During baseline in mid-2012, Common Room was in process of moving locations due to difficulties in agreeing to rental terms and conditions. Its current location is less central than its previous location[19]. The new office no longer has a gallery to display artworks or space to hold exhibitions. It is located in the middle of a residential area, where only a low level of noise and smaller crowds are tolerable. For youth and university students, it is further away and less accessible making it less attractive for young people to gather at Common Room. As an internal factor, the new location may explain why Common Room has seemingly become less effective in implementing its regular activities, which includes Karinding classes and a practice space for heavy metal groups.

In addition, Common Room's vision and its wide scope with regards to themes and target groups is rather utopian in the sense that it does not have an explicit political aspiration and practical vision of the organisation's direction[20]. This explains why Common Room has a vague definition of their target groups, as demonstrated by a lack of such a definition in their proposal or activity plans. While such a vague definition presents problems in measuring Common Room's effectiveness and efficiency, it also contradicts the high dependency of Common Room on its director, Gustaff H. Iskandar. External actors interviewed during the baseline criticized Common Room for being a 'one-man-show'. The evaluation team found that such criticism is still applicable for Common Room at present, and this was also confirmed by Hivos. The developments in the metal and Karinding scene could also be attributed to the promulgation of personal interests of the director, a fan as well as a prominent figure in the punk and metal scene[21].

### 5.5.2 External factors

An external factor that supported the achievements by Common Room is the enabling environment that exists in Bandung. The current mayor is generally supportive of art, culture and creative initiatives. He was the former head of the Bandung Creative City Forum (BCCF) before taking office. The mayor's involvement in BCCF, which claims to accommodate the interests of the public, made him amenable to engaging BCCF as a partner in developing the city's creative potential[22].

During the 2011-2014 period, similar initiatives for the creation of alternative public spaces have emerged in Bandung. These spaces include Simpul Space 1 & 2 (provided by BCCF)[23], Galeri Gerilya, as well as private sector initiatives such as Selasar Soenaryo Art Space, a gallery and cafe. In this sense, Common Room has had to compete with similar players in the arts and culture arena.

In 2011, the former president Susilo Bambang Yudhoyono established a new Ministry for Tourism and Creative Economy. Common Room received support from the government through this Ministry. Common Room was involved in the development of policies for creative economy for Bandung in 2013 and worked with the Ministry to support the revival of cultural centres[24]. In 2013, 44 percent of Common Room's funding came from the Ministry for Tourism and Creative Economy[25]. Following the 2014 elections, there has been a cabinet reshuffle and the Ministry has been renamed Ministry of Tourism. For Common Room this change is likely to impact their ability to receive financial support from the government as there is no longer an emphasis on creative economy.

[19] Common Room moved from Jalan Kyai Gede Utama to Jalan Muararjeun.

### 5.5.3 Relations CFA-SPO

Common Room received support from Hivos since 2005, even before it was officially established as a foundation. It received micro-funds from Hivos twice in the 2005-2009 period before a regular partner contract was prepared in 2011[26].

Funds from Hivos in the 2012-2014 period were also meant to support the strengthening of Common Room organisationally. Hivos' support also helped cover the rental costs (20 percent of € 35,000 provided in 2012-2013), which were especially important when Common Room had to face the difficult decision to relocate. Other capacity development support provided by Hivos was in the form of two workshops on governance in the organisations (management, vision and mission) and on theory of change[27]. Hivos contracted Penabulu to provide direct assistance to Common Room to improve their financial reporting systems. According to Common Room training provided by Penabulu and Hivos has helped improve the organisational management and structured the financial reporting resulting in better audit results.

As illustrated in the table in Chapter 5.1, one of the deliverables in Common Room's contract with Hivos included the creation of synergy with other Hivos partners in the assistance of local cultural bodies. There is no evidence that this occurred, but there is evidence of collaboration between Common Room, ELSAM and ICT Watch in the area of internet governance. Common Room joined 14 other organisations to sign the Declaration of Internet Freedom in 2012.

Hivos has decided to discontinue the partnership with Common Room in 2014. In its current programme Hivos seeks to support integrated, multi-actor initiatives. Common Room is less of a strategic choice for Hivos because it seeks to create more vibrancy by bringing together actors under common platforms.

# 6 Discussion

## 6.1 Design of the intervention

The interventions of Common Room between 2012 and 2014 were designed to develop a platform for expression and engagement with civil society through arts, culture and the use of technology Bandung's urban area[28]. Although Common Room has promoted the development of a progressive sub-culture amongst youth through the fusion of musical genres and the revival of Sundanese traditions, this has not yet led to larger influences in the creative industry or economy of Bandung. Karinding itself could well just be a temporary hype and there is little evidence to suggest that Common Room has tried to infuse principles of tolerance or human rights within its support to the emergence of these groups.

Policy advocacy was included as an activity in the 2012-2014 period, but no relevant actions were taken beyond 2012 that led to tangible results in the areas of arts promotion and creative economy reduction through forums and coalitions.

Besides the Karinding and underground metal groups, Common Room does not have specific target groups or a specialized area of expertise. With growing competition from other artistic platforms in the Bandung area, it is unclear what sets Common Room apart and how the organisation will sustain as an open platform to encourage interactions that promote pluralism and diversity. Common Room has not been sufficiently innovative and seems to have continued along with business as usual, which may well lead to future challenges if Karinding proves to be a temporary hype and given its less strategic location.

# 7 Conclusion

Common Room's interventions provided a platform for artists and musicians to collaborate and experiment with new forms of expression. The SPO laid the foundations for the emergence of a new sub-culture in Bandung. This is an important change because it has brought more marginalized music traditions and groups to the forefront and in public view. The revival of Karinding, a unique Sundanese instrument, and its fusion with the underground metal scene have benefitted both music genres and generated a greater appreciation amongst the general public and the local government.

Unfortunately, Common Room as an organisation was unable to bring about or influence policies and practices of the local government directly. Although they have successfully garnered public sector financial support and have been engaged to provide technical assistance and policy inputs, there was no evidence of significant influence in this regard. Common Room, together with a host of CSOs in Bandung did however manage to successfully convince the city government to preserve a city forest. But this is a result of campaign efforts that have been going on since the early 2000s, with Common Room providing support to the movement.

The organisational performance of Common Room has not improved in the way the SPO and Hivos had intended. Events, workshops, classes and other activities hosted by Common Room have been more diverse but have been unable to attract more participation and attendance. Only Karinding groups, or artist collaborations that are related to Karinding, have benefitted significantly from Common Room's support. Common Room has not been able to sufficiently identify who its target groups are, other than Karinding and the underground metal community.

The organisation had to face a tough decision in 2012 to move locations to a less central and less attractive space. This has resulted in fewer individual artists and other creative collectives utilizing Common Room. Common Room has coped with this situation by collaborating with other actors, like the disaster risk reduction forum, who are less relevant to the organisation's mission and vision. Internally, Common Room has also been unable to diversify its leadership and staffing structures.

Nonetheless, the outcome achieved with regards to Karinding's current niche in Bandung's youth culture is relevant in that it offers a non-mainstream and alternative form of expression. The achievement is relevant to the context of Bandung, which is known for its creative industry but where art and cultural forms are often commercialized.

Table 7

*Summary of findings.*

| When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements? | Score |
|---|---|
| The CS interventions were well designed | 5 |
| The CS interventions were implemented as designed | 5 |
| The CS interventions reached their objectives | 5 |
| The observed outcomes are attributable to the CS interventions | 6 |
| The observed CS outcomes are relevant to the beneficiaries of the SPO | 5 |

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

# Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration
- 1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

| Dimension | | Indicators | Question | Change |
|---|---|---|---|---|
| Civic engagement | 1 | Needs of marginalised groups | How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies? | -1 |
| | 2 | Involvement of target groups | What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities? | 0 |
| | 3 | Political engagement | How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups? | +1 |
| | | | | |
| Level of organisation | 5 | Relations with other organisations | In the past 12 months what has been the most intensive interaction you had with other CSOs? | -1 |
| | 5 | Frequency of dialogue with closest CSO | In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with? | 0 |
| | 6 | Defending the interests of marginalised groups | Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs? | +1 |
| | 7 | Composition current financial resource base | How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking? | -1 |
| | | | | |
| Practice of Values | 8 | Downward accountability | To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them? | 0 |
| | 9 | Composition of social organs | What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for? | +1 |
| | 10 | External financial auditing | How regularly is your organisation audited externally? | 0 |
| | | | | |
| Perception of impact | 11 | Client satisfaction | What are the most important concerns of your target groups? How do your services take into account those important concerns? | -1 |
| | 12 | Civil society impact. | In the past 12 months, what impact did you have on building a strong civil society? | +1 |
| | 13 | Relation with public sector organisations. | In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives? | +1 |
| | 14 | Relation with private sector organisations | In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective? | 0 |
| | 15 | Influence upon public policies, rules, regulations | How successful have you been in influencing public policies and practices in the past 2 years? | +1 |

| | | | | |
|---|---|---|---|---|
| | 16 | Influence upon private sector agencies' policies, rules, regulations. | How successful have you been in influencing private sector policies and practices in the past 2 years? | 0 |
| | | | | |
| CS context | 17 | Coping strategies | In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society. | -1 |

# Appendix 2 Changes in civil society indicators between 2012 and 2014

## 1. Civic Engagement

### 1.1. Needs of marginalised groups SPO

Common Room has been used as a space to share knowledge, exchange ideas, network and for actualizing expression and appreciation. On several occasions, Common Room was used as an incubation space for the exploration and development of potential creative ideas, including the development of discourses in the art and cultural arena, as well as developing knowledge and skills of individuals or groups.

From 2011 and 2013 the following activities took place in Common Room (see Appendix 5 for more details):

- 2011: 175 activities, 11 categories, 8 themes, 3,556 participants (24% women), 75% on a local scale;
- 2012: 110 activities, 8 categories, 8 themes, 2,020 participants (36% women), 86% on a local scale;
- 2013: 166 activities, 15 categories, 12 themes, 2,052 participants (30% women), 80% on a local scale;
- 2014 (up until June): 107 activities, 9 categories, 9 themes, 1,275 participants (28% women), 93% on a local scale

As illustrated above, there has been a decline in the number of participants and activities in 2013, when compared to the values in 2011. It can be concluded that Common Room has engaged fewer people between 2011 and 2013. Based on the increase in the number of categories and themes it is suffice to say that Common Room has served people with more diverse backgrounds or interests. However, there has not been a significant improvement in the number of female participants and it is not clear whether the participants were marginalised groups or not.

From the reports, the evaluation team also observed that the number of groups and organisations benefitting from Common Room's assistance varied slightly from year to year. In 2011, there were 42; in 2012 23; in 2013 28, and; in 2014 28. When the situation in 2014 is compared to the 2012 baseline situation, there has been a slight increase in the number of beneficiary groups. There has however been a larger increase in the number of traditional music groups supported, from just eight in 2011 to 17 in 2014.

Common Room has supported 'marginal' forms of art such as Karinding and the underground metal scene. Individual artists and groups in these genres are not part of the mainstream market, and in a sense is part of a 'counter-culture'. Through Common Room's support, these musical art forms have become less marginal in terms of public attention and appreciation.

### 1.2. Involvement of target groups SPO

It is hard to determine the change in Common Room's target group involvement since the SPO has a vague definition of its target group (see section 5.1). However, if Karinding music groups are presumed to be Common Room's most prominent target group, then it does seem as though Common Room has given more space for them to plan, organize, or evaluate their own activities with little intervention. Common Room does take into account the needs of its target groups, specifically for the use of its space and facilities. Common Room activities can be said to have been planned according to the requests of its target groups. However, there is no evidence that target groups have been involved

in Common Room's long-term planning and organisational evaluation. Overall, there is no change in this indicator compared to baseline.

### 1.3. Intensity of political engagement SPO

Common Room has sought to benefit from the close personal relationship between its director and the Bandung and West Java government leadership. They rely on this personal relationship to garner support and to conduct lobby and advocacy. As such, changes in the government leadership of Bandung or West Java will potentially affect Common Room's relationship with the public sector. In 2013, Ridwan Kamil assumed the office of Bandung's mayor. Common Room is known to have a good relation with him, and Kamil is also a member of the Bandung Creative City Forum (BCCF), a Common Room-affiliated organisation. Although there is no clear evidence, Common Room may have benefited from this as there are improvements in Indicators 4.3 and 4.5. Despite receiving financial backing from the government and supporting the mayor of Bandung, Common Room has remained critical of the lack of government support for the creative industry in the region[29].

Apart from Common Room's political engagement via lobby and advocacy, they also seek to communicate political messages through target groups' artistic expression. For example, some of the lyrics of Karinding Attack criticize power-hungry politicians[30].

## 2. Level of Organisation

### 2.1. Relations with other organisations SPO

Common Room currently perceives its closest relationship to be withthe following groups or CSOs: Bandung's Disaster Risk Reduction Forum (Forum PRB), *Komunitas Anak Bertanya*, Moedomo Learning Initiatives, the Indonesia Art Coalition (*Koalisi Seni Indonesia*), Bandung Creative City Forum (BCCF), and Karinding groups. Only the latter two were mentioned during baseline, while the likes of Openlabs, Bandung Oral History, Ruangrupa, are no longer mentioned. Common Room's management explained that this change is a result of missing features of Common Room's current location or building (see 5.1). But the change also signifies that Common Room is identifying more with youth groups and less with traditional contemporary art groups.

### 2.2. Frequency of dialogue with closest civil society organisation SPO

Apart from Karinding groups and Ujungberung Rebels, the CSOs and art groups with whom Common Room most frequently works with have changed since the baseline. Common Room no longer reported to have frequent dialogue with the Bandung Creative City Forum, Rumah Cemara, and WALHI. During the end line, Common Room's management reported to have more frequent dialogue with Forum PRB, Moedomo Learning Initiative, and the Indonesia Art Coalition. The frequency of this dialogue ranged from weekly informal meetings to regular monthly or biannual meetings. According to Common Room's management team the nature or intensity of these relations are no different from the baseline.

### 2.3. Defending the interests of marginalised groups SPO

Although Common Room has a vague definition of target groups, some of the groups that have benefitted from Common Rooms interventions can be considered to be marginalized. These marginalized groups include those pursuing alternative cultural and artistic aspirations. While generally

Oris Riswan Budiana, "FPB Mainkan Karinding Sindir Pemkot Soal Baksil", *detikNews*, 29 July 2011. Available from http://news.detik.com/bandung/read/2011/07/29/112602/1692128/486/fpb-mainkan-karinding-sindir-pemkot-soal-baksil (accessed 11 December 2014)

being side-lined politically and with little supporting infrastructure, a number of these groups are unique in the position they occupy in society. Underground metal groups tend have a negative public image, especially amongst more hard-line religious communities[31]. After an incident where 11 youth were killed during a concert in 2008, the space provided to underground metal groups was very limited. Similarly, Karinding was nearly non-existent as a traditional music instrument, with only a handful of artists mastering the instrument. The instrument was less known to people in Bandung, and was only performed in some ceremonies[32]. Karinding also represented a marginalised Sundanese custom in the urban sphere of Bandung, which was dominated by hard-line religious interpretations[33]and a 'westernized' urban sub-culture[34].

Box 1: Karinding

Karinding is a Sundanese traditional musical instrument from West Java and Banten, Indonesia. It is usually made from bamboo and palm trees. Karinding made of palm tree is traditionally used by male players, and bamboo instruments are used by female players. To play Karinding, one places the instrument between one's lips, and one end is beaten by a finger to create vibrations. The rhythm of Karinding music is determined by the movement of the tongue and lips. The sound of Karinding is said to be similar to a frog. (source: Wikipedia)

Karinding Attack, is said to have been the result of Common Room's innovation to combine two marginalized forms of music: underground metal and Karinding. With Common Room's artistic and promotional support, and due to the popularity of the personnel amongst the underground metal community, Karinding Attack has gained popularity since the baseline. The group is now considered to be an icon[35]given the emergence of a new contemporary sub-culture which is modern yet seeks to connect to Sundanese cultural roots. The band has been performing in many occasions throughout the country, as well as abroad[36], received wide media coverage[37], and has gone 'viral' among young audiences in Bandung[38]. Karinding Attack has made impact in the societal landscape and has reduced the negative stigmas often associated with underground metal bands[39], while at the same time promoting a distinct Sundanese customary identity. As such, the underground metal community and Sundanese custom community have become more accepted by the general public and there is now space for the two to coexist[40].

## 2.4. Composition financial resource base SPO

From Common Room's records there are observable changes in the SPO's income (in terms of funding) and expenditures over the past four years:

Table 14

*Overview of Common Room's income and expenditure 2010-2013*

| Year | Income (IDR) | Expenditure (IDR) | | | | | Difference (IDR) |
|---|---|---|---|---|---|---|---|
| | | Total | % non-institutional expenditures | % institutional | % assets | % auditor fees | |
| 2009 | 390,706,000 | 116,357,213 | 57 | 31 | 12 | - | 274,348,787 |
| 2010 | 390,706,000 | 442,070,648 | 63 | 36 | 1 | - | -51,364,648 |
| 2011 | 197,039,430.30 | 248,853,469 | 32 | 58 | 2 | 8 | -51,814,038.70 |
| 2012 | 535,691,100 | 395,292,635 | 31 | 59 | 2 | 8 | 140,398,465 |
| 2013 | 288,386,477 | 332,719,800 | 51 | 38 | - | 10 | -44,333,323 |
| 2014 | No data | | | | | | |

Source: Statistik Kegiatan 2009-2013, Common Room

The table above indicates that the SPO's income in 2013 was lower than that in 2010 and during the baseline in 2012, but higher than in 2011. The expenditures exceed the incomes for all years, except for 2012 and 2009. Non-institutional expenses (defined as program costs and media tools) in 2011and 2013 were lower than the institutional expenses (defined as employee salaries and office costs). This could indicate issues in the financial health of Common Room, although there is insufficient information to draw this conclusion.

Common Room's financial resource base has been decreasing over the past five years.

Table 15

*Common Room Income Contributors 2009-2013*

| Year | Total income | Funding Source | % of contribution |
|---|---|---|---|
| 2009 | 390,706,000 | Hivos<br>Bandung Creative City Forum<br>YES CLUB<br>CCF Bandung<br>Others | 72<br>6<br>5<br>3<br>14 |
| 2010 | 390,706,000 | Hivos<br>ASEF<br>Japan Foundation<br>CCF Bandung<br>YES CLUB<br>Goethe Institute Jakarta<br>Erasmus Huis<br>Others | 47<br>25<br>17<br>5<br>2<br>2<br>1<br>4 |
| 2011 | 197,039,430.30 | Hivos<br>Dinas KUKM Bandung City<br>ASEF<br>Others | 75<br>16<br>5<br>4 |
| 2012 | 535,691,100 | Hivos<br>City government<br>Others | 58<br>39<br>3 |
| 2013 | 288,386,477 | Hivos<br>Ministry for Tourism & Creative Economy<br>Others | 53<br>44<br>3 |

Source: Statistik Kegiatan 2009-2013, Common Room

Although Common Room is less dependent on Hivos, as seen from the decrease is Hivos' overall contribution between 2011 and 2013, there is less diversity in funding sources since 2011. Prior to 2011, Common Room was able to attract other sources of funding. Of notes is that in 2013, the Ministry for Tourism and Creative Economy provided Common Room with a consultancy fee for their services provided to the cultural centre revitalization project conducted in early 2012 (See 4.3 and 4.5). This was different from the funding provided through the Bandung City government in 2012, which Common Room was able to manage with greater flexibility.

