

Kennis voor Klimaat Knowledge for Climate

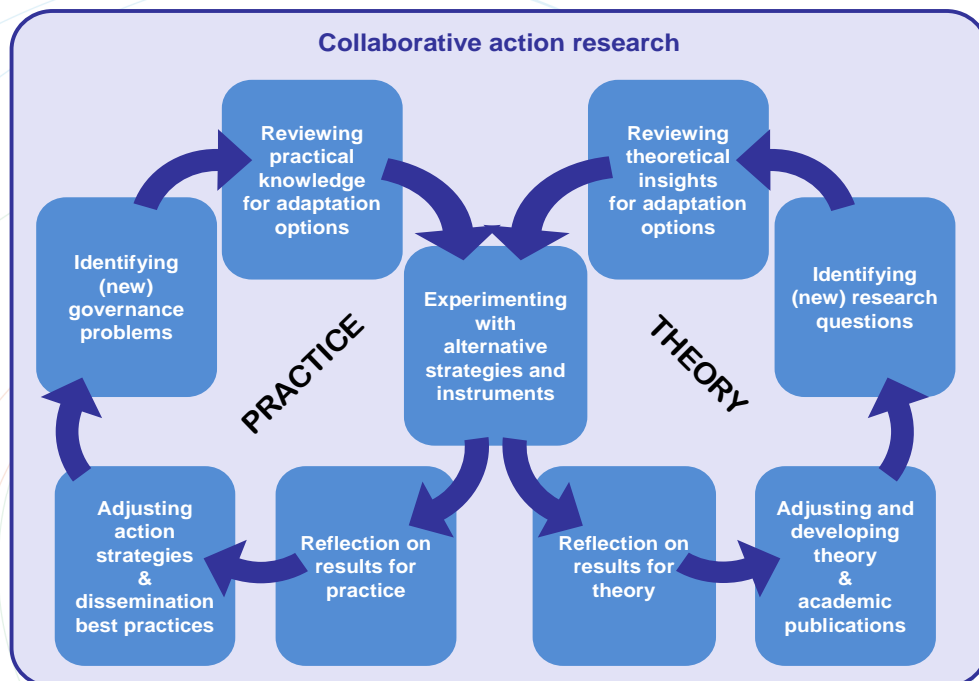

Center of Excellence “Governance of adaptation to climate change”

WP1 - Collaborative action research

Katrien Termeer, Arwin van Buuren, Patrick Huntjens, Jasper Eshuis

Main research question:

How can we improve the development of practically relevant and scientifically sound knowledge by setting up boundary arrangements and applying collaborative action research methods?

Project 1.1 Knowledge brokering between scientists and hotspot partners

The knowledge-brokering center will act as boundary arrangement. It facilitates:

- a governance helpdesk;
- links between researchers and hotspots;
- learning processes between hotspots;
- information for the general public.

Card sorting
Focus groups
Group model building
Cognitive mapping
Reframing as process intervention
Community participation
Transdisciplinary research

Project 1.2 Enhancing, supporting and reflecting upon collaborative action research approach methodology

This project is the methodological conscience of the research programme. It aims:

- To translate the philosophy of collaborative action research into practical methods;
- To enhance the theoretical foundation of collaborative action research in the specific context of governance of climate adaptation.
