reflections

- Longevity as an indicator for success?
- Impact on adaptation- what does it mean, how do you measure it?
- Where is LCCP in the adaptation process from awareness raising to implementing adaptation? (and where does it want to be?)
- How dynamic is a partnership in responding to changing needs? (membership, topical focus)

Thank you for your attention.