# 3. Practice of Values

## 3.1. Downward accountability SPO

There is no significant change in Common Room's downward accountability, as Common Room's structure has not changed much. The board receives reports from the SPO's executive arm on an annual basis and only holds meetings when necessary. However, the management team reported that they have been improving their reporting quality and have a better organisational policy in place through developing standard operational procedures and financial procedures. The evaluation team, however, did not proceed with asking for evidence of this since Common Room is basically still a 'one-man show'. Common Room presently only consists of a director, a finance staff, and an administration staff[41]. With such minimum personnel, improved procedures or policies would not be very relevant to the organisation's overall accountability. Also of note is that the 2013 financial income figures show that institutional expenses are far higher than program expenses, which is considered a less healthy organisational practice, especially considering that the number of beneficiaries dropped in 2013.

## 3.2. Composition of social organs SPO

During the baseline in 2012, the evaluation team found that none of the board members represented the SPO's target groups. Common Room has taken the findings of the MFS-II baseline into account and has subsequently appointed an additional board member from a Karinding group they support[42]. As noted in the previous section, the executive of SPO now only consists of three staff. There has been no regeneration of staff members, and the director still controls all affairs and organisational direction.

## 3.3. External financial auditing SPO

Common Room has used Hivos funds to conduct external organisational audits for the financial year of 2011 in May 2012. They also claim to have allocated a budget to conduct audits for the financial years 2012 and 2013 (see table in 2.4), but the evaluation team did not receive copies of the financial audit reports for these years.

# 4. Perception of Impact

## 4.1. Client satisfaction SPO

The SPO does not measure client satisfaction, nor does it have staff with dedicated monitoring functions. The evaluation team was nonetheless able to draw a number of conclusions with regards to client satisfaction based on findings during the evaluation workshop and a review of documents and reports.

As previously noted, Common Room moved locations in 2012. Some missing features of the current space Common Room occupies (gallery, residency, attractive gathering space) have caused a decrease in the range and quality of services provided. As a result, some groups are no longer active in Common Room[43]. Common Room has responded to this situation by offering its services to different (but less relevant) groups and organisations, like the Disaster Risk Reduction Forum of Bandung.

Common Room's overall utilization has not decreased, but individual artists and non-Karinding bands no longer utilized Common Room's facilities in 2014.

[41] Common Room, "Profile (Bahasa Indonesia)". Available from http://commonroom.info/about/ (accessed 11 December 2014)
[42] Kharisma Prasetyo, "Evaluation Workshop Common Room", MFS-II evaluation 2014
[43] Ibid

Table 16

*Common Room beneficiaries and groups utilizing facilities*

| Year | # of individual artists | # of music bands | # of artist communities, government agencies, NGOs/CSOs, media, & others | Subtotal |
|---|---|---|---|---|
| 2011 | 9 | 8 | 42 | 59 |
| 2012 | 17 | 7 | 23 | 47 |
| 2013 | 8 | 14 | 28 | 50 |
| 2014 | 0 | 17 (16 of which Karinding) | 28 | 45 |

Source: Common Room records of beneficiaries 2011, 2012, 2013 & 2014

Not all target groups were less satisfied with Common Room despite the reduced facilities. Karinding groups are more satisfied with Common Room over the past two years due to the SPO's assistance in improving their artistic capabilities, which are important for developing the groups' identities[44].Karinding groups, more common on the outskirts of the city, also benefit from materials Common Room has developed for the music class, which they have been able to utilize without having to depend on Common Room or Karinding Attack[45]. Karinding groups have also received more support and acknowledgement from Bandung and West Java government (see 4.5).

The evaluation team also interviewed another artistic community/group benefiting from Common Room's support, Illuminator, a community of illustrators in the metal music industry. Illuminator also reported that they have been satisfied with Common Room for the space provided for drawing classes, and especially in linking them with the metal and Karinding communities. Illuminator now has better collaborative relationships with music groups and bands, producing themed designs for merchandise items such as t-shirts, stickers, tote bags, and hoodies.

## 4.2. Civil society impact SPO

The main civil society impact of Common Room has been its facilitation in the emergence of a new sub-culture. Karinding has become a new hype among urban youth in Bandung, with the following evidence:

- Increased demand for Karinding performances[46];
- Artists have begun to combine Karinding with other music genres, such as blues[47];
- Karinding classes, facilitated by Common Room and the government, currently have 40 members and have resulted in the emergence of 8 new bands[48];
- Before Karinding Attack was formed, there was a growing Karinding trend, but performances were still limited to exclusive audiences[49]. Karinding Attack believes that without Common Room's intervention, Karinding would not be as popular as it is now[50]
- The emergence of a trend among youth in Bandung to bring their Karinding instruments everywhere, wearing *iket* –traditional headbands, to show their identity as part of Karinding groups and to socialize with individuals with the same interests[51];
- Although spells and mantras and burning incenses are often considered to violate Islamic rules, it has become an integral part of Karinding group performances[52].

[50] Interview with Man Jasad, leader of Karinding Attack band, Bandung, 12 September 2014

[51] Kharisma Prasetyo, "Evaluation Workshop Common Room", MFS-II evaluation

As mentioned in 2.3, the popularity of Karinding has benefitted the underground metal scene as well as the Sundanese customary community. For the Sundanese customary community, Karinding Attack is regarded as a successful example of how to cope with urbanity. From the perspective of underground metal groups, Karinding has helped them promote an alternative outlook for their community which has in the past been labelled as antisocial, westernized, and heretic[53].The growing popularity of Karinding, from what used to be considered an old-fashioned instrument into a new trend among urban youth, is seen as an achievement for urban groups whose identity has been marginalised by the hegemonic culture. However, from another perspective, it could also been viewed as a commodification[54] which could be described as unauthentic and market-driven[55].

On an annual basis, Common Room has been organizing the Nu-Substance festival since 2007. Hivos supported the 2012 and 2013 Nu-Substance urban art and culture festivals. In 2012 the theme of the festival was 'contested space' and in 2013 the festival had the theme 're-connection'. Unfortunately, there is no documentation available showing the level of public interest and participation that the festival drew in each of the years. During the festival seminars, discussions, concerts, exhibitions, workshops and other events were held with the aim of stimulating creativity in Bandung and analysing social and cultural issues that exist in the city[56]. According to external resources, the festival takes on an "experimental and/or scholarly perspective" to the creative industry[57]. There is insufficient information to draw conclusions on the impact the festivals have had on the general public or on stimulating creativity of civil society.

## 4.3. Relation with public sector organisations SPO

Within the 2011-2014 period, Common Room related with the public sector through a number of activities. Common Room was a member of a number of coalitions and forums that engaged with public sector organisations. These included:

- Koalisi Seni Indonesia (Indonesia Art Coalition) through which Common Room lobbied the parliament to push government to issue regulations for art incentives;
- The Disaster Risk Reduction Forum(Forum PRB) which lobbied for the West Java provincial government to recognize the role of the multi-stakeholder forum in supporting risk reduction interventions;
- As part of BCCF, Common Room played a crucial role in providing inputs to the creative economy policy of the local government[58].

In 2012, Common Room was granted Social Aid Funds (Dana Bansos) by the Bandung city government. Due to limitations set by the Ministry of Home Affairs (Regulation No. 32/2011 on Guidelines for Dana Bansos), organisations like Common Room are unable to access such grants more than once. In addition, Dana Bansos is known for being largely misused and corrupted[59]. The former Bandung mayor, who was in charge when Common Room received the funds, has been under investigation over bribery charges related to Dana Bansos handled under his administration[60]. The fact

that Common Room was selected as a grantee has left the SPO with a negative experience and a feeling of disappointment. Nonetheless, Common Room continued to collaborate with the local government through other initiatives.

In 2012, Common Room also cooperated with the West Java Provincial Development Planning Agency (Bappeda, specifically Pusdalisbang) to develop an academic paper entitled, 'Utilization of Natural Resources and Local Culture for the Development of Ecotourism Destinations and Creative Economy'. In the same year, Common Room worked with the Ministry of Tourism and Creative Economy on the revitalization of cultural centres (Taman Budaya) around Indonesia. The Ministry had appointed Common Room to provide technical advice on the revitalization initiative. During the evaluation workshop, Common Room's director expressed this cooperation was an unpleasant experience due to complicated payment issues and the precedent that such a consultancy assignment was merely a formality for the government, who needed to fulfil certain aspects of their program intervention.

Based on description above and the baseline report, it can be concluded that overall Common Room had more relations with the public sector since 2012. Findings under indicator 2.4 also support this conclusion.

## 4.4. Relation with private sector agencies SPO

Common Room does have regular or intensive relations with private sector agencies except for event sponsorships and a number of beneficiaries coming from the private sector. As such, there is no significant change from the conditions found during the baseline.

Larger private sector beneficiaries utilized Common Room's space and collaborated in different ways with Common Room in the 2012-2014 period: These included media (Engage Media & TV One), an event organizer (Atap Organizer), and a digital entertainment company (Tinker Games).

## 4.5. Influence upon public policies, rules, regulations SPO

While Common Room'slobby with Forum PRB, BCCF, and Koalisi Seni Indonesia has not yielded in tangible results; the collaboration with Bappeda and the Committee for Creative Economy of West Java resulted in the production of two policy recommendations documents. The first is a study of the development of eco-tourism destinations in 16 districts/cities of West Java. The second is on creative economic policy recommendations. Both documents became reference materials for the Regional Mid-Term Development Plan (RPJMD) in 2013. However, there is no clear evidence that the RPJMD 2013 significantly accommodated recommendations produced by Common Room.

With regards to Common Room's services provided to the Ministry of Tourism and Creative Economy in 2012 on the revitalization of cultural centres, Common Room is pessimistic of their influence. They are under the impression that the project was largely ineffective, as the Ministry has not brought Common Room's inputs into practice[61]. Design it Yourself (DIY) - a group that organizes annual design conferences from artistic communities, small businesses and academia in Surabaya – expressed that Common Room did have an influence. The group was thankful to Common Room for involving them in a national workshop[62]. As such, it seems that the interventions led by the Ministry may have actually adopted some of the material developed by Common Room, but that their policies are nonetheless rather abstract and without clear plans.

From 2011 to 2013, Common Room together with other CSOs (Aliansi Jurnalis Indonesia, Aliansi Keluarga Sunda Nusantara, Forum Diskusi Hukum Bandung, Lembaga Bantuan Hukum Bandung, Walhi, BCCF, etc.) and universities lobbied the government to withdraw their decision in authorizing a corporation (PT. Esa Gemilang Indah) to manage and change the designation of Babakan Siliwangi, Bandung's city forest[63]. This is also an example of successful collaboration with other CSOs to

[61] Kharisma Prasetyo, "Evaluation Workshop Common Room", MFS-II evaluation 2014

[63] Gustaff, "Isu Alih Fungsi Babakan Siliwangi Kembali Memanas", *Save Babakan Siliwangi City Park*, 1 February 2013. Available from http://savebabakansiliwangi.wordpress.com/page/3/ (accessed 11 December 2014)

influence public policy. There is no indication however that Hivos funding contributed directly to this achievement. In fact, Common Room and other organisations began lobbying efforts for the preservation of Babakan Siliwangi and pressing their case against the conversion of the area into a business district since 2002.

Box 2: 'Save Babakan Siliwangi City Park' campaign

In June 2013, the Bandung Government revoked a building permit granted to PT Esa Gemilang Indah. The company had planned to set up a restaurant in the city park area of Babakan Siliwangi. The retraction of the permit was considered a victory for several groups in Bandung, including environmental activists, lawyers, concerned citizens and CSOs, who had voiced their concerns over plans that threatened to encroach on the city's open green space since 2002[64].

In 2008, the coalition of concerned organisations and citizens had begun to raise money for a campaign and disseminate petitions against the commercialization and privatization of the area[65].

This campaign continued until 2013 by the Concerned Citizen Forum for Babakan Siliwangi (FWPBS), with protests expressed through art performances, demonstrations, more petitions and discussions, as well as hearings, with the city government. FWPBS gathered some 7,000 petition signatures and was supported by initiatives from a range a host of CSOs, including Common Room.[66]

Last, Karinding groups have perceived that improved support and acknowledgement from the government within the past four years has stemmed from Common Room's support. In 2011, the city government provided a public building space (Gedung Indonesia Menggugat) to groups to be used free of charge for Karinding classes[67]. In addition, the provincial government has since included the Karinding instrument in exhibitions and local craft product fairs[68].

## 4.5. Influence upon private sector agencies' policies, rules, regulations SPO

Although the private sector has little relevance to or relations with Common Room, the evaluation team noted that there has been an increased demand for Karinding music instruments, as well as accompanying instruments, and apparel products as a result of the new Karinding trend (see Indicator 4.2). Karinding Attack believes that bamboo craft producers are benefiting from this growing demand for their products[69]; a justified opinion from evaluation team's observations. In part, this seems to have been an intended result of Common Room since the SPO actually began actively promoting Karinding in 2008[70].

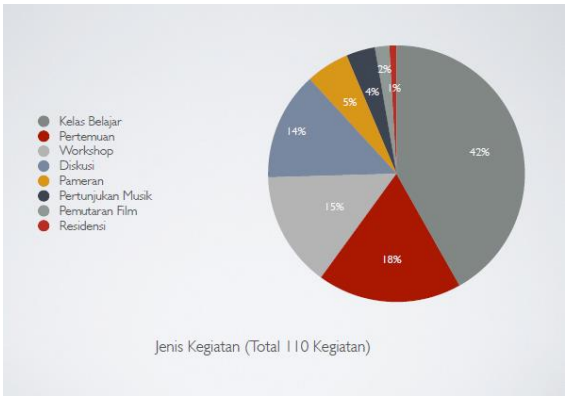
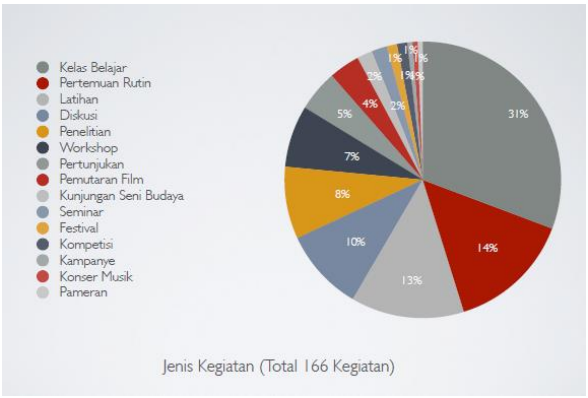
# 5. Civil Society context

## 5.1. Coping strategies



During the baseline in mid-2012, Common Room was in process of moving to its current location. While the SPO took its time to find a new location and move, their relocation had a number of drawbacks. The new location is less central than before, with no gallery or exhibition spaces. Located in a residential area, there is a low noise tolerance and the space Common Room now occupies is less attractive.



Between 2011 and 2012, Common Room received€ 54,000 from Hivos and was able to save office/building rental, which was basically free of charge. With just € 35,000 in funding support from Hivos in the 2012-2013 period, Common Room had to cope with additional rental costs, allocating 20 percent of the budget to this. In addition to their growing financial woes, Common Room was unable to apply for more Social Aid Funding from the Bandung city government, which in 2011 had constituted 39 percent of their total budget.

Common Room have tried to cope with these problems by widening their range of supported target groups. However, this may have added to their existing problems of having vaguely defined target groups. With ill-defined target groups, a lack of focus and a majority of funding going towards institutional support and non-programmatic costs, Common Room is losing its strategic position. The organisation relies very heavily on its director for strategic direction and has not been able to be effective enough or innovative in the way they plan their activities and seek out additional support to sustain interventions.

Report CDI-15-061

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

SURVEY - MEASUREMENT - TRAINING - RESEARCH

Klaver, D.C., Smidt H., Nugroho, K., Prasetya, K. S., February 2015, *Combine Resource Institute (CRI) end line report; MFS II country evaluations, Civil Society component,* Centre for Development Innovation, Wageningen UR (University & Research centre) and SurveyMETER. Report CDI-15-064. Wageningen.

This report describes the findings of the end line assessment of Combine Resource Institute (CRI) in Indonesia that that is a partner of Hivos.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses CRI's contribution towards strengthening Civil Society in Indonesia and for this exercise it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which CRI contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain CRI's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

# 1 Introduction

This report presents the civil society end line findings of Combine Resource Institute (CRI), a partner of Hivos in Indonesia under the Dutch Consortium People Unlimited. It is a follow-up to the baseline assessment carried out in 2012. According to the information provided during the baseline study, Combine Resource Institute is working on the theme 'governance'.

These findings are part of the overall joint MFS II evaluations carried out to account for results of MFS II-funded or co-funded development interventions implemented by Dutch Co-Funding Agencies (CFAs) and/or their Southern Partner Organisations (SPO). They are also intended to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact, and context influencing agency by civil society in general) has been used to orient the evaluation methodology.

*Changes in the civil society arena of the SPO*
In the 2012 – 2014 period the two most important changes that took place in the civil society arena of the SPO are related to 'level of organisation' and 'perception of impact'.

With regards to 'level of organisation' CRI did not further expand its 2012 network, but it intensified its collaboration with the Indonesian Community Radio Network, which is an emanation of CRI. The division of roles became clearer and both organisations joined efforts to implement a National Program for Community Empowerment (PNPM) Support Facility-funded project which engages community radios in monitoring this government's program and to work towards the revision of the Broadcasting Law. CRI has sustained its resource base after Hivos withdrew in March 2014.

With regards to 'perception of impact' both progress has been made on the performance of Suara Komunitas (SK), a web-based citizen journalism platform, and on the collaboration with local governments.

Between 2012 and 2014, the number of contributors to SK has increased from 665 to 856 entities including community radios. In the same period the number of articles per contributor increased from 4 in 2012 to 5 in 2013, whereas the number of readers increased with 7 percent.

The capacity of the community radios to defend the interests of their listeners is said to have improved, however they and SK are not (yet) capable to engage in lobby and advocacy activities and to follow up on issues that are escalating on the online website.

The most important relation that CRI has had with the public sector in the 2012 -2014 period consists of the further implementation of the Village Information System in more than 200 villages. These systems are expected to improve the transparency at village level and encourage citizens to claim their rights in the near future.

These findings were obtained through an analysis of documents, a workshop with the SPO, and several interviews. These interviews were conducted with: CRI; external resources persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons with knowledge of the MDG or theme on which the SPO is concentrating.

*Attribution question*
Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. Combine Resource Institute was selected for a quick assessment.

The first outcome that we looked at was the increasing participation of CRI's intermediate organisations in a web-based citizen journalism platform, known as *Suara Komunitas* (SK), as demonstrated by the increasing number of new contributors, articles produced, and website visitors. Such changes are important as they reflect an improved level of organisation among intermediate organisations, as the citizen journalism platform allows them to produce, share, and reflect upon information of grassroots interest. The pathway that most likely explains this outcome is the presence of a supporting network of several organisations including CRI to strengthen their capacity and critical interest. The existence of the online platform and a general trend that people have increasingly access to the internet are conditions to achieve the outcome. CRI's contribution consists of providing and maintaining the citizen-journalism website, and working through the network to mobilize and increase the capacity of community radios to participate in such a platform.

