

DEALING WITH UNCERTAINTY IN WATER MANAGEMENT

POLICY
ARENA
UNCERTAINTY

OVERALL PROJECT

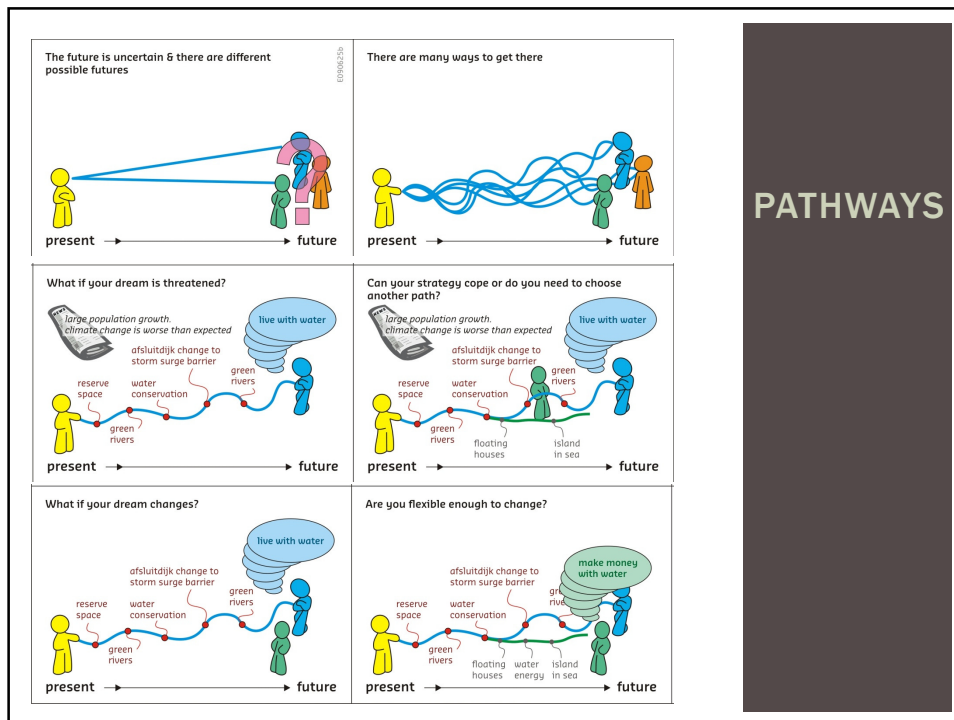

Key question:

Given the uncertainties about the future, what is the most sustainable water management strategy?

Approach:

- Including physical and social uncertainties
- Generate and assess pathways to the future

OUR FOCUS

- **Social uncertainty**
 - Understanding
 - Include in future studies
- **Policy arena:**
 - Policy makers is part of the scenario
 - Perspective, structure, policy action
 - Need to include policy response

OUR APPROACH

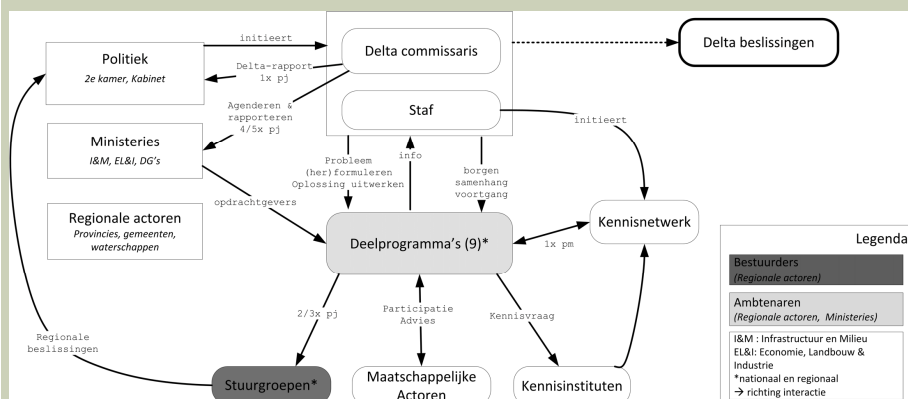

1. Understanding Policy arena

- Case study – Arena Delta Program (interviews)

