

## **Innovations in urban water management to reduce the vulnerability of cities**

Rutger de Graaf

### **Propositions I would like to discuss with you**

- 1.The development of local water resources decreases the vulnerability of cities to droughts.**
- 2.A hundred years from now, floating cities will be just as common as cars are today. Cars, on the other hand, will be just as rare as floating cities are today.**
- 3.The receptivity of water managers to a certain technology determines if this technology is applied. Technical and economic feasibility are not sufficient.**
- 4.Similar to children, it is inevitable for cities to grow up, clean up their own mess, and support themselves.**
- 5.Humour is an essential ingredient for innovation.**