The second outcome that we looked at was the Ministry of Health's willingness to validate beneficiary data and emend the issuance of health insurance as stipulated in a letter issued by the government (Ministry of Health Letter No.149/2013 on Jamkesmas Participation). In response to CSO actors' actions, which entailed collecting and disseminating information on the issue, the validation of beneficiaries is important evidence that these actions impacted public sector practices. However, it seems that in this case there is more evidence to suggest that these changes occurred as a result of the interventions from a coalition of government and CSO actors rather than CRI's actions that entailed supporting the escalation of the issue to enforce public pressure and demand. Although CRI also claimed to have facilitated the coalition, there is no evidence that the coalition would not be effective without CRI's support.

*Relevance*
Interviews with staff of CRI, with external resource persons, with the liaison officer of Hivos, as well as contextual information helped to assess the relevance of CRI's interventions in terms of: its Theory of Change (ToC) for Civil Society (CS) as designed during the baseline study; the context in which CRI is operating; the CS policies of Hivos.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because each represents one of the ToC's two major preconditions (critical engagement and quality policy).

With regards to the context in which CRI is operating, its interventions and outcomes achieved are relevant because it provided measures for more civil society actors to use, produce, and share information relevant to grassroots communities to defend their interests, and by doing so were able to improve public sector delivery of services as one example of successful impact.

With regards to the CS policies of Hivos, CRI's interventions and outcomes are relevant because they are in line with Hivos' direction regarding the strategic use of information and communications technology (ICT). Hivos sees this as a shared area of interest with CRI: both seeking to encourage the use of ICT, as a creative and innovative response to development issues.

*Explaining factors*
The information relates to factors that explain the changes in CS, CRI's contribution to these changes, and the relevance of its interventions. Information was collected simultaneously with data collection for the previous questions. Apart from searching for explaining factors related to these evaluation questions, the evaluation team was also informed about other important factors such as the organisational performance of CRI, relations with Hivos that might have had an effect on its performance or external factors.

The most important factors that explain the changes in the civil society dimensions are related to the context, which has laid the groundwork for these changes to be possible. First, since the political reformation in 1998, the government has normatively shown an increased political will toward improving public services. Nonetheless, the delivery of services is far from satisfying, further exasperated by the size of the nation and the devolution of power. Since the political transformations in the late nineties, many local NGOs emerged claiming a watchdog function. Indonesia has since joined the era of open information and the boom in ICT. Civil society organisations, like CRI and

others, have been able to capitalize on these changes by making use of, producing, and disseminating information. At the same time, the parliament and legislative are increasingly losing credibility as representatives of the people. This situation has put greater stakes and expectations on the civil society movement.

The second, CRI's contribution to changes in civil society, are explained by Hivos' continued support since 2005 to CRI's core programs, which have also been in line with CRI's ToC. Hivos has also supported both CRI's organisational development as well as its interventions in potentially politically sensitive matters.

The above findings also relate to factors of CRI's own internal organisational capacity and focus. High staff turnovers; obsolete strategic planning; and the absence of dedicated monitoring and evaluation personnel are examples of CRI' organisational capacity issues that need to be addressed. Their decision to take on the responsibility of developing the critical awareness of their target groups requires a large number of personnel to master many issues. The nature of CRI's role as a "network operator" means that they are privy to many demands from their network and intermediary organisations calling for their intervention, which may stretch their focus and resources. This has also led the organisation to explore new areas of programmatic work, such as disaster risk reduction, which may be to the expense of more core program areas.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the governance issues CRI is working on. Chapter 3 provides background information on CRI, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Free Press Unlimited. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in Appendix 2 in the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in Chapter 4. The answers to each of the evaluation questions are being presented in Chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in Chapter 6. Conclusions are presented in Chapter 7.

# 2 Context

This paragraph briefly describes the context Combine Resource Institution is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

## 2.1 Political context

Indonesia's political context changed drastically when Suharto's New Order regime came to an end in 1998 which opened the possibilities for civil society to start playing its role in society. This paragraph briefly describes the political contexts of the past decades, and ends with an overview of the most important recent changes.

### 2.1.1 Brief historical perspective

Indonesia's rise to being the world's third largest democratic nation has been lauded by many world leaders. The county is often considered to be a model Muslim democracy. As the fourth most populous nation with an estimated 250 million people[1], Indonesia has sustained its democratic commitment since transitioning from an authoritarian leadership to a democracy in 1998. The decentralized administration now consists of 34 provinces and 508 districts and municipalities.

Prior to 1998, Indonesia was under strict authoritarian regime. Suharto, known for his so-called New Order (1966-1998) regime, ushered in radical transformations that would place social and political forces under direct state supervision. The defining characteristics of the Suharto era were a focus on economic growth and controlled consensus and political stability devoid of dissent. A series of tumultuous economic and political transitions in the nineties severely diminished the credibility of ageing President Suharto, who was forced to resign amidst mass street protests.

His departure in 1998 laid bare three decades of social inequalities, state-perpetuated abuses against human rights, and a lack of civilian liberties. The regime change opened the way for a period of *Reformasi* started under the presidency of B. J. Habibie (1998-1999) and continued by Abdurrahman Wahid (1999–2001), Megawati Soekarnoputri (2001–2004), and Susilo Bambang Yudhoyono (2004–2014). Restrictions on citizen participation, press freedom and association were removed. Democratic reforms and decentralization led to direct elections, portioned authority, devolution of authority to regional authorities, formation of new political parties and ended the military's parliamentary influence. The distinct historical periods of the New Order Regime and *Reformasi* (1998-present) have shaped the emergence of civil society. Defining characteristics are summarized in the table below.

Table 1
*Characteristics that have defined the emergence of civil society in Indonesia*

| Characteristics | New Order, authoritarian period (1966 – 1998) | Reformasi (1998 – present) |
|---|---|---|
| **Political system** | Centralized, authoritarian characterized by unipolarity. Golkar as the dominant political party.<br><br>In 1999, there were 27 provinces, 306 districts | Decentralized, democratic. Fragmentation of power and atomization of patronage relationships. Emergence of numerous political parties. Direct presidential elections since 1999.<br><br>Decentralization altered the political and administrative landscape: 34 provinces, 410 |

[1] In 2010 the population was estimated to be around 237 million people (BPS 2010 Population Census). The current figure is an estimate from BKKBN and similar figures are cited in the CIA's World Fact Book and the World Bank.

| | | |
|---|---|---|
| | and around 60,000 villages. | districts, 98 municipalities, 6,944 sub-districts and 81,253[2]. |
| **State-citizen interaction** | Benevolent leader, obedient population. Down to the village level, the state permeated society. | Modern political culture marked by diminishing hierarchy between the state and citizens, allowing for citizens to interact more freely. |
| **Citizen representation and voice** | Strict control of speech, expression and association.<br><br>CSOs and their networks largely "hiding behind the screen",operating under state surveillance. A period of growth occurred in 1995-98, as resistance was building. | Burgeoning of CSOs, pressure groups and NGOs following the political euphoria after Suharto's fall.<br><br>Indonesian CSOs began to establish new networks internationally. Up until the early 2000s the focus was on state-centrist issues. Later, issues that CSOs were tackling became more diverse, ranging from pluralism, poverty reduction to fulfilment of economic, social and cultural rights. |
| **Media** | No free press, censorship and state-control. Suharto had firm grasp over how to use print & broadcast medias to promote political ideologies. | More vibrant media environment, flourishing of media businesses albeit in control of 12 main conglomerates that are mostly profit-driven and often have political ties. |
| | Limited public and CS use and access to internet until mid-90s. | Twitter nation, widespread social media use. |
| | | Growing realization of the importance of media/free press as the fourth pillar of democracy. |
| **Artistic forms of expression** | Art and literary censorship conducted by the state. Art forms were a means to reinforce political order. | Greater freedom of the arts and cultural sectors. Organizations able to hold art events more freely. Freedom of expression a catchphrase amongst individuals and artistic groups, but challenged by more conservative members of society. |
| **Religious expression and organization** | Regime repressed religious groups, especially radical forms. | Emergence of religious groups seeking to restore Islamic values and defend Muslim values. |

With political reforms came greater freedom and space for civic engagement. In the *Reformasi* period, there was a remarkable increase in the number of civil society organizations, many of which were Islamic in character. In 2000, the Central Agency on Statistics (BPS) recorded around 70,000 registered organizations, compared to just 10,000 in 1996[3]. New groups sprung up with donors encouraging activists to establish NGOs they could fund. These organizations were eager to distance themselves from state and often took an anti-government stance. Proliferating CSOs and NGOs have taken advantage of decentralization and greater regional autonomy to engage in public affairs. Civil society and government relations have improved, although both sides remain sceptical of the others' intentions.

### 2.2.2 Recent trends in the political context

Indonesia is considered to be a story of democratic success, but it still struggles to realize the benefits of sustained and equitable economic growth. In the political context, the main challenges lie in governing such geographically vast and decentralized country, applying principles of good governance and the enormous task of reforming the country's bureaucracy.

Although, Indonesia's 'big bang' decentralization initiated at the turn of the century narrowed the gap between local government and citizens, it has also localized political power struggles. While the devolution of authorities relieved tensions between the central government and the regions, it has also created opportunities for corrupt and rent-seeking practices, at the local level. As indicated by Transparency International's corruption index scores, perceived corruption in Indonesia remains high.

*Transparency International's Global Corruption Barometer survey: Indonesia*

| Year | Corruption perceptions Index Score<br>*(0 perceived as highly corrupt and 100 perceived as clean)* | Rank |
|---|---|---|
| 2011 | 30 | 100/182 |
| 2012 | 32 | 118/174 |
| 2013 | 32 | 114/177 |

Source: Transparency International

In 2013, decentralization was taken a step further with the approval of the Village Law, intended to address weak governance arrangements and empower rural communities to participate politically. The new law could also lead to village elites distorting power relations and misusing government funding if not properly monitored.

Indonesia is still transitioning politically and many challenges lie ahead. According to the 2012 Indonesia Governance Index's Executive Report, "Indonesia is witnessing a paradox in its democracy. On one hand, a successful opening-up of civil liberty has led to the avalanche of democratic demands across the nation, however on the other hand, democratic institutions' are inadequately respond to those demands." Nonetheless, the Indonesian Governance Index, which focuses on measuring provincial governance, does show a general improvement in the performance of the government (political office) bureaucracy, civil society and economic society based on principles of participation, transparency, fairness, accountability, efficiency, and effectiveness between 2008 and 2012. Civil society scores improved the most significantly, while scores for bureaucracy rose slightly.[4]

Table 3

*Indonesia Governance Index: Average provincial scores*

| Arena | 2008 | 2012 |
|---|---|---|
| Government | 4.93 | 5.46 |
| Bureaucracy | 5.53 | 5.58 |
| Civil Society | 4.85 | 6.33 |
| Economic Society | 4.77 | 5.71 |

Source: http://www.kemitraan.or.id/igi

In the past decade, Indonesians have generally enjoyed a freedom to participate in the political process through a direct-election mechanism. However, in September 2014 lawmakers voted in favour of a bill reviving indirect elections of regional heads. The controversial vote provoked public outcry which saw peaceful protests and the public voicing their discontent through social media. In early October, just before the end of his term, president Yudhoyono issued a regulation in lieu of the law, effectively repealing the law until further judicial review.

The recent 2014 elections which marked the end of Yudhoyono's 10-year term, demonstrated that Indonesian voters are increasingly voting for popular figures irrespective of political party alliances. While practices of corruption, vote-buying and poor voter administration remained in the recent election, the public seems to have matured politically, indicated by the enormous interest in televised debates between the leading candidates. The appeal of the newly sworn in President Joko Widodo, popularly known as Jokowi, has come from his hands-on, man-of-the-people approach. As Jokowi begins his five-year term he will need to start addressing a myriad of challenges that include corruption, stagnant economic growth, and human rights concerns, particularly with respect to the rights to freedom of expression, peaceful assembly, and religious intolerance. If left unaddressed, these challenges could seriously undermine Indonesia's stability and democratic reforms.

[4] The IGI uses a scale of 1 (lowest) to 10 (highest). Data is available online through their website. Indonesia Governance Index, Data, "IGI Executive Report". Available from http://www.kemitraan.or.id/igi/index.php/data/publication/factsheet/275-igi-executive-report (accessed 25 October 2014)

## 2.2 Civil Society context issues with regards to governance theme

Several important changes took place during the 2011 and 2014 period. First, the global financial crisis and Indonesia's rise to a middle-income country led to a decrease in international donor funding. Development actors, including CSOs and NGOs, have to compete harder for funding. Some have been more successful than others in diversifying funding by turning to the private sector or private foundations. At the expense of past idealism, local NGOs are now more disposed to receiving funding sources which in the past may have been criticized as supporting neoliberalism.

Regulatory changes also affected the civil society arena positively and negatively. Amongst the more controversial laws to spark reaction was Law No. 17/2013 on Societal Organisations. In an open letter sent before the bill was enacted, CIVICUS said the law would undermine freedom of association and "prevent CSOs from working on sensitive topics related to good governance and democratic reform in the public interest"[5]. FORUM-ASIA deplored the repressive provisions in the law that "leave all groups vulnerable to attacks, undermining the hard-won democratic space that has been forged by civil society since the end of the New Order regime."[6]

Other laws passed that provoked criticism were the State Intelligence Law (October 2011) and the Social Conflict Law (April 2012). NGOs and media see these laws as imposing further restrictions on freedom of speech, potentially leading to the criminalization of human rights defenders and signifying a tightening of state control. Discriminatory content was also an issue in discussions on the Religious Harmony Bill in 2013, for which drafting was initiated in despite not being part of the planned National Legislative Program. Late in 2013, the House of Representatives came under fire again for its weak stance against religious intolerance when it re-endorsed a law that limits state-recognized religions to six.

The French NGO Reporters Without Borders published a report showing that Indonesia sank from position 117 in 2010 to 146 in 2011 with regards to press freedom: Increasing cases of intimidation, threat and violence (including kidnapping and killing) against journalists explain this decline. Other relevant trends related to media and journalism consist of the spread and penetration of internet and ICT technologies across the country expecting to rise to 33 percent by the end of 2013; the lack of widespread practical and professional journalism education; corruption affecting Indonesian media and journalism ethics[7].

# 3 CRI and its contribution to civil society/policy changes

## 3.1 Background of CRI

Community Based Information Network (Combine) started in 1999 as a program. In 2001, it became a resource institution. CRI's vision is to provide access to knowledge and resources to communities so that they are in a better position and have stronger relationships with the government and private sector.[8] CRI aims to achieve "civic literacy" or autonomous communities able to be part of decision-making processes, especially as a means to exercise control in the public sphere. In order to do that CRI encourages the community's capacity as a knowledge producer though practicing ICT and empowering community network.[9]

Between 2001 and 2004 CRI's efforts focused on creating community forums (*forum warga*) in several pilot areas. These forums became instruments for community-oriented problem solving. It was also in this period that CRI began to incorporate the use of ICTs in its work[10]. Community radio was introduced as a working tool in 2003, becoming a core of CRI's interventions[11]. CRI's services in those years ranged from providing resources, expertise, training, and research specifically related to information systems, community-based journalism, and community organising. In 2004, when community radio stations reached a significant number, CRI began their initiative to integrate and link the various stations with the help of internet which led to establishment of *Suara Komunitas* in 2008. This aided in increasing the flow of information by creating ICT platforms that helped hundreds of community radios in Indonesia interact and communicate to escalate issues. By doing this, CRI expects to engage strategic stakeholders, such as decision and policy-makers. In the plan for the 2012-2014 period, CRI intended to take another step forward by raising critical awareness of citizen journalism platforms ready for engagement with the public sector, providing them with ammunition to act (i.e. 'act upon information').[12]

Based out of Yogyakarta, CRI carries out interventions across the country relating to four main programs areas that seek to have the following impacts:

1. *Suara Komunitas* (Voice of the Community): Power of information is realized to encourage the settlement of grassroots, community issues. Suara Komunitas is an interactive online platform used to promote citizen journalism and information exchange;
2. *Pasar Komunitas (Community Market)*: Grassroots economic empowerment by means of the stimulation of information-based market transactions;
3. *Lumbung Komunitas (Community Barn)*: Local governance capacity improvement by means of setting up village database systems; and
4. *Tikus Darat (Information Communication Team for Emergency Situations)*: Disaster risk reduction (DRR) through the creation of a mitigation information network.

[12] Hivos, Intake form Combine Resource Institution

CRI's organisational staffing structure endured some changes in the 2012-2014 period. CRI currently has 34 staff members, 11 more than during the baseline, managing the four programs. It has a board of directors, consisting of a president and five members; an IT department; and a R&D department.

CRI has been a partner of Hivos since 2005-2006. Objectives of previous collaboration were to increase the diversity of information and knowledge produced by community, increasing the performance of CSOs in managing and sharing resources and knowledge, and improving the performance of small medium enterprises by developing product and market quality. The 2012-initiated collaboration supported through MFS II was the third formal cooperation between Hivos and CRI. It focused specifically on supporting CRI's Suara Komunitas (SK) program. Suara Komunitas' aim is to become a strategic medium in supporting advocacy for the fulfilment of basic rights of citizens. It focuses on strengthening the community radio stations in Indonesia via the strategic use of ICT to drive act upon information by relevant stakeholders. As such, the 2012-2013 Hivos program is named as 'Act Upon Information' [13].

Besides Hivos, CRI received funding support for SK from Ford Foundation and a multi-donor trust fund managed by the World Bank aimed to support the government's National Program for Community Empowerment (PNPM Support Facility).[14] Since its establishment CRI has collaborated with numerous development of funding agencies, including TIFA Foundation, World Bank, WWF, Indonesian Government Agency for Assessment and Application of Technology (BPPT), United States Agency for International Development (USAID), Department for International Development of the UK (DFID), and disaster risk reduction (DRR)-related partners like Japan International Cooperation Agency (JICA), Japan Social Development Fund (JSDF), CARE International, United Nations Development Programme (UNDP) and World Association of Community Radio Broadcasters (AMARC).

CRI cooperates with a host of other civil society organisations and platforms such as the Indonesian Community Radio Network, known locally as *Jaringan Radio Komunitas Indonesia* (JRKI); Fahmina and Institute Development and Economic Analysis (IDEA) in the area of advocacy, and; Air Putih, ICT Watch, Satu Dunia, and Relawan TIK (ICT Volunteers) on mainly ICT issues.

## 3.2 MFS II interventions related to Civil Society

Hivos supported CRI via a project named the 'Act Upon Information' in the 2012-2014 period, which specifically aimed to improve SK. By the end of 2013, SK counted 856 contributors, of which 307 were community radio actors. The SK website has been visited 169,390 times in 2013 onto which content produced by its contributors was uploaded. On average, some 368 articles and written pieces were uploaded each month. Contributions came from 60 districts in 20 provinces[15].