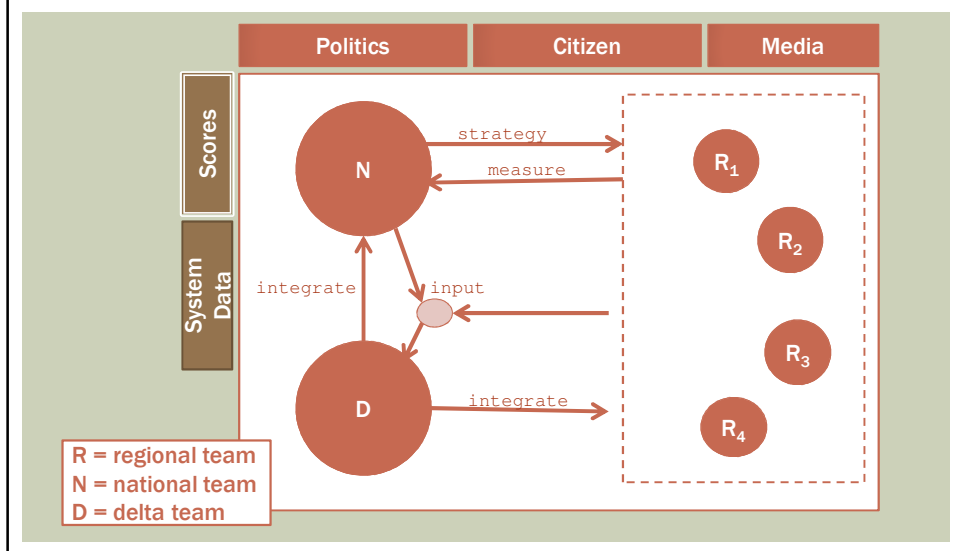

2. Generate pathways

- Serious gaming
 - Design for Rhine Game:
 - Policy arena & socio-economic scenarios
- Computational
 - Coupled Water-Policy model (perspective-based)
 - Generate large numbers of pathways

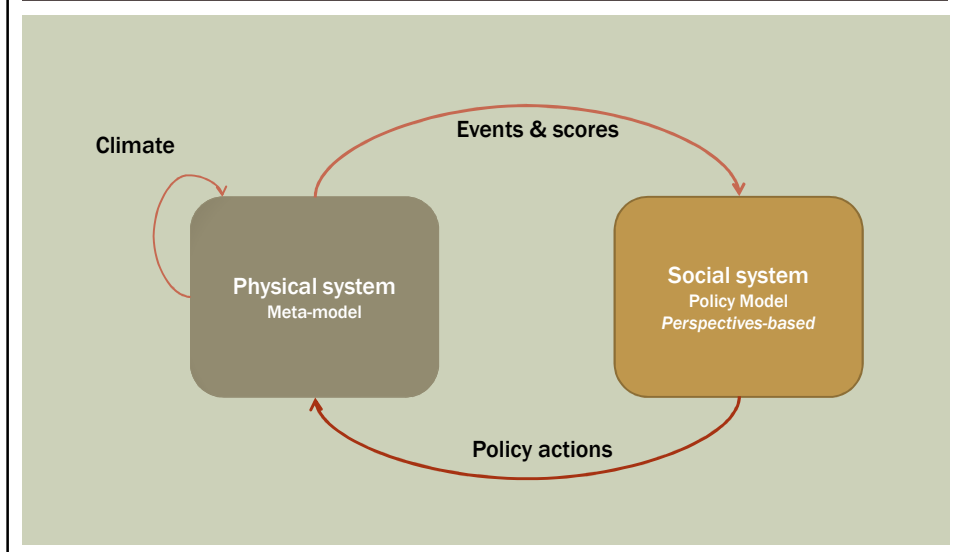

Examples of output – Delta programme

Examples of output – Game design

OUTPUT - SIMULATION

IMPLICATIONS

- **More realistic scenarios**
 - By understanding and embedding social uncertainty
 - Applied in both gaming and computational pathways
- **Practical**
 - Games played raised awareness for social uncertainties
 - Interviews were remarked as
 - Insightful and reflective
 - Better overview of the Delta programme

OUTPUT

COMMUNICATION

- **Papers (forthcoming)**
 - Policy analysis
 - DP arena & role in policy-making
 - LT policy making: challenges and uncertainties
 - Policy modelling
- **Endbook (forthcoming)**
 - Embedding in project
- **Conferences**
 - IEMss, ESSA, WDS, NCR, SF

PRODUCTS

- **Simulation**
- **Game design**
- **Socio-eco scenarios**
- **Serious game sessions**
(data & learning environment)
- **Misc:**
 - Movie Sustainable delta Games:
 - WaasOnline (serious game)
 - Waas HKU (playful learning)

Social dynamics (2) – first results

WAASPOLICY