Through the project, CRI sought to facilitate community media in Indonesia to communicate more widely with strategic stakeholders by utilizing an online information and communication platform. CRI's target group included 287 community radio stations, linked in the *Suara Komunitas* network that was launched in 2008. The contract with Hivos specifically reinforced the SK program, aiming to support around 30 community radio stations located in six regions and 300 community journalists. Communities, radio stations, and women's cooperatives were the expected beneficiaries of the program.[16] In November 2012, an additional € 8,200 was provided for supplemental work aiming to influence the revision of Broadcasting Law No. 32/2002.[17]

To achieve this, CRI planned to conduct content analysis and dissemination; strengthen the capacity of community journalists and radio stations; expand *Suara Komunitas* membership; strengthen CSO

[16] Intake form Combine Resource Institution & Act Upon Information Proposal, Hivos
[17] "Memo Budget Amendment 1004708", Hivos, 2012

capacity in the ICT field; contribute to policy discussions on the revision of Indonesia's broadcasting law; and improve internal organisational development.[18]

Below are the deliverables (or performance indicators) that were agreed upon in CRI's contract with Hivos:[19]

1. The "act upon information" in the issues brought up by community media facilitated by CRI is established in at least two regions.
2. The capacity of 150 community journalists, editor, managing staff and the organizations of community media is improved in at least 30 community radio stations in six regions.
3. Expanding *Suara Komunitas* members in Lampung, West Sumatera, Southeast Sulawesi, North Sulawesi, southern part of West Java and Riau.
4. *Sanggar MeTIK* established itself as the medium to learn about ICT for civil society organizations.
5. Ability of Hivos' partners (SETARA women's cooperation and Women in Small Business Network or Jarpuk in Bantul) on the use of ICT has increased.
6. Improved internal organizational development, specifically in internal mechanism and capacity building for management staff members.
7. Consensus and support from wider civil society (organization) towards the better revision of Broadcasting Law are developed.
8. Routine discussions are established between the actors of community broadcasting with the House of Representative members, especially the first commission and government.

CRI's interventions relate most closely to the CIVICUS dimensions of 'perception of impact' and 'level of organisation'. With regards to the first dimension, SK transitioned into an online platform to which CRI's community radio network are contributing. Of interest is the extent to which SK managed to mobilise community organisations to use information to demand for their rights. As was mentioned in the baseline report, CRI has undergone a number of changes in the last decade, which to some extent have been a natural transition as CRI and its network grew. From a focus of expanding its network, CRI moved towards introducing ICT to community radios, and lastly towards increasing political engagement through SK and its network. CRI's role in strengthening the civil society arena of community radios has thus been crucial.

## 3.3 Basic information

Table 8
*Basic information Combine Resource Institute*

| | | Details |
|---|---|---|
| Name of SPO | : | Combine Resource Institute (CRI) |
| Consortium | : | People Unlimited |
| CFA | : | Hivos |
| Start date of cooperation | : | 2005-2006 |
| MDG/Theme | : | Governance |
| MFS II Project Name | : | The Act Upon Information (Project ID: RO SEA at HO 1004708) |
| Contract period | : | February 29, 2012 - December 30, 2013, extended to March 2014 |
| Total budget | : | € 68,000 + € 8,200 = € 76,200 |
| Other donors if applicable | : | Ford Foundation (360,000 US$) and PSF (around 250,000 US$) that supported *Suara Komunitas*. |
| Estimation of % of budget for Civil Society20 | : | 59 % |

# 4 Data collection and analytical approach

## 4.1 Adjustments made in the methodology of the evaluation

The evaluation process started with an input-output-outcome analysis that utilized reports and other documents from the SPO. For CRI the analysis was based mainly on two project progress reports, which did not report against results or indicators systematically. As such, the evaluation team was only able to benefit partly from the input-output-outcome analysis for process-tracing.

The evaluation team followed the operational guidelines to a great extent, but was unable to have a workshop with all of CRI sub-groups as only executives and program managers attended the workshop. In practice the workshop lasted five hours, with the CRI executive only participating for half of the workshop period.

The evaluation team was unable to get averages or scores for each subgroup as participation was not consistent and staffs were hesitant to give scores due to a lack of confidence in undertaking critical self-assessment. The in-country team assigned the scores and then ran them past CRI to confirm the scores. When discussing outcomes, CRI wanted to focus on the positive outcomes and on proving that they were capable of influencing public sector.

Another obstacle was the recent staff changes that CRI has undergone. The CRI director has only been working with CRI for six months, and was recruited externally. Since the new director has limited institution knowledge, the in-country team conducted a follow-up interview with the SK program manager, rather than the director, as the most knowledgeable staff available to discuss the outcome selection and initial steps for in-depth tracing process.

## 4.2 Difficulties encountered during data collection

During data collection the team experienced the following difficulties:

- Workshop participants did not really understand, nor were they familiar with the CS indicators or the CIVICUS framework. They found it difficult to relate Combine's situation with the indicators, especially since none of them participated in the baseline process. This lessened the effectiveness of the workshop.
- At the end 2013, CRI's director changed and the organization experienced high staff turnovers. At the time of the end line, the longest serving program staff had been with the organization for just one year. The departing staff had much of the institutional knowledge and networks. As a result, current CRI staff provided the team with resource persons/respondents who were not always appropriate or relevant.
- CRI has not had a dedicated department or personnel for monitoring and evaluation. As such, it added difficulties to find hard data and affected the agreement on the outcomes.
- CRI has never had an evaluation conducted by an external party before (except the MFS-II baseline and end line) which affected their lack of preparation and minimum understanding of common evaluation practices.
- The evaluation team developed an online survey tool which was disseminated through SK, by e-mail, and through Facebook. However, in a month's period only 25 responses were received from a possible population of 865.
- Due to insufficient information acquired during the initial steps of the tracing process, the model of change had to be revisited often to be revised based on new information found by the evaluation team, which consequently meant that the evaluation team had to collect new evidence for the amended model of change.

- Hard data to show how many people benefited from the consolidation and validation (i.e. correction of invalid data) of recipients of the government's health insurance program (Outcome 2) was not available with CRI or with the Department of Health. The CSO coalition that was instrumental in achieving this outcome also did not monitor the impact of its work.
- There have been staff changes in Hivos' Regional Office for Southeast Asia. The current programme officer for the Expression and Engagement portfolio was not in charge of CRI during MFS II, and was only able to provide limited information with regards to the relevance of CRI's intervention to the CFA's priorities. Thus the relevance section is mostly based on a review of available documents.

## 4.3 Identification of two outcomes for in-depth process tracing

The first outcome is increased participation of community radios and community journalists in the SK online platform. The outcome was selected with the following considerations:

- It was one of several outcomes that all workshop participants agreed to as being a significant change.
- It is one of the most important elements in CRI's Theory of Change constructed during the baseline assessment in 2012
- Since this outcome is an indicator of increased level of organization, it can also be used to measure the extent of CRI's civic engagement as CRI depends substantially on its target groups' level of organisation.
- As one of the outcomes from CRI's proposal to Hivos, the evaluation team expected fewer difficulties to find supporting evidence.

The second outcome selected was: *Jaminan Sosial Masyarakat* (National Health Insurance for the Poor and Near Poor or Jamkesmas) beneficiary validation by the government's health department). This health insurance system was managed by the Ministry of Health since 2009 and is notorious for excluding people who claim to have a right to the benefits due to often erroneous beneficiary selection. The reasons for choosing this outcome are:

- It was one of the two available examples of impact on public sector policies or practices, while CRI's ToC and proposal specifically referred to this outcome as a critical element of their work.
- The other outcome provided was related to the SID program which was no longer supported by Hivos.
- CRI cannot provide strong evidence for their other outcomes as it was poorly monitored, and there was no available research from CRI or external parties that could be used.

The decision to focus on outcomes related only to the SK program was based upon the following considerations:

- According to baseline, SK is CRI's most strategic program to which all other CRI programs can be integrated or connected.
- SK receives the largest funds from three major donors; Hivos' support being almost exclusively for the SK program.
- In line with CRI's new strategy to delineate mandates between CRI and the Indonesian Community Radio Network (Jaringan Radio Komunitas Indonesia or JRKI), SK is the only program where CRI and JRKI have shared target groups.

Based upon an analysis of the projects and programmes financed by the Dutch CFAs, four strategic orientations for civil society were identified, two of which were selected for each SPO for in-depth process tracing. CDI suggested to the country team to look at the selected strategic orientations. For CRI, both outcomes matched with civil society orientations in multiple ways: ensuring that the organisations that receive support from the SPO (intermediary organisations) are capable of playing their role in civil society; strengthening the relations with other organisations in civil society to undertake joint activities, and; influencing policies and practices of public or private sector organisations. Also, based on CRI's ToC, each outcome represents "critical engagement" and "quality policy". Both preconditions are related and sit at the top level of the ToC. Therefore it was of interest to see whether there was a relation in practice and whether both were realized by CRI's contributions.

# 5 Results

## 5.1 Overview of planned and realised outcomes

Table 9

*Overview of results achieved in relation to project plan CRI*

| Planned results | | Level of achievement |
|---|---|---|
| Objective 1 | The occurrence of the follow-up actions undertaken by stakeholders at the regional level on issues/concerns raised by SK | Partially achieved: a number of issues escalated. |
| Objective 2 | SK able to reach target audience | Insufficient data available to conclude level of achievement. |
| Objective 3 | Development of the capacities of reporters, editors, managers and organization of SK | Partially achieved: From target of 150 people from 30 radio stations, only figures available for 2012: 99 people trained in journalistic skills. |
| Objective 4 | SK Network expansion | Achieved: Number of contributors grew from 543 in 2011 to 856 in 2013. In 2013 there were 169,390 visits to the SK website, compared to 152,513 in 2012. Number of articles/content published grew from 2,957 in 2012 to 4,631 in 2013. Unclear how any community radio stations were members in 2012, but currently 307 contribute to SK. |
| Objective 5 | Sanggar MeTIK becomes a vehicle for learning and media (ICT) for the strengthening of civil society | Not achieved: Sanggar MeTIK's activities were limited to providing trainings to high-school students.[21] |
| Objective 6 | Women's cooperatives - Koperasi Wanita Setara & JARPUK - able to use media and ICT to support the production and expansion of market access | Achieved: training provided to the cooperatives on how to use internet for small business promotion and using social media to build networks. (Overlap with *Pasar Komunitas* program). |
| (Additional) Objective 7 | Advocacy on revision of Broadcasting Law No. 32/2002 | Partially achieved: Although JRKI provided substantial inputs to the draft revision of the Law and advocacy activities carried out in 2012, Law has not been revised. |

Sources: CRI 2012 Report to Hivos, JRKI's Feb-April 2013 Report to CRI, and CRI's 2013 Annual Report.

With regards to assessing planned versus achieved results for CRI, it should be noted that the proposal submitted to Hivos, contract signed between the SPO and the CFA, and the project budget were not sufficiently aligned. In addition, the support from PSF and Ford Foundation to the *Suara Komunitas* network also has an impact on attributing realised outcomes to MFS II interventions.

## 5.2 Changes in civil society in the 2012-2014 period with particular focus on the relevant MDGs & themes in the selected country?

### 5.2.1 Civic Engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

CRI has not changed the way it engages civil society since the baseline. The SPO does not position itself as the frontline defender of marginalised groups. Rather, CRI works with its intermediate

[21] SanggarMeTIK's Twitter account was established at the end of 2011 and only successfully had 3 Tweets and 9 followers. No new feeds since 2011. Twitter, "Sanggar Me TIK". Available from https://twitter.com/SanggarMeTIK (accessed 1 November 2014)

organisations, in this case community radios, to promote citizen journalism so that alternative and credible grassroots information is brought into a public space through the internet platform of Suara Komunitas. CRI hopes that this form of journalism will be able to influence authorities and other stakeholders. Since 2012, there has been a 25 percent increase in the number of SK contributors, 37 percent of which are community radios. Since Suara Komunitas is an open, online network, many others have joined and contributed content. Members include NGO representatives, individuals and bloggers. Furthermore there has been an increase of 7 percent in the number of web visitors and 56 percent increase in articles produced.

CRI claims that community radios have become more involved and more capable in taking part in Suara Komunitas. While the SK structure now has an ethical board, executives, editors, and contributors, CRI was responsible for appointing individuals to these positions and the platform still relies on CRI for funding. At the same time, SK's leadership has requested greater decision-making roles in managing funds. CRI's management claimed that the SK program was formulated together with the target groups, however there is no evidence of greater participation of community radios or other contributors in program planning.

From 2009-2012, Hivos also funded interventions to develop Village Information Systems or *Sistem Informasi Desa* (SID), which provided villages with a platform to collect and store more accurate information. The project started as a pilot project in three villages, spreading to more villages in Central Java and Yogyakarta provinces in 2010. Hivos no longer funds these initiatives, but with the support of Ford Foundation, UNDP and other development partners, SID has been replicated to 221 villages across 5 provinces in 2013. Through SID there is greater transparency of data at the village level.

In both program areas, SK and SID, CRI sees itself as a connector, facilitating the sharing of information by providing ICT-based solutions to be used in communication or lobby to policy-makers. On its own, CRI does not have any direct political engagement and does not have a defined lobby or advocacy agenda. This has not changed since the baseline. CRI does provide inputs to JRKI on lobby issues, such as the revision of Law No. 32/2002 Broadcasting. In addition, CRI worked with Grassroots Information Channel (SIAR) and with Sekber Jamkesmas to lobby for a validation of Jamkesmas beneficiaries in 2013.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.2 Level of Organisation

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

Since the baseline, CRI has not expanded its network with other CSOs. Informal networks with Yogyakarta-based NGOs such as PKBI, KID, IRE, and IDEA have been maintained. Collaboration with these networks is subject to opportunities arising from funding resources or on issues that are relevant to Suara Komunitas and community radios. CRI's own networking capacity is likely to have been affected by high staff-turnover rate in 2013-2014, which saw staff with personal relations to Yogyakarta-based NGOs leave for positions elsewhere.

CRI's relation to its closest partner and 'younger brother', *Jaringan Radio Komunitas Indonesia* (JRKI), the official umbrella organization for community radios in Indonesia, is evolving. Set up in 2002 with CRI support, its capacity as an organization has grown over time and CRI is now trying to delineate a clear distinction of roles between it and JRKI. CRI sees itself as a resource provider and JRKI's role as expanding the network of community radios, providing technical support and registration of newly established stations. Despite a clearer distinction of roles, JRKI is still dependent on CRI for programs and funding. In 2014, the intensity of engagement with JRKI has increased due to collaborative efforts in implementing a National Program for Community Empowerment (PNPM) Support Facility-funded project which engages community radios in monitoring this government's program.

Another area of collaboration with JRKI has been on the revision of the Broadcasting Law. Both CRI and JRKI have a joint interest in providing inputs to a new legislation. Additionally, JRKI has assisted CRI to recruit more collaborators for the Suara Komunitas platform. However, JRKI has also been

critical of SK, as in their view it may pull community radio activists away from their core area of work, namely producing audio-content, to producing written material for the SK website.

CRI claims that between 2012 and 2014, community radio capacity to defend the interests of the communities they represent has improved through their participation and contribution to SK. Community radios' participation in SK has indeed improved as illustrated by the increase in contributors (including female contributors), production of content, and web page visitors. Respondents to a SurveyMETER-commissioned questionnaire said that their networking capacity has increased since joining Suara Komunitas. Respondents attributed this improved capacity predominantly to CRI. Despite improvements, CRI does not have a system in place to monitor satisfaction of SK contributors or to monitor the extent to which follow-up actions were undertaken as a result of issues raised on the SK platform.

But the survey results also revealed further demands for improved networking amongst the platform members (See Appendix 3 for detailed responses to the questionnaire). Suara Komunitas contributors who responded to the survey noted a number of areas where they expect CRI to play a role. These include more effective network capacity to follow up on issues raised through SK with relevant stakeholders, including developing skills in advocacy. CRI has identified a number of advocacy issues that could be part of joint advocacy support to community radios in September 2014. But it is still unclear how CRI will work with the community radios through the SK platform on these issues. The results of the process-tracing conducted for outcomes achieved by CRI since the baseline suggest that producing content on issues and increasing media coverage is not sufficient for changes in policies and practices to occur. Direct lobby and advocacy and partnership with other CSOs are also required and should be planned and budgeted for. It has taken CRI considerable time to prove its ToC ('the act upon information') through the Jamkesmas beneficiary validation; and it took funding from a donor to push for this achievement.

According to CRI they are now working with a smaller program budget than during the baseline, as a result of the discontinuation of Hivos funding. However, the extent to which this has indeed impacted heavily on the financial resource base of the SPO is unclear, as CRI has attracted sizeable funding from the Ford Foundation as well as contributions from the PNPM Support Facility (PSF), USAID, Misereor and others. Hivos was their second largest funder, thus going forward, CRI may indeed need to expand its resource base further. There will likely be opportunities for CRI to excel in the area of ICT. On a critical note, the evaluation team found that there were overlaps in funding. For example, the outcome achieved with regards to Jamkesmas beneficiary validation has been claimed by CRI to be a result of Hivos funding, although it is clear that Ford Foundation funds contributed to pushing the agenda forward.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

There has been no significant change in the downward accountability of CRI since the baseline. Quarterly meetings between the executive and the board continue to take place. None of the board members are constituents from community radios. CRI has also begun to make their annual reports accessible to the public. These reports contain some statistics about the share of donor contributions to their programs. CRI does not have a dedicated division or staff for monitoring and evaluation. Annual audits are performed, in line with CRI's code of conduct; although they are still financed by donors.

As a follow up to the baseline assessment conducted for MFS II in July 2012, a series of strategic planning meetings were held to improve CRI's overall direction. However since then, many of the former staff have left and this may influence the future direction of the SPO.

**Score baseline 2012 on an absolute scale from 0-3: 2**

**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perception of both civil society actors (internal) as actors outside civil society (outsiders) is taken into account. Specific sub dimensions for this evaluation are the extent to which CRI has contributed to engage more people in social or political activities, has contributed to strengthening CSOs and their networks, and has influenced public and private sector policies.

CRI does not monitor the satisfaction of its beneficiaries or target groups. CRI maintains that there is an increasing level of satisfaction of SK members and contributors. This has also been shown from the survey conducted for this end line evaluation. 88 percent of the respondents agreed that CRI contributed to facilitating/creating a network around them. 87.5 percent of the respondents believe that SK has unique features and that content is not like mainstream media news in that it is more relevant for the grassroots level. While many contributors joined SK for its potential to act on information, only 52 percent now perceive it as a benefit of joining SK. Although 68 percent said that there has been adequate follow-up toward escalated issues on SK, there is a disparity between the original expectations and the perception of current impact. CRI and SK do not properly monitor the extent to which SK has been utilized to urge a follow up of issues by the government or private sector. This has made it a challenge for the evaluation team to substantiate claims with evidence from specific cases. CRI and SK should invest in putting in place systems to measure the effectiveness of the SK platform.

With regards to the satisfaction of community radio, CRI admits that some may be less satisfied than during the baseline. They ascribe this to the repositioning and a new style of management that has taken root within CRI itself and see disappointment as a natural reaction to change. Without a monitoring system and no community radios represented in the board or organizational structure it is difficult for CRI to evaluate their performance vis-à-vis their community radio network, and even more difficult to track whether the community radios they have supported have improved their service delivery to grassroots populations. There is little evidence of the positive changes brought about by the SK network, other than the validation of Jamkesmas beneficiaries. CRI sees the successful Jamkesmas case as evidence for its ability, together with its network (SK and SIAR) to influence the public sector. But, issue of erroneous Jamkesmas beneficiary lists was not an issue that SK members urged CRI to take action on, rather CRI selected the case as an area of intervention to prove their theory of change (act upon information). As such, the increased coverage of the issue through Facebook, Twitter, community radio broadcasts and SK was very much driven by CRI (and to an extent the donor). Even in this case the issuance of a letter by the Ministry of Health on grassroots participation in beneficiary validation cannot be attributed to CRI efforts alone. CRI joined a coalition of other organisations led by the Yogyakarta Ombudsman, named *Sekertariat Bersama Jamkesmas,* to lobby the Ministry of Health. It is likely that the change would have occurred even without CRI's involvement since pressure from different groups had been building since 2012. The evaluation has not been able to trace how many people benefitted from this correction of beneficiary lists, since none of the actors involved maintained records.

While we do not doubt that there may have been other results from the work of community radios and SK at the local level, there is no sufficient evidence to substantiate this. What is clear is that there has been an increase in community radio participation in SK, and that in general community radios are positive about the benefits of the platform, especially in creating a network with other SK contributors. CRI is still regarded as reputable resource organization in the area of community media development, specializing in community radios.

CRI's collaborates with local governments at the district and village level for the purpose of implementing their village information systems. More villages are using these systems since the baseline. CRI, together with other NGOs, have also been involved in networks to lobby for change in public sector policy and practices, like in the Jamkesmas case. CRI also supported JRKI's collaboration with a number of CSOs to lobby for revisions of the Broadcasting Law. In this process, JRKI approached a party faction leader from Commission 1 of the National Parliament (*Komisi* 1 DPR) to

lead discussions on the revisions. Unfortunately, discussions of the revision have not been a priority for the government.

CRI does not attempt to engage directly with the private sector or in activities that may influence the private sector, other than where they interfere with community radios' ability to broadcast. Through the development of ICT systems, CRI has tried to link the economic potential of villages to the private sector to attract more investments or support the value chain of local products. CRI admits that SK and other information systems have yet to generate transparency in private sector practices and policies. The evaluation found no concrete trace evidence of concrete results in documentation provided, and did not assess potential results in this area.

**Score baseline 2012 on an absolute scale from 0-3: 1**
**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.5 Civil Society Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in chapter 3. In this section we describe how CRI is coping with that context.

During the 2012-2014 period, CRI and JRKI managed to stay engaged in discussions around the policy environment. This is especially important given that some legislation is limiting how social media and ICT can be used as a space for citizen engagement and freedom of speech. Although revisions to the Broadcasting Law were not passed in this period, JRKI and CRI did attempt to make meaningful contributions to a more enabling environment. Another example of this is CRI's and Indonesian ICT Volunteers' (*Relawan* TIK) membership to the Indonesian Civil Society Organizations' Network for Internet Governance (ID CONFIG) which seeks to facilitate exchange amongst CS actors working on Internet governance issues.

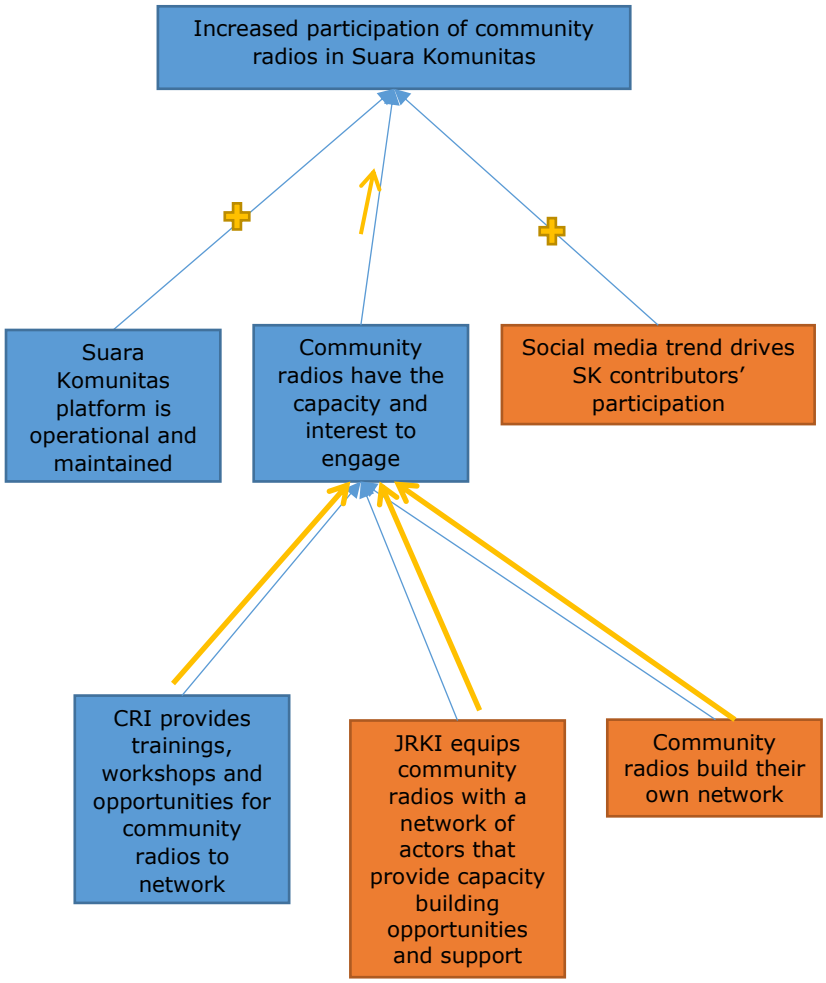
CRI has also repositioned in itself in the current context. Following the baseline evaluation in 2012, strategic meetings were undertaken to sharpen the focus on encouraging a more knowledgeable society and a responsive state. CRI now sees itself increasingly as a connector between the state and the community level, bridging the gap with ICT and media platforms. With an increased utilization of online media and information technology by the general public and the government, this is an important niche to fill.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 1**

## 5.3 To what degree are the changes attributable to the Southern partners?

Two outcomes were selected to measure the degree of MFS-II effectiveness. These were:

- Outcome 1: Increased community radio participation in Suara Komunitas. This outcome relates to capacity of intermediate organisations to play their role in civil society.
- Outcome 2: Ministry of Health's willingness to validate national health insurance beneficiary data as stipulated in Ministry of Health Letter No.149/2013 on Jamkesmas participation. This outcome relates to the strategic orientation of policy influencing.



### 5.3.1 Increased participation in Suara Komunitas

*The outcome achieved*

Indicators for increased community radio participation in Suara Komunitas consisted of changes in the number of contributors, topics, articles, visitors, and contributor satisfaction. From 2012-2013 the number of contributors increased with 35 percent to 833 contributions; the number of visitors increased with 7 percent, the number of articles that were produced increased with 56 percent and the number of articles per contributor increased with 25 percent (source: Project documents).

SurveyMETER also developed an online survey to capture the views and attitudes of Suara Komunitas contributors. Most questions were multiple choice, to anticipate a combination of possible answers. 88 percent of the 25 respondents that participated in the online survey reported that if SK had not existed, they would have missed out on certain benefits. 72 percent of contributors said they joined SK to escalate issues expecting follow-up from relevant stakeholders. When comparing the motivation for joining SK with the benefits respondents said they received after joining, there was a disparity. While 72 percent of the respondents joined SK because they so urge an "act upon information", only 52 percent of the respondents found this benefit to be realized. There is also a disparity between expectations upon joining and perceived benefit in the area of relevance of content produced. However respondents did report that they benefited from an improvement in their network. Also JRKI confirms that SK has been successful in attracting more contributors from community radios, to such extent that may even disrupt their own broadcasting activities (source: interview with JRKI).

The contribution of SK members to the online survey of SurveyMETER for this evaluation was only 25 out of possible population of 833 persons. The low level of response generated on the SK platform and the better response rates received through Facebook could be interpreted as a lack of participation in online activities, or a preference for regular use of social media over SK.

*Causal pathways that explain the outcome*

There are three possible pathways that may explain this outcome:

1. In the first pathway, the SK website is maintained and fully operational, enabling the participation of community radios. The SK platform is membership-based, open to anyone to sign up, but also has a managing team that has been appointed by CRI. Hivos funds supported the operations and maintenance of the platform, as well as the connectivity and development of Suarakomunitas.net. In addition to that, there were interventions to strengthen the institutional management of SK member representatives. To reject this pathway, we need evidence that the SK website has not been operational, or that the SK website has been operational without CRI's support.
2. In the second pathway, SK members have a network that supports their capacity building needs and interests. In order to participate effectively, SK members need to have adequate journalism capacity, critical awareness and interest, as well as the ability to sustain their day-to-day operations (majority being community radios). CRI doesn't see itself as a single provider for all. Instead, their strategy relies more on the creation of a network around the community radio stations. With such a network, CRI's strategy is to strengthen only a handful of radio stations as hubs through trainings, that then further support other radio stations in their region. As such, community radios need to rely on a wider network of organisations for capacity development and technical support. The development of community radio capacity can thus stem from different

causes or sources: CRI's initiative, JRKI's (the umbrella organization for community radios) interventions, or community radio's own initiatives. To reject this pathway, we need evidence that members have joined SK with no clear interest or adequate capacity, or that only a small fraction of members attribute their increased interest and capacity to their own initiatives or to other organisations in their network, outside CRI.

3. Lastly, social media trends or the agenda of external actors have driven the participation of members in SK. It is highly possible that members who are internet literate and savvy already use social media and other online mediums/platforms. As such they perceive SK as another form of social media. Some SK members' are also active in other CSO or NGO-driven networks (for example: WALHI), as such it might be possible that their intention was to use SK as an extension for their own messaging or campaigns. To reject this pathway, we need to prove that SK members have used SK for its unique features of publishing grassroots level information, making it distinguishable from social media. Or we could confirm that members have indeed used SK for their own interests.

*Information that confirms or rejects the pathways:*
Information that *confirms* pathway 1:
It's logical that without operational funds for the website as the platform, there would be no participation at all in SK. CRI allocated IDR 75 million (10 percent of the total budget) for website management, internet, and server colocation in the 2012-2013 period. Since its launch in July 2008, SK has continued to run and be a part of CRI's programmatic interventions. The Suarakomunitas.net domain was registered in March 2009.

In September 2012, a member-based organizational structure was created for SK as an independent entity, allowing SK to be responsible for operating and managing the citizen journalism website. In the period between 2012 and 2014, new articles and content were uploaded on a regular basis, suggesting that the web-based platform was functioning as intended. SK is run like social media platforms, in that it open to the general public to sign up and become a member. However, SK does remain dependent on CRI for funding support.

Information that *confirms* pathway 2:
In the multiple-response questionnaire, when asked which organisations contributed to an improved capacity, 72 percent of the 25 respondents felt that CRI contributed toward their increased capacity, while 60 percent attributed this capacity improvement to JRKI. Interestingly, 52 percent of the respondents reported that they built their capacity via self-initiative. So while there are more sources for capacity improvement, most respondents conclude that CRI is the most predominant actor.

CRI did not work alone to recruit more contributors for SK. CRI worked with JRKI to recruit more contributors from the West Sulawesi region. Trainings and workshops were provided to SK contributors in the 2012-2013 period, particularly improving their journalistic skills. In regions where CRI had a network, CRI used a number of community radios with more experience as hubs for other radio stations nearby. These hubs were able to promote SK and mobilize membership of the online platform.

Information that *confirms* pathway 3:
The spread and penetration of internet and ICT technologies across the country is increasing, with an expected growth of 33 percent in 2013[22]. This represents a general trend that more people are turning to internet and ICT and that radio and television are decreasing in importance as technologies to transfer information.

Information that *rejects* pathway 3:
96 percent of respondents from the SurveyMETER contributors' survey think that although SK has a similar function as other social media, SK has unique features that distinguish it from other online or social media. 87.5 percent of the respondents believe that these features lie in the relevancy of the news, because it does not produce content like mainstream media, but news relevant for the grassroots level. 41.7 percent of the respondents think that SK allows for more focused discourse that

[22] "Outcome report 2011-2013", Press Freedom 2.0, 2014

may lead to effective follow-up of issues by relevant stakeholders. 45.8 percent think that SK content is more credible than other social media.

Interestingly, the survey, although distributed through various means, received mediocre levels of response. 24 of the 25 survey responses were collected through Facebook links, and none from a SK web link, which is meant to be a two way communication platform. This suggests that contributors still prefer to use other social media more regularly.

Not all of the contributors to SK had internet connections prior to 2012. CRI allocated a budget to provide internet connectivity packages (3G modem) to 20 new SK members. This probably helped to increase participation in SK, as the assumption is that those that were provided with internet connections did not have access to online, social media. Although SK grew alongside social media outlets, what drives the participation is the platform's unique feature (grassroots news). But, internet-based journalism and social media are being used in a mutually contributing manner.

*Conclusion:*
Based upon the analysis of the information available, we conclude that the first pathway, the creation of the SK platform is necessary for increased online participation: it is a condition. Also the third pathway, more people having access to ICT and internet is necessary but not sufficient and hence a condition. The second pathway that consists of capacity building efforts by CRI, JRKI and by the online journalists themselves is a sufficient explanation for increased participation. However, given the fact that only 37 % of the contributors consist of community radios, the other contributors may have other strategies in place to build their capacities to participate.
As for causes that lead to pathway 2, the explanation is that CRI's intervention, JRKI's intervention, and members' own initiatives are all *sufficient* to build supporting networks that enhance member capacity and interests, but each organization on its own is not *necessary* since the intervention of others can explain the pathway as well. The majority of the respondents of the contributors' survey attributed their capacity development to a combination of actors, with 72 percent of 25 respondents choosing CRI and 60 percent choosing JRKI.

CRI's role is important in the outcome achievement, particularly in:
- Providing and maintaining the SK citizen journalism website;
- Creating a member based management structure that is open for anyone to join. Although it has its own management structure, appointed by CRI through a strategic planning meeting, SK still relies on CRI for funding.
- Providing trainings to developing capacity and interest of SK members; and
- Providing internet connectivity packages for new SK members.

### 5.3.2 MoH validates data concerning beneficiaries that should be covered by the national health insurance system as stipulated in MoH Letter No.149/2013 on Jamkesmas Participation

*The outcome achieved*
Jamkesmas, a health insurance system managed by the Ministry of Health (MoH) since 2009 has been unpopular nationwide due to the exclusion of people who claim to have a right to the benefits and due to often erroneous beneficiary selection.

Starting from September 2012, CRI began to see this issue as an opportunity to accelerate the achievement of Objective 1 of their logical framework "follow-up actions by stakeholders upon issues escalated in SK". Hence, with funding secured from the Ford Foundation, CRI commissioned *Saluran Informasi Akar Rumput* (Grassroots Information Channel) or SIAR to conduct a series of actions to engage the Ministry of Health to improve the beneficiary selection for Jamkesmas.

On 20 March 2013, the Health Minister signed a letter (No.149/2013) on Jamkesmas Participation, which allowed Jamkesmas beneficiary data validation to be carried out. In Yogyakarta Province, this allowed several people, who suffered from kidney-failure and could not afford proper health services, to be included as Jamkesmas beneficiaries. The validation of beneficiaries helped those potentially excluded to claim their rights for health insurance coverage. However, it seems that beneficiary validation and retargeting has not happened on a larger scale, mainly because the Ministry of Health (MoH) is transitioning into a new scheme under Social Security Agency for Health (BPJS *Kesehatan*), which merges all state-insurance providers under a single management and allows open beneficiary

registration (possibly as a reaction of Jamkesmas' failure). In addition, there is no information available as to how many people benefited from the validation of beneficiaries. Nevertheless, MoH's willingness to validate Jamkesmas beneficiary data as stipulated in the letter can be seen as a change in public sector practice. CRI claims to have contributed to this change. Other than health beneficiary validation, CRI is unable to provide another strong example of attaining Objective 1. Thus, it is worthy to trace whether CRI's effort have caused the issuance of the letter.

Box 1: Background on Jamkesmas, the government's health protection scheme

In 2004, the Ministry of Health introduced a health insurance system, as an initial step towards achieving universal health coverage through a scheme targeting the poor and near poor. *Jaminan Kesehatan Masyarakat* or Jamkesmas kicked off in January 2005 providing nearly 75 million people with free primary healthcare services.[23] The beneficiaries for the scheme are selected on the basis of household consumption rated determined through a nationally administered survey. Lists of eligible persons are received annually from the Central Bureau of Statistics (BPS).[24] The government assigned P.T. Askes to administer membership and operate the program. In 2013, the scheme was expanded to 86.4 million people.[25]

In 2014, the government took a further step towards universal health coverage, by officiating plans to merge four existing health schemes, including Jamkesmas, into one: *Badan Penyelenggara Jaminan Sosial* or BPJS Kesehatan (Social Security Agency for Health). This action followed from the government enacted BPJS law in 2011, which saw the establishment of the, not-for-profit administrating agency.[26]

*Causal pathways*

There are three possible pathways that may explain this outcome:

1. MoH acted on public pressure escalated through the media: CRI, as well as mainstream media, conducted efforts to drive media coverage to escalate the issue, believing that this would impose necessary public pressure on MoH. To reject this pathway, evidence is required that shows that such pressure had not taken effect, or that such pressure escalation never materialized. We also proceeded with tracing whether CRI media coverage contributed to, and generated, public pressure upon the MoH.
2. MoH acted upon lobby and advocacy from different possible CSOs and public sector actors like a Yogyakarta-based CSO platform called Sekber Jamkesmas and parliamentarians from other regions such as Sukoharjo District, Central Java. CRI and SIAR are affiliates of Sekber Jamkesmas, who agreed to join forces to lobby MoH on the Jamkesmas case. CRI claims to have facilitated several Sekber Jamkesmas lobby activities. To reject this pathway, we attempted to find evidence that MoH reacted upon their initiative. We traced whether MoH reacted specifically upon Sekber Jamkemas' lobby or upon other CS elements or parliament lobby. Further, we traced whether Sekber Jamkesmas lobby would have worked accordingly without CRI or SIAR facilitation.
3. MoH acts upon its own initiative. To reject this pathway, we needed to prove that there was no media coverage on Jamkesmas issues, and that no CS elements or parliamentarians lobbied for the issuance of a letter. All confirming evidence for the other two pathways would automatically reject this pathway.

*Information that confirms or rejects the pathways:*

Information that *rejects* pathway 1 that MoH reacted to public pressure created by media coverage is as follows. Although CRI supported online coverage through Suara Komunitas and social media, as well as radio coverage to pressure MoH into action, CRI reported that there was no (official) response from MoH to the public pressure from media coverage (herewith called "media pressure"). While there was indeed substantial media coverage of the issue by different media outlets, there is no evidence available to measure the extent to which media pressure on the Jamkesmas issue resulted in the change.

There is no evidence that CRI's media coverage escalated the issue to cause a response from the readers or audiences and in consequence pressurized MoH to take action. However, it is true that CRI contributed to Jamkesmas being covered in the media (via Suara Komunitas, Twitter, radio and TV broadcasts) and in turn that more people in the public probably read or heard about the issue.

Information that *confirms* pathway 2 that dialogue and more traditional forms of lobby by Sekber Jamkesmas and other CSOs in Yogyakarta, as well as pressure from parliamentarians in other regions resulted in the outcome are as follows. Sekber Jamkesmas, led by the Yogyakarta Ombudsman and joined by CSOs like PKBI, CRI and SIAR, began lobbying MoH in February 2013 to review practices on beneficiary selection and validation. Sekber Jamkesmas produced a policy brief that was disseminated six days after the MoH signature on the letter on 20 March 2013. There is no evidence that Sekber Jamkesmas' lobby prior to the issuance of the letter in March 2013 had an effect.

There is also no evidence that Sekber Jamkesmas would not have been able to lobby without CRI or SIAR facilitation. A member of Sekber Jamkesmas pointed to conducive personal relationships amongst members of Sekber Jamkesmas as the main driving factor behind their success. However, he did not deny that CRI and SIAR may have facilitated several meetings and hearings.

Based on an internet search of available documents, it seems that problems in the Jamkesmas beneficiary selection caused nation-wide reaction from CS elements and the parliaments as well[27]. In 2012, parliament members from Sukoharjo District lobbied the MoH regarding Jamkesmas beneficiary

[27]Manajemen Pembiayaan Kesehatan, "JAMKESMAS: DPRD Wonogiri Desak Validasi Data Jamkesmas". Available from http://www.manajemen-pembiayaankesehatan.net/index.php/list-berita/764-jamkesmas-dprd-wonogiri-desak-validasi-data-jamkesmas (accessed 2 November 2014)

issues. This followed community members submitting complaints to the parliament on Jamkesmas coverage. Evidence of these events can be found in local media (www.solopos.com, www.beritasatu.com and www.harianjogja.com). Thus, it is highly possible that other CS elements and local legislatives had moved before or in parallel with Sekber Jamkesmas.

Information that *rejects* pathway 3:
Confirming evidence for pathway 2 automatically rejects this pathway.

*Conclusion:*
Based upon the analysis of the information available, we conclude that the most likely explanation for the Ministry of Health's willingness to validate national health insurance beneficiary data as stipulated in Ministry of Health Letter No.149/2013 on Jamkesmas Participation is pathway 2, as other pathways are not confirmed. This means that the MoH reacted to direct lobby by civil society elements, including Sekber Jamkesmas, and local parliamentarians from Central Java. This is a *sufficient* and *necessary* cause for the outcome. The MoH letter was signed before Sekber Jamkesmas' policy brief was produced, thus Sekber Jamkesmas lobby is not a *sufficient* and *necessary* cause. But Sekber Jamkesmas' other activities prior to submitting their policy brief might have been taken into consideration by the MoH[28]. Sekber Jamkesmas' lobby and that of others CS elements or local parliament are both *sufficient* but not *necessary* to explain the outcome as there is no specific evidence to link the actions of certain actors to the change. Moreover, it can also be concluded that CRI' facilitation for Sekber Jamkesmas is *sufficient* but not *necessary*.

CRI's role was found not to be significant in the achievement of this outcome. First, in pathway 1 CRI did not seem to be successful in generating substantial public pressure through the media that was effective enough to obtain a response from MoH. The evaluation team was not able to find evidence that shows that an increase in media coverage, by CRI's supported Suara Komunitas, or other media outlets pressured MoH to take action. In pathway 2 while CRI participated in Sekber Jamkesmas as a member and claims to have facilitated a number of meetings, there is no evidence that CRI's contributions were necessary. PKBI, another member of Sekber Jamkesmas did not recall specifically how CRI contributed. On the other hand it is possible that early lobby by the Yogyakarta Ombudsman, who was later joined by CS elements to form the Sekber Jamkesmas, may have had a more prominent effect. However, there is insufficient documentary evidence to confirm this other than the fact that the MoH letter was issued prior to the production of Sekber Jamkesmas policy brief.

## 5.4 What is the relevance of these changes?

### 5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

The outcomes for which process tracing was conducted were relevant to the 2012 Theory of Change (ToC). In fact, the baseline exercise in 2012 helped to inform strategic planning with CRI. The ultimate objective of CRI was for autonomous citizen forums or organisations to be more able to participate in collective decision-making and influence the public or private arena. Preconditions for this change to occur were determined in the baseline as follows:

- Critical engagement with government and civil society organisations, characterised by a constructive and impartial relationship between government and CSO;
- 'Information native' society: a society with an adequate capability for knowledge management, characterised by active citizenship, capability to act upon information, and freedom of speech;
- Functional platform for knowledge exchange: sharing of best-practices and lessons learned, characterised by a functional regional platform;
- Networking in information management (same indicator as above);
- Critical engagement, characterised by the active participation of community contributors and their content actuality.

[28]Ibid.

The evaluation focused on confirming the engagement and participation in SK as a functional platform and the 'act upon information'. What the end line has shown is that CRI has not been able fully prove that the platform has contributed to a more informed civil society successfully making demands for better service coverage by the government. CRI drove the production of content and information on the Jamkesmas issue, rather than the citizen forum, or SK, itself reacting to citizen concerns. This means that while interventions were closely related to the ToC, the preconditions were not fully fulfilled, especially in the area of raising critical awareness so that citizen journalism platforms would be ready to engage with the public sector.

Regarding the participation of community radios in the SK platform, CRI has been a significant force. Not only did they provide technical support, they also managed to successfully draw on their network of community radios to expand membership in the SK platform. Since CRI shares its constituency with JRKI, they too have played a role in creating an informative native society. One aspect not included in the ToC was the potentially negative impacts of SK on traditional audio broadcasting by community radio stations, pulling the attention away from producing audio materials to producing online content. Some members of SK raised this issue during the end line evaluation.

In conclusion, critical engagement and the use of ICT, both key elements of Suara Komunitas, are critical to all of CRI's interventions. However, more efforts will be needed for Suara Komunitas to be more than just a critical content provider. As illustrated in the Jamkesmas case, media coverage alone does not cause a change in policy. It was only in 2012 that SK became and independent entity and further organisational strengthening will be needed if it is expected to 'act upon information' autonomously.

### 5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

The Reformation period (1998 and onwards) paved the way for journalists to become more critical and made media a more trusted source of public influence. Now, traditional media is making way to new media powered by the internet. Indonesia has approximately 63 million users, almost one-fourth of the total population.[29] However, "community radio occupies a unique position in Indonesia's local media scene, as it has been established and, where successful, sustained through grassroots initiatives".[30] As such it has the reputation of being a source of critical information and content. CRI has embraced ICT and media as means to critical engagement and freedom of expression, adapting to the changing context. CRI has sought to combine new ICT developments with its tradition network of community radios. In this sense, in terms of its strategy, it has adapted well to changes in the context. For community radios this is of relevance too, especially given a decrease in radio consumption in recent years.[31] However, for some radio stations engagement in SK may be stretching their limited resources to the limit.

Another area where CRI's interventions have been in line with the developing context is through village information systems or SID. In 2014, the government issued the Village Law which requires each village to develop an information system (Article 86)[32]. CRI has extensive experience in developing internet-based applications to assist the performance of village administrations (SID program). Additionally, CRI was able to leverage the utilization of SK in the policy-making process of

the Village Law in 2012. A parliamentary meeting on the draft Village Bill was open to the general public through SK, allowing citizens to provide live feedback through SMS, Twitter and Facebook[33].

For CRI to remain relevant to these important developments, it will have to think carefully about its position. As discussed in other sections of this report, CRI experienced high staff turnover and is in the process of delimitating its role towards community radios vis-à-vis JRKI. CRI has claimed that it wants to play a connector role. As a 'resource institute' it has to consider what resources and vital services it plans to offer to whom; and how this will enhance critical engagement and widen space for representation, balancing traditional media with digital media.

### 5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

In 2008, Hivos defined a strategy for 'civil society building' (CSB). Within the Hivos Vision Paper, Hivos defined civil society as a sphere "outside state, corporate sector and family – where people organise themselves to pursue their individual, group or common (public) interests". It further states, "Civil society is not restricted to (professional) intermediary, non-governmental organisations; on the contrary, it consists first and foremost of community-based and membership organisations, trade unions, religious organisations, and traditional associations."[34]

Hivos' support to CRI fits within the scope of the vision defined in 2008. In particular, Hivos recognized the important emergence of virtual movements that has gone hand-in-hand with the development of communications technology. Virtual networks are considered a form of collective action and a means to promote citizenship. Access to information promotes exchanges between citizens and is a tool to engage with other spheres.[35]

CRI's 'Act Upon Information' initiative falls under Hivos' Expression and Engagement programme. This programme aims to "improve the quality and diversity of the media, to give more people access to these media, to increase citizen's participation and to strengthen public support for the independent media"[36]. MFS II funds were intended to support this programme. Two Result Areas defined in the Hivos proposal under the Expression and Engagement programme are relevant to CRI: 1. the space for cultural expression and freedom of speech has been expanded and is actively used, and; 2. the space for citizen engagement in social processes has been expanded, resulting in social debate and cultural dialogue. In the proposal to MFS, Hivos proposed to expand the space for cultural and social expression, improve the quality of information and diversify information sources. Specifically, "ICT & (new) media play an essential role in constructing the desired critical dialogue between government and politics on the one hand and individual and organised citizens on the other."[37]

Out of four Hivos programmes outlined in the Business Plan, around 70 million (18 percent) of a total planned 387.9 MFS funding was budgeted for the Expression and Engagement portfolio globally[38]. Hivos received 20 percent less of the originally planned total from MFS II.[39] From 2011 to 2013, Expression and Engagement was the third largest out of the four programme areas in Indonesia in terms of annual expenditures (14.4 percent in 2011, 18.0 percent in 2012, and 17.9 percent in 2013).[40]

The changes achieved in the 2012-2014 period with regards to a strengthened media network and online platforms through CRI's interventions are relevant to the CFA's own strategy and proposed interventions. Through Suara Komunitas, community radios and other contributors have been given an opportunity to express their opinions and citizens have access to bottom-up information. As explained

in other sections, this has not yet resulted in broad citizen activism; acts upon information through CRI support are still limited to two cases.

## 5.5 Explaining factors

### 5.5.1 Internal factors

CRI's staff has almost entirely been replaced by new people, with just a handful left who were part of CRI during the baseline. The in-country evaluation team considers that high employee turnover may have potentially led to a loss in institutional knowledge, history and networks, which may translate into lower institutional efficiency. With so many employees leaving and or having being replaced, the organisation has been in the midst of recovering from the changes, which has cost time and attention. The absence of a monitoring and evaluation department has not helped this transition either, as knowledge and lesson learned were not properly documented, making it thus the more challenging to retain critical knowledge.

The baseline report and CRI's ToC expected that with the availability of information, critical awareness would be built leading to actions by grassroots groups or leading to pressure being applied on public or private sector actors. CRI expected this to occur organically. As it has turned out, direct interventions by CRI, such as the participation in Sekber Jamkesmas and pushing for the SK network to cover Jamkesmas cases, is still necessary. The SK program staff have had to manage a broad range of areas and issues, including monitoring the program. This has been quite a burden, in spite of an increase in the number of staff since the baseline.

### 5.5.2 External factors

SK as a platform for citizen journalism, community radios and the social media; has become more relevant and much more in demand. Civil society movements and government programs (such as BPJS online registration and tax registration) are increasingly making use of ICT and web platforms to produce and disseminate information. The combination of diminished state control over media since the Reformation and rapid technological and infrastructural development of ICT has given rise to these conditions. Indonesia is now the fifth largest Twitter user, and ranks fourth in global Facebook usage. Social media has become more important for civic engagement. The Coins for Prita movement is an example of how public support was rallied in 2009 through social media, drawing volunteers who were willing to collect donations that would help Prita Mulyasari seek justice through the court system. More people also use social media to shape values and opinion of others. The presidential elections in 2014 saw Facebook users openly declare their political aspirations, some trying to influence the choice of others. This has never happened on such a scale in Indonesia before, illustrating the penetration of online media into the daily lives and choices of people.

Alternative media platforms like SK that promote citizen journalism are popular amongst citizens that have become more critical of mainstream media. Many of the large television stations are owned by media conglomerates who are politically connected. In the recent elections, certain mainstream media were blatantly biased in their news coverage, trying to drive public votes to certain candidates. A national TV channel aired false quick count results, and even went as far as falsely declaring the victory of the candidate that received the backing of the television station's owner.

While there is a global trend which shows that more countries are beginning to limit internet freedom, Indonesia' internet freedom is not faring too badly: ranked 26$^{th}$ among 60 countries being evaluated as most case found is only related to "political, social, and/or religious content blocked".[41] CRI has been able to keep abreast with these developments in ICT and internet media, and are even helping to chart a new course. The current environment has been very conducive for the development of the SK

[41]Freedom House. 2013. *FREEDOM ON THE NET 2013: A Global Assessment of Internet and Digital Media*. Full Report. October 3. Available from https://freedomhouse.org/sites/default/files/resources/FOTN%202013_Full%20Report_0.pdf (accessed 4 November 2014)

platform, especially given that it is linked to news sources that are trusts (citizen journalists and community radios).

### 5.5.3 Relations CFA-SPO

Hivos has supported CRI since 2006. The SK program has received long-term, crucial Hivos support since the very early stages of its development. SK has become an adjoining factor in all of CRI's interventions; and given the growth of the internet and its relevance, it will only become more important in the future. SK has become the flagship of CRI's programs, which have now attracted other donors to join Hivos in supporting it.

One of the specific objectives of Hivos' support to CRI was to develop the SPO's internal capacity (Objective 6: Improved internal organizational development, specifically in internal mechanism and capacity building for management staff members). In July 2012, CRI directors and managers agreed to the need to improve organizational capacity, and strategic planning meetings were undertaken seemingly with Hivos support. Both the Co Funding Agency and its partner looked to be aware of the need to improve internal capacity. During the end line, it did not appear that interventions had their intended affect. If SK is seen to have not reached its full potential, part of the problem lies with internal management.

Of note is that Hivos discontinued its partnership with CRI because it found that CRI was well positioned and successfully attracting sufficient donor support and no longer required Hivos' contribution[42]. Larger donors like the World Bank financed PNPM Support Facility and Ford Foundation are providing much larger and more significant support than Hivos.

[42]Interview with Dyana Savina Hutadjulu, Hivos Programme Officer for Expression & Engagement, 2014

# 6 Discussion

## 6.1 Design of the intervention

The Suara Komunitas interventions in the 2012-2014 period were designed to build on the foundations laid in previous support periods. In the design, follow-up actions to issues brought up through community media would be supported. The outputs identified in the logical framework developed by CRI were not sufficient to bring about this main objective. It was not clear how members trained in journalistic skills, the establishment of SK as a membership-based organisation, expansion of membership base, network expansion to including bloggers, technological support, and content analysis and distribution[43] would necessarily lead to the desired change.

Another observation is that the assumptions and preconditions in CRI's ToC were not sufficient. CRI assumed that creating critical awareness through citizen journalism platforms would 'naturally' or 'organically' provide ammunition to engage with the public sector and undertake actions. The assumption seemed to be that SK, as a platform, would promote an exchange of information which would lead to interventions undertaken by network members or would spark a reaction from the public or private sphere. What the evaluation showed was that specific actions were needed to bring about the 'act upon information'. SK members may need more than just critical journalism capacity to use their information to create change. They may need capacity in lobby and advocacy or campaign messaging. In hindsight, more inputs and actions would be required to create a space for interaction with decision and policy-makers. CRI itself could have facilitated this to a larger extent, or SK as an organisation could have played this role if it had sufficient institutional capacity support.

Whether or not there were local actions undertaken by SK members in regions supported by CRI cannot be determined since there were no specific indicators designed to monitor this, nor was there a system in place to capture and report such actions. It is also questionable whether or not SK as an independent organisation can undertake these functions since its social organs are composed of editors and journalists, rather including activist-based or experience lobby organisations.

Last, community radio's engagement and eagerness to contribute to SK may have led some of them away from their core business, which is producing audio content. This is a risk that could have been anticipated from the start.

From the experiences and practices of the 'Act Upon Information', it would be fair to say that the model applied by CRI is replicable. This model entails creating alternative online platforms that allow traditional media (like community radios), citizen journalists and bloggers to express their opinions of issues that are relevant to them. However, more resources and efforts need to go into building skills and ability to utilize these opinions and bottom-up information towards strategic lobby and advocacy agendas. Some small examples of how this can happen have begun emerge, such as the interactive policy debate on the Draft Bill for the Village Law in 2012, which placed SK in a position to challenge the government.

CRI's other ICT-based interventions, such as the village information systems, are also powerful tools to influence politicians and decision-makers in the need to be more transparent and accountable. SK can also function in similar areas by stimulating contributors to report on specific strategic issues such as corruption or elections. Content and information would have to be systematically compiled, on the basis of which SK or its network could demand for the public or private sphere to be more accountable for their performance.

[43] "Proposal Hivos SK 2012 final Combine", Hivos, 2012

# 7 Conclusion

In the 2012-2014 period, CRI identified two important changes in the civil society context to which they claimed to be contributing to. The first change related to and improved 'level of organisation' of their community radio constituents through the online platform Suara Komunitas or SK. The membership of SK grew by 22 percent between 2012 and 2014, from 665 to 856 contributing members. This correlated with a doubling of the number of articles produced. Evaluation findings confirm that SK has allowed for members to improve their ability to network and that news and information on the platform is more relevant to grassroots issues.

The SK platform was also intended to be a means for the generation of action resulting from disseminated information. This is one of the key elements of CRI's Theory of Change as well as the interventions proposed and supported through Hivos and MFS II. However, the evaluation team found that SK itself does not automatically generate follow up by public or private sector actors. Rather, more traditional forms of advocacy and lobby are still required and arguably more effective in generating pressure for better services to be delivered by the government. This is evident from the case of government health insurance beneficiary data. Escalated media coverage by CRI through SK, Twitter and television and radio broadcasting did not lead to the willingness of the Ministry of Health to validate and correct insurance beneficiary data. One of the weaknesses of CRI's interventions has been the inability to monitor the impact of content produced. Without such monitoring, it is difficult for CRI to claim 'acts upon information'.

Given the above, the evaluation team concludes that the first outcome can be attributed to the role of the SPO and MFS II funding, but that there is insufficient evidence to conclude the same about the second outcome.

Nonetheless, these changes are relevant to the current development context of Indonesia. The general public and the government is increasingly taking advantage of information and communications technology (ICT) to raise critical awareness, express views and opinions and improve the quality of information and services delivered to the public. CRI has demonstrated an ability to develop and apply ICT as a means to bridge the digital divide and to recognize the key role of the internet in media convergence. CRI, through its village information system initiatives, has provided communities with access to digital information that can be used to promote better governance and village administration functions. With regards to media convergence, SK has become a means to cross-promote content from community radio broadcast media, citizen journalism and bloggers. This has attracted the attention and support from a number of larger development partners and donors in the country.

As an organisation CRI is trying to reaffirm itself as a 'connector' that facilitates linkages between its network with public and private sector actors. To be a connector and facilitate two-way exchanges between citizens and public and private sectors, CRI will need to more clearly define what the shared priorities are between these actors.

Table 10

*Summary of findings.*

| When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements? | Score |
|---|---|
| The CS interventions were well designed | 6 |
| The CS interventions were implemented as designed | 6 |
| The CS interventions reached their objectives | 5 |
| The observed outcomes are attributable to the CS interventions | 5 |
| The observed CS outcomes are relevant to the beneficiaries of the SPO | 5 |

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

# Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2.

- 2 = Considerable deterioration
- 1 = A slight deterioration
  0 = no change occurred, the situation is the same as in 2012
+1 = slight improvement
+2 = considerable improvement

| Dimension | | Indicators | Question | Change in the indicators in the 2012 – 2014 period |
|---|---|---|---|---|
| **Civic engagement** | 1 | Needs of marginalised groups | How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies? | +1 |
| | 2 | Involvement of target groups | What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities? | +1 |
| | 3 | Political engagement | How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups? | 0 |
| | | | | |
| **Level of organisation** | 5 | Relations with other organisations | In the past 12 months what has been the most intensive interaction you had with other CSOs? | + 1 |
| | 5 | Frequency of dialogue with closest CSO | In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with? | + 1 |
| | 6 | Defending the interests of marginalised groups | Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs? | +1 |
| | 7 | Composition current financial resource base | How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking? | + 2 |
| | | | | |
| **Practice of Values** | 8 | Downward accountability | To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them? | +1 |
| | 9 | Composition of social organs | What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for? | 0 |
| | 10 | External financial auditing | How regularly is your organisation audited externally? | 0 |
| | | | | |
| **Perception of impact** | 11 | Client satisfaction | What are the most important concerns of your target groups? How do your services take into account those important concerns? | +1 |
| | 12 | Civil society impact. | In the past 12 months, what impact did you have on building a strong civil society? | +1 |
| | 13 | Relation with public sector organisations | In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives? | +1 |
| | 14 | Relation with private sector organisations | In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective? | 0 |

| | | | | |
|---|---|---|---|---|
| | 15 | Influence upon public policies, rules, regulations | How successful have you been in influencing public policies and practices in the past 2 years? | 0 |
| | 16 | Influence upon private sector agencies' policies, rules, regulations. | How successful have you been in influencing private sector policies and practices in the past 2 years? | 0 |
| | | | | |
| **CS context** | 17 | Coping strategies | In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society? | +1 |

# Appendix 2 Changes in civil society indicators between 2012 and 2014

## 1. Civic Engagement

### 1.1. Needs of marginalised groups SPO

There is no change since the baseline in CRI's strategy to engage civil society. CRI does not position itself as the frontline defender of marginalised groups. As such, whether the interests of these marginalised groups are well addressed depends much more on the intermediate organisations (community radios) with which CRI is working. CRI has tried to mobilize the participation of community radios in a web-based citizen journalism platform, *Suara Komunitas* or SK (Voice of the Community) whose aim is to become a strategic medium to support advocacy regarding the fulfilling of basic rights of the citizens. With Hivos' support since 2006, there has been an increase in the number of SK web visitors, contributors, articles and topics as a result of CRI attempts to improve the participation and ability of community radios to reflect upon and produce information by improving their critical journalism capacity.

Based on CRI project documents, there is 20 percent increase in number of SK contributors from 2012 to 2013 (665 to 833), and up to August 2014 the number have become 856 contributors. There is only a 7 percent increase in number of web visitors from 2012-2013, but there is 56 percent increase in the number of articles produced in that period (which means that more participants are producing articles rather than just viewing). The number of articles rose from 2,951 to 4,630 from 2012-2013, which means that on average the production of content by each contributor increased from 4 articles in 2012 to 5 articles in 2013. These statistics show that more community radios are participating in SK and by doing so they are escalating issues and creating greater opportunity and power to engage the public and private sectors. Based on these findings, it can be concluded that during the past two years CRI has contributed to engaging more community radios and increasing their capability to defend marginalised groups.

### 1.2. Involvement of target groups SPO

According to CRI's management, community radios (CRI's intermediary organisations), have been more involved and been able to take more initiative in the past two years. In September 2012, SK's organisational structure was revamped, becoming an open membership community (*perkumpulan*) whose structure consists of an ethical board, executives, editor, and contributors[44]. This structure (member-based) has given CRI's target groups more opportunity to be involved and take greater responsibility in managing SK on their own, including website maintenance and editorial affairs, planning and organizing events and meetings, or contacting other partners. CRI management claimed that the SK program had been formulated together with the target groups, however there's no clear evidence as to when it has been done or whether all members were given equal opportunity to participate in the planning.

The involvement of SK members in strategic planning and in influencing the organizational direction of CRI seems to be limited. This may stem from the way financial resources are channelled to SK. As a new organisation, SK is still very much dependent on CRI for funding, and this financial dependence may allow the SK agenda to be driven by CRI. There is an uneasy contradiction between the increased level of involvement of community radios in SK vis-à-vis a financial dependence on CRI. This has

[44]http://suarakomunitas.net/baca/26319/bangun-lembaga-suara-komunitas/

surfaced through CRI's hesitancy to ask SK members to conduct stakeholder mapping, in requests from SK leadership to more freedom to manage funds according to their own initiatives[45], and in the form of requests from SK members for financial incentives to compensate for their contribution to SK[46].

### 1.3. Intensity of political engagement SPO

None of the new, or former, CRI personnel or board members are engaged in the political arena. As such, there is no change since the baseline. CRI has begun to see itself more as a 'connector', facilitating the ability of their network to share information which can be utilized in communication or lobby to policy-makers. CRI itself does not consider direct political engagement as an area where they should take part.

A recent example from this comes from JRKI's work in 2012 to lobby for the revision of Broadcasting Law No.32/2002 which is necessary for community radios' sustainability[47]. CRI facilitated JRKI to provide policy inputs, participating in the process but not leading it. With Ford Foundation support, CRI also worked with SIAR and a coalition of civil society actors to lobby the Ministry of Health for the validation of Jamkesmas beneficiaries in 2013. Currently CRI's role is less as a frontline in lobby activities compared to the baseline, and more as a facilitator and connector for their network to engage in political issues[48].

## 2. Level of Organisation

### 2.1 Relations with other organisations SPO

In terms of numbers, not much has changed with regards to CRI's network with other CSOs. CRI has kept its traditional and informal network with Yogyakarta-based CSOs such as PKBI, KID, IRE, IDEA. Although informal in nature, this network is considered proactive and responsive, as seen from how they worked together to advocate for better targeting of Jamkesmas (the social health insurance program for the poor and near-poor). See indicator 4.5 for further details on this. CRI's intermediate organizations reported that the number of organisations in their network has slightly increased as a result of CRI intervention[49].

CRI refers to *Jaringan Radio Komunitas Indonesia* (JRKI), the official umbrella organization for community radio, as their "younger brother". JRKI was set up in 2002[50] for the purpose of advocating for a broadcasting draft bill, in which CRI was involved as one of the frontline actor. JRKI's main responsibility is to engage politically, protecting the interest of its constituents. One their most important agenda at present is to revise the Broadcasting Law No.32/2002 which does not provide community radios with sufficient protection against private sector media. CRI is regarded by JRKI as the main knowledge resource provider for its constituents, and also partner in advocacy works.

CRI's relationship with JRKI has evolved as CRI has nurtured JRKI's capacity overtime, which has meant that some roles originally taken on by CRI have been completely transferred to JRKI, while others are still shared. CRI has left the tasks of expanding the community radio network and registration of community radios to JRKI since 2004. However, as JRKI's organisational capacity and capability is still weak, CRI's relationship with JRKI is still characterized by an interdependence relation. For JRKI, recent cooperation with CRI sought to benefit from CRI's management capacity, and experience in, for example, securing sponsors, budget management and reporting. CRI in turn benefitted from JRKI's fieldwork expertise and network base. An example of this type of partnership

[45] *Kharisma Prasetyo et al*, Evaluation Workshop, June 2014.
[46] *Kharisma Prasetyo et al*, Survey Kontributor SK, August 2014.
[47] Proposal_revisi_uu_penyiaran.doc
[48] *Kharisma Prasetyo et al*, Interview with JRKI, July 2014.
[49] *Kharisma Prasetyo et al*, Survey Kontributor SK, August 2014.
[50] http://jrki.wordpress.com/about/

was the 2012-initiated lobby for the revisions of the Broadcasting Law supported by Hivos[51]. In 2014, CRI and JRKI also partnered to secure funds from the PNPM Support Facility (engaging community radios for PNPM program monitoring).

As reported during the evaluation workshop, CRI's strategic planning conducted in late 2012 is another example of how the CRI-JRKI relationship has evolved. Although there are no available documents regarding the strategic planning results, actors close to CRI (including JRKI and community radios) confirmed that it has resulted in better and more consistent CRI positioning with a role as resource provider for community radios. For example, CRI no longer provides support for individual community radios on technical problems, encouraging them to seek help from other community radios within the JRKI network.

## 2.2. Frequency of dialogue with closest civil society organisation SPO

CRI's closest partner is JRKI given their shared network and interests and CRI's contribution to the founding of JRKI. Throughout 2014, CRI frequently interacted with JRKI as they were collaborating on the PSF-supported National Program for Community Empowerment (PNPM). For this purpose, JRKI staffs were working from the CRI office on a daily basis for a period of around four months. CRI also had an intense collaboration with JRKI and KontraS to monitor the presidential and legislative elections of 2014.

Reflecting on this most recent case described above, it would seem that the intensity of CRI's relations with JRKI has increased, in comparison to the baseline situation. Hivos' support also contributed to this increase as they funded the SK program and discussions on the revision of the Broadcasting Law, both platforms for CRI and JRKI cooperation. With regards to the SK initiative, CRI collaborated with JRKI to recruit contributors to the web platform in 2013.

However, there are concerns about the CRI-JRKI relationship, particularly with regards to each of the organisation's position in relation to their shared network of community radios. There is also concern that many of CRI's network relations with JRKI, as well as with other CSOs, have relied on personal relations of former CRI staff. This may affect the nature and frequency of CRI's relations to other CSOs in the future. Moreover, CRI's focus on SK does not always generate positive benefit to JRKI. The evaluation team received critical inputs from JRKI, namely that by mobilizing community radios to contribute to SK (internet-based media), CRI has unexpectedly pulled some community radio activists from their roots (audio-based media).

## 2.3. Defending the interests of marginalised groups SPO

Between 2012 and 2014, CRI aimed to improve their intermediate organisations' (community radios) capacity to defend the interest of the community they represent, by enabling them to participate and contribute to the citizen journalism website, SK. CRI believes that issues escalated through SK will be of use in lobbying the public or private sector for the benefit of the community. As earlier noted, there has been 20 percent increase in the number of SK contributors from 2012 to 2013, and a further increase in 2014 (22 percent). This has gone hand-in-hand with the production of more articles and website visitors. This shows that community radios are participating more in SK. Also worth noting is that the percentage of new female contributors grew between 2011 and 2012. In 2011, SK successfully attracted 97 new contributors, of which 24.75 percent were women. In 2012, SK grew with 92 contributors of which 31.6 percent were women.

Despite the improvements, CRI and its IOs do not have a system in place to monitor whether there are actions being undertaken by their target audience on the basis of information produced through the SK platform. In addition, it is difficult to know whether CRI, JRKI and SK contributors are always committed to representing community interests. The same could be said for new SK contributors, many of them bloggers. Critical remarks can also be made in the way the Jamkesmas issue was promoted and advocated. It was clear that CRI drove the production of relevant content push for the

[51]Proposal_revisi_uu_penyiaran.doc

escalation of the issue, rather than community radios in its network having critical awareness and driving an issue derived from the grassroots. It took Ford Foundation's financial contribution to push a chain of actions that should have happened regularly according to CRI' theory of change, and one that was clearly an objective in the proposal to Hivos. In their report to Ford Foundation, CRI admits that the program was an acceleration effort to achieve an outcome that should have been realized two years prior[52].

### 2.4. Composition financial resource base SPO

According to the participants in the workshop conducted with the SPO, compared to the previous program period, CRI is currently working with a smaller total budget as a result of decreasing Hivos support, while amounts from other sources remain the same. However, the extent to which this has indeed impacted heavily on the financial resource base of the SPO is unclear, as CRI has attracted sizeable funding from the Ford Foundation, five times larger than the contribution from Hivos. For example, during the 2012-2013 period, CRI received support from the following donors: Ford Foundation (US$ 360,000 for 24 months), Hivos (€60.000 for 22 months), and PSF (US$ 250,000 for 18 months). In 2012, Hivos contributed just 9 percent of CRI's total budget. In 2013 CRI received most of its funding from (in order of largest contributor to smallest): Ford Foundation, PSF, Hivos, ACCESS II, DAI-USAID, Misereor and Osaka University.[53] Going forward though, CRI may indeed face a challenge in maintaining the financial resources and funding base they have had.

In the 2012-2014 period, the three largest donors (Ford Foundation, PSF and Hivos) all supported SK. CRI differentiated each contribution based on the provinces covered. Hivos funds covered SK development in 6 provinces, Ford Foundation in 4 provinces, and PSF in 9 provinces. CRI also claimed to allocate each donor's funding to a specific focus. Hivos' funds aimed for activities related to strengthening the network at regional level; Ford Foundation for SK collaboration with other media to push the act upon information; while PSF for both strategies where it is related to PNPM program monitoring[54]. However, such differentiation still allows overlaps as similar initiatives are funded by all contributors. CRI can report the same result to two or more donors, as was the case with Jamkesmas validation mentioned in the indicator above (it is worthy to note that during the MFS-II evaluation workshop, the Jamkesmas validation was repeatedly mentioned by workshop participants as evidence for several indicators).

## 3. Practice of Values

### 3.1. Downward accountability SPO

CRI continues to hold regular quarterly meetings with the board members to allow the board to supervise organizational performance. However, CRI currently does not seem to have dedicated personnel for monitoring and evaluation in their organizational and personnel structure[55] although the baseline report and Hivos assessment suggested otherwise. As for sharing project and financial reports to CRI's target groups, in the SPO began to upload annual reports on their website for public access[56] (although the report does not provide figures for financial contributions by donors).

The MFS-II baseline in July 2012 was used as a valuable moment for CRI to reflect on its organization and led to a strategic planning meeting in December 2012. During the strategic planning, CRI tried to cope with increasing demand from the CS arena and aligned it with existing capacity and CRI's vision and mission[57].

[57]Progress Report HIVOS COMBINE #RO.SEA at HO 1004708, p.13

### 3.2 Composition of social organs SPO

There are no significant changes in the composition of the social organs of the SPO, although there have been internal personnel changes. In the past three years, two additional personnel were included in CRI's board. One of the new board members is the former CRI program manager. As during the baseline, none of the board members come from community radios (CRI's IOs). Suara Komunitas is an open network-based organization with a board of experts, a board of ethics, a chief editor and regional editors in 31 provinces. Its membership has grown to include community radios, NGOs and bloggers. This indicator is less relevant for CRI.

### 3.3. External financial auditing SPO

Annual audits are, as during the baseline, a part of CRI's organizational code of conduct and an internal performance indicator. Audits have been conducted regularly since 2008[58]. Hivos funded CRI's institutional audit for 2012-2013.

## 4. Perception of Impact

### 4.1. Client satisfaction SPO

CRI does not monitor the satisfaction of the users of SK or SID. Evaluation workshop participants only referred to the increasing level of SK participation within the last two years as evidence of increased client satisfaction. For the purpose of this evaluation, a survey amongst SK contributors was conducted, with the following findings:

- 88 percent of the respondents agreed that CRI contributed to facilitating/creating a network around them.
- 72 percent of the respondents feel that CRI contributed to their increased capacity.
- 60 percent attribute capacity development to JRKI, and 52 percent reported that capacity improvement was through self-initiative.
- 32 percent agree that their capacity has increased since participating in SK. Moreover, all respondents felt they now had adequate capacity after they participated in SK, while before, on 24 percent felt they had required capacity.
- 87.5 percent of the respondents believe that SK has unique features and that content is not like mainstream media news in that it is more relevant for the grassroots level.
- 68 percent perceive that there has been adequate follow-up toward escalated issues on SK.

Overall, the above survey results strongly suggest that there is more satisfaction since the baseline, especially with regards to SK. However, the last finding is rather questionable since it is contrary to the general evaluation findings and it is not supported by documents. CRI does not inventory or monitor the extent to which issues are followed up. Aside from the Jamkesmas validation case, dissemination of several position papers regarding bird flu, and the tweeting of facts regarding BOS (government school operational funds program), there is no further evidence of issue follow-up within the past three years. There is no adequate evidence from the SK contributor survey to attribute a change in public service provision to SK interventions, although the survey findings do suggest a satisfaction of SK (and the service of providing information thought the platform).

With regards to the satisfaction of IOs (community radio stations) with CRI's services in general, the SPO admits that some of their IOs may be less satisfied than during the baseline. They ascribe this to the repositioning that has taken place within CRI itself and see disappointment as a natural reaction to such changes. CRI's position has brought in what the organization describes, "a new style of

[58]Dokumen "penjelasantambahankeHivos2012.pdf"

cooperation and new opportunities to be able to do something about issues faced in their communities"[59].

## 4.2. Civil society impact SPO

The evaluation team found no strong evidence in the workshop or in available documents of a stronger civil society through CRI's direct interventions, or by way of improved performance of the community radio network in providing services to the local population since the baseline. Except for one example that is not strongly attributable to CRI's interventions (community radio activists in Palopo, Sulawesi advocating the Department of Forestry to protect indigenous forests), there is no information about how CRI and its IOs have impacted civil society in the last two years. Rather it seems that CRI selects topics to be advocated based on what local community radio initiatives it finds interesting[60].

CRI's progress reports provided no specific evidence or cases regarding the impact of CRI's efforts in providing communities with alternative sources of information. The 2012 report, for example, only went as far as claiming that CRI had created more opportunities for such impacts to happen[61], and an increase of community radio participation in SK (as detailed in indicator 1.1) as impacts to civil society. The latter point on SK participation is a fair observation (as shown in increased number of contributors, visitors, coverage, and articles). As such it could be said that civil society actors, especially community radios, have come together in a joint effort to improve information to be used to influence public and private sector arenas. The SK contributor survey also supports this argument as it reported that 88 percent respondents agreed that CRI had contributed in facilitating/creating network around them. In response to another question in the survey, 72 percent referred to an escalation of issues to push follow-up from relevant stakeholders as their motivation in joining SK. This shows that SK (if we consider this as an IO platform of CRI) has improved its performance since the baseline.

With regards to improving effective network capacity of its community radios, CRI was expected to conduct stakeholder mapping/inventory. CRI reported that this was done for Yogyakarta and North Sumatra province, but there has been little evidence that it occurred beyond these provinces. In September 2014, CRI planned to conduct more stakeholder inventories as part of its joint advocacy support to community radios[62] on specific issues or cases.

The evaluation does not wish to discredit the potential impact of community radios at the local, grassroots level. There are certainly positive changes that occurred. However, with the given resources and time for this evaluation, the team was unable to find evidence of this. From our observation, CRI is still regarded as reputable resource organization in the area of community media development, specializing in community radios. Many community radios have been established in marginalised area with the help from CRI, and such interventions surely have had positive impacts on civil society. Many studies (Gaida & Searle, 1980; White, 1976, 1977; Leslie, 1978; Jamison & McAnany, 1978; Byram, Kaute, & Matenge, 1980; Hall & Dodds, 1977; McAnany, 1976) have shown that such interventions have a civic education value. In this regard, Sweeney and Parlato (1982, p. 13) concluded that "...radio plays an effective educational role both as the sole medium or in conjunction with print and group support." [63] It is unfortunate that no hard evidence can be collected given the limits of the evaluation. In the future, CRI and JRKI should put more efforts into monitoring and documenting such impacts and changes.

## 4.3. Relation with public sector organisations SPO

CRI has no direct relations with public sector organisations except by promoting the implementation of SID to village governments and engaging in lobby together with other CSO actors. The number of village governments implementing SID has increased in the 2012-2014 period, with more village

[59]Evaluation workshop conducted with CRI

[62]http://www.combine.or.id/2014/09/combine-dan-media-komunitas-advokasi-isu-lokal-pascapemilu-2014/
[63]Ndubuisi Goodluck Nwaerondu and Gordon Thompson, *The Use of Educational Radio in Developing Countries: Lessons from the Past*, Worldbank online archive.

governments being serviced by CRI (figures presented under Indicator 1.1). District governments have also been involved in coordinating the SID intervention. As for engagement in lobbying with other actors, since the baseline CRI contributed to the validation of Jamkesmas beneficiaries. CRI and a coalition of Yogyakarta-based actors have had good relationships with the public sector at provincial and district level, which is regarded as the main factor behind the successful Jamkesmas lobby.

CRI target groups' (i.e. community radios) relations with the public sector varies in intensity from one region the next, depending on local dynamics and challenges. It is unclear how CRI has attempted to cope with the complexity of regional conditions and how it has tried to support community radios in improving relations with the public sector. Other than taking an inventory of potential areas for joint lobby at the regional level with their community radio network in seven provinces[64], there is no indication that CRI has undertaken any action to improve relations between community radio network members and the government.

## 4.4. Relation with private sector agencies SPO

CRI also does not engage directly with the private sector. As admitted by workshop participants, CRI's interventions at the level of community ICT systems (through SID, Pasar Komunitas program, etc.) have not been able to reach the desired impact of linking economic potentials at the village level with the private sector. Part of the contract deliverables with Hivos for the 2012-2013 period included supporting women's cooperatives to develop web/internet skills for business promotion. The extent to which this intervention and others have attracted private sector investments is unclear and unmonitored. In addition, the MFS-II baseline noted that Hivos did not continue with support to SID in the 2012-2013 period because achievements were less than expected.

## 4.5. Influence upon public policies, rules, regulations SPO

Compared to baseline, there are no significant improvements regarding CRI's or its IOs' ability to influence the public sector in the 2012-2014 period, with the exception of the successful Jamkesmas (national health insurance scheme) beneficiary validation. The case of invalid beneficiary lists was actually selected by CRI as an area for intervention, with funds from the Ford Foundation, in an attempt to prove that their theory of change can work. CRI drove the escalation of the issue via SK and other media outlets such as Twitter, Facebook, community radio, and broadcasts on state radio, as a means to apply public pressure on decision-makers. CRI worked together with a Yogyakarta-based CSO coalition named *Sekertariat Bersama Jamkesmas* to lobbying the Ministry of Health at the national level and the Yogyakarta provincial government. The result was that the head of the Health Department of Yogyakarta Province was willing to validate several beneficiaries and to accept input from the community should such cases be found in the future, as stipulated in Ministry of Health Letter No.149/2013 on Jamkesmas Participation. However, no hard data can be found to measure the scope of the validation (number of people benefitting), either from CRI, the CSO coalition, or from the Ministry of Health. There is also no evidence to suggest that the intervention was replicated elsewhere. One reason for the lack of replication has been the change in government policy and programs in mid-2013, resulting in the transformation of Jamkesmas into a new scheme called BPJS[65]. Compared to Jamkesmas, the BPJS scheme offers better services and beneficiary selection mechanism as it allows open registration (including online registration) while Jamkesmas beneficiary selection was based solely on government assessments.

The contribution analysis found only weak evidence of CRI's contribution to the issuance of the Ministry of Health Letter No.149/2013 on Jamkesmas Participation. There was no evidence that CRI drove there to be significant media coverage to influence the decision of policy-makers. There was evidence that the Yogyakarta-based CSO coalition conducted lobby at the national and provincial levels, but there was no evidence that without CRI support such lobby activities would not have been effective.

[64] http://www.combine.or.id/2014/09/combine-dan-media-komunitas-advokasi-isu-lokal-pascapemilu-2014/

[65] BPJS merge different government insurances (public health, labor, delivery) into single provider. It was officially established on 1 January 2014 (http://id.wikipedia.org/wiki/BPJS_Kesehatan)

CRI supported JRKI's collaboration with a number of CSOs to lobby for revisions of the Broadcasting Law. In this process, JRKI approached Commission 1 of the National Parliament (*Komisi* 1 DPR) to lead discussions on the revisions. Specifically, JRKI approached a member of the *Partai Amanat Nasional* (National Mandate Party) fraction to lead discussions with four relevant ministries. Unfortunately in 2013-2014, the agenda of parliamentarians and other politicians was influenced by Presidential elections, and the discussions of the revision took a backseat.[66]

As mentioned under indicator 4.4, CRI has done little to improve the level of engagement between its IOs and the public sector. As such there has been little influence on the public sector in the period since the baseline. Hivos' contribution to SK is still limited to increasing the potential for CRI's IOs to have an impact through a platform for credible information produced by community radios, bloggers and citizen journalists.

### 4.6. Influence upon private sector agencies' policies, rules, regulations SPO

Although CRI claimed that there were improvements in the extent to which the SPO has been able to influence the private sector, the evaluation team did not find any evidence of significant changes that occurred since the baseline. At present, CRI admits that information systems have not yet been able to generate transparency in private sector practices and policies. ICT support to villages has yet to open up market opportunities to local communities. Although the number of villages implementing and utilizing SID is increasing, the benefits are limited to improving administration processes of the village government. Additionally, there is no evidence yet that content produced through the SK platform has successfully influenced the practices or regulations of private sector actors. In this regard, there has been no improvement in CRI's ability to influence market actors.

## 5. Civil Society context

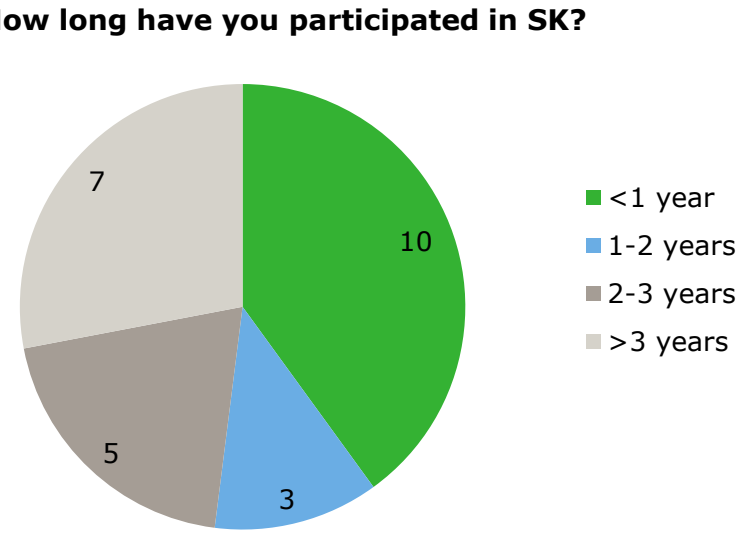
### 5.1. Coping strategies

A combination of obsolete strategic orientation (specifically the lack of a strategic plan) and increasing demand for CRI intervention from CS arena had caused the "organization to move without clear direction, becoming very lax in its efforts to meet the achievements"[67]. In response to this situation, CRI held a series of strategic planning meetings from October to December 2012, which were supported by Hivos through the 'Act Upon Information' program. These meetings were intended to "sharpen organisational performance in a variety of efforts to encourage a more knowledgeable society and responsive state"[68]. This vision was then to be translated into an adjusted strategy for each project in June 2013. The evaluation did not assess whether these changes have indeed materialized. However, JRKI and SK contributors have confirmed that there have been positive changes in CRI's approach since 2012.

Broadcasting Law No.32/2004 has provided community radios with the legitimacy and freedom to operate, but it still does not provide them with enough protection from private sector media. The law stipulates that community radios have to compete head-to-head with commercial radios in utilizing limited broadcasting bandwidth, while at the same time limiting their capability to generate funds. CRI and JRKI reacted to this issue by joining and strengthening existing efforts initiated by other actors such as PR2Media, *Masyarakat Peduli Media*, AJI, PKMBP, etc. CRI and JRKI expect to contribute by engaging its networks in lobby efforts to revise the law, facilitate personal lobby to parliament members, and drive public pressure by generating content on the SK platform, community radio, and social media. In this regard, CRI works together with JRKI to cope and respond to a perceived threat shared with by their target groups. Hivos supported this initiative by providing specific funding between 2012-2013 outside the 'Act Upon Information' program.

[66]JRKI's quarterly report to CRI: Laporan Tiga Bulanan Periode Febuari-April 2013, Advokasi Undang-undang Penyiaran Bagi Lembag Penyiaran Komunitas.
[67]Progress Report HIVOS COMBINE #RO.SEA at HO 1004708*, p.13*
[68]Ibid.

While SK is mainly used to publish news and articles[69] for a specific audience, the increased utilization of online and social media by the public sector presents opportunities for CRI. CRI can capitalize on existing opportunities to widen its engagement with civil society and bridge civil society actors with the public sector. CRI has already begun to connect and link Suara Komunitas with more popular media forms such as Twitter and Facebook. In addition, Ford Foundation funding in the 2012-2013 period specifically aimed to support CRI efforts to bridge the gap between the public sector and civil society, or grassroots, issues.



[69] As an interesting finding of this evaluation: from 25 SK contributors survey (an online survey) respondents, 24 of them participate via Facebook links, 1 via email, and none via SK link.

# Appendix 3 Suara Komunitas Contributors' Survey

***Survey information:***
The online survey was conducted over a three-week period, with a total of 25 valid responses. 22 of the 25 respondents responded to the survey via a Facebook link, while the other 3 responded to an email sent out to SK contributors. None the respondents responded through the *Suara Komunitas* website.

Most questions were multiple response, to anticipate a combination of answers and to capture respondents' views and attitudes.

**Length of respondents' participation in SK**
The survey found that out of 25 respondents, 13 had been part of SK for 2 years or less, while 12 had participated in SK for more than two years (7 of them for more than 3 years). This distribution may indicate that within the past 2 years, the number of SK members has increased significantly.

**Respondents' contribution of articles to the SK platform**

| Duration of participation in SK | | Since you joined SK, how many articles have you produced? | | |
|---|---|---|---|---|
| | | Mean | Sum | Count |
| How long respondents have been part of SK | <1 year | 35 | 345 | 10 |
| | 1-2 years | 22 | 67 | 3 |

A total of 412 articles have been produced by the 13 respondents who joined SK within the past 2 years. Although with great variance, on average, each respondent produced roughly produce 15 articles annually, or a little more than one every month.

**Respondents' backgrounds**

Of the 25 respondents, 19 had a community radio background. Four of the 19 identified themselves as NGO activist, 1 as an independent contributor, and the other 14 did not provide detailed backgrounds.

Of the 6 respondents who did not have a community radio background, 5 come from NGOs who are interested in participating in SK, 2 of whom consider themselves as independent contributors. One respondent of the 25 with no NGO or community radio background.

**Participation in Suara Komunitas: What motivates contributors?**

| What is the purpose of/your motivation for contributing to SK? | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| To obtain important information relevant to the community you represent | 56.0 | 14 |
| To join forces in a critical discourse | 48.0 | 12 |
| To urge stakeholders to follow up on garnering issues | 72.0 | 18 |
| To network and socialize with fellow contributors | 40.0 | 10 |
| To increase your own capacity or the capacity of the organization/community you represent | 52.0 | 13 |
| No specific purpose or motivation | 0 | 0 |

72 percent of contributors said they participated to escalate issues expecting follow-up from relevant stakeholders (in affirmation toward the "act upon information" theory). The second most chosen reason or motivation behind participation was to receive valuable information (56 percent of the respondents selected this as a reason for the motivation). 52 percent said a source of motivation was to increase their capacity. While 48 percent selected the participation in critical discourse as one of the reasons. The least selected response was to network or socialize with other contributors (40 percent).

**Participation in Suara Komunitas: Perceived benefits**

| What benefits has SK brought you so far? | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| Received important information that is relevant to the community you represent. | 48.0 | 12 |
| The development of joint, critical discourse | 48.0 | 12 |
| Urged stakeholders to follow up on garnering issues | 52.0 | 13 |
| Networking and socializing with fellow contributors | 60.0 | 15 |
| Increased capacity | 52.0 | 13 |
| No specific benefits | 0 | 0 |

As with the above question, more than one response was allowed for this question. All respondents perceived one benefit or another from joining SK. Most respondents perceived networking to be the greatest benefit that has taken place (60 percent), followed by increased capacity and urging stakeholder follow up to emerging issues (both 52 percent). Benefits least realized were receiving important information relevant to the contributors and developing a critical discourse (both 48 percent).

Interestingly, when comparing the motivation with the benefits received, there is a disparity. While 72 percent of the respondents joined SK because to urge an "act upon information", only 52 percent of the respondents found this benefit to be realized. 40 percent of the respondents joined SK for networking reasons, yet 60 percent now actually feel this to be a benefit. Despite the disparities in these aforementioned areas, respondents generally perceive that SK has been delivering what they

had expected from it.

| Comparison between benefit perceived vs expected: | | | |
|---|---|---|---|
| **Answer Options** | **Response Count expected** | **Response Count perceived** | **% deviation** |
| Received important information that is relevant to the community you represent. | 14 | 12 | - 14% |
| The development of joint, critical discourse | 12 | 12 | - |
| Urged stakeholders to follow up on garnering issues | 18 | 13 | - 28% |
| Networking and socializing with fellow contributors | 10 | 15 | + 50% |
| Increased individual capacity or the organization/community you represent | 13 | 13 | - |

In conclusion, we can say that respondents are overall satisfied with SK due to the benefits from improved networking. What seemingly has not met expectations is the relevance of content and the follow-up actions on issues.

Another question respondents were asked was the extent to which they felt that had SK not been there, there would be benefits they would be missing out on.

| To what extent do you agree with the following statement: If SK never existed, there would be a lot of benefits that you would have never have obtained. | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| Strongly agree | 40.0 | 10 |
| Agree | 44.0 | 11 |
| Neither agree nor disagree | 4.0 | 1 |
| Do not agree | 12.0 | 3 |
| Strongly disagree | 0 | 0 |

84 percent of the respondents agree that if SK had never existed, they would be missing benefits, while 12 percent disagreed with the statement.

| In your opinion, has there already been adequate follow-up to issues raised by SK? | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| Yes, adequate | 68.0 | 17 |
| No, not yet adequate | 24.0 | 6 |
| Do not know | 8.0 | 2 |

Although expectations regarding the follow-up of issues raised by SK have seemingly not been met, the responses to the adequacy of follow-up were generally positive, although a quarter said they were not adequate.

Input from respondents was also asked in the questionnaire. Below is a summary of inputs on what the expectations were of the respondents:

- More frequent meetings between contributors
- More contributors
- Improved communication between editors and contributors
- Improving journalism standards of written pieces
- Improving contributors' skills (not only in journalism/article writing), but also on critical-issues, networking, and advocacy
- Infrastructure support (internet connection)

- Better protection by the law for contributors
- To ensure independency
- More picture instead of text
- Incentives/rewards for contributors
- More follow-up on issues toward relevant stakeholders
- Media convergence (SK to include audio news from community radios as news source)
- Better SK website interface, design, and online reliability

**Social media trends: SK versus social media**

| **Relating to the presence of social media, how do you see the position of SK?** | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| SK has the same functions as social media, such as Facebook, Twitter, and other social media. | 4.0 | 1 |
| Although similar in function, SK has a unique function that cannot be replaced by Facebook, Twitter and other social media. | 96.0 | 24 |

96% of respondents think that although SK has unique features that distinguish it from other social media (thus signifying its relevance).

| **What distinguishes SK from other social media?** | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| Better quality news | 20.8 | 5 |
| More reliable and credible news source | 45.8 | 11 |
| More news that is relevant to grassroots, non-mainstream | 87.5 | 21 |
| There is a discourse that is more targeted/focused | 41.7 | 10 |
| More potential for follow-up to the discourse | 41.7 | 10 |

From multiple answers possible the majority or 87.5 percent of respondents believed that SK's unique feature lies in the news relevancy since content is more grassroots, unlike mainstream media. The second most picked response was that SK has more reliable and credible news sources. 41.7 percent also selected more targeted discourse and more potential for follow-up to the discourse as distinguishing features.

**Changes in capacity of respondents: prior to joining SK and at present**

| **To what extent do you agree with the following statement: Prior to joining SK, you already had sufficient capacity to process and deliver information** | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| Strongly agree | 8.0 | 2 |
| Agree | 24.0 | 6 |
| Neither agree nor disagree | 44.0 | 11 |
| Do not agree | 16.0 | 4 |
| Strongly disagree | 8.0 | 2 |

| **To what extent do you agree with the following statement: At present, you have enough capacity to process and deliver information** | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| Strongly agree | 28.0 | 7 |
| Agree | 56.0 | 14 |

| | | |
|---|---|---|
| Neither agree nor disagree | 16.0 | 4 |
| Do not agree | 0 | 0 |
| Strongly disagree | 0 | 0 |

Prior to joining SK, only 32 percent felt strongly agreed or agreed that they had sufficient capacity. When asked about their current capacity, 84 percent strongly agreed or agreed that they have sufficient capacity. This is a variance/improvement of 52 percent. 24 percent of the respondents were inclined to disagree with the statement (i.e. indicating they did not have sufficient capacity prior to joining SK). This percentage declined to 0 percent when asked about the present situation.

**Perceived changes in capacity of respondents: attributed to what organisation**

| **Who played a role in increasing your capacity to process and convey information?** | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| CRI | 72.0 | 18 |
| JRKI | 60.0 | 15 |
| Other NGOs | 16.0 | 4 |
| Other community radios | 28.0 | 7 |
| Independent learning (own initiative) | 52.0 | 13 |

In this question, more than one response was allowed. The changes in capacity from prior to joining SK to the present situation, were mostly attributed to CRI (72 percent), followed by JRKI (60 percent). More than half of the respondents (52 percent) attributed a change in their capacity to their own self initiative. Just over a quarter attributed it partly to community radios, and 16 percent to other NGOs.

**Network of respondents: size & benefits**

| | | Currently, approximately how many organizations do you cooperate with as your network? | | | |
|---|---|---|---|---|---|
| | | Count | Mean | Maximum | Minimum |
| How long respondents have been part of SK | <1 year | 10 | 36 | 215 | 3 |
| | 1-2 years | 3 | 6 | 7 | 5 |
| | 2-3 years | 5 | 4 | 6 | 2 |
| | > 3 years | 7 | 13 | 25 | 3 |
| | Total | 25 | 19 | 215 | 2 |

On average, each respondent has 19 organisations that they consider as their network. However, some respondents only have two to five organisations in their network. Only 40 percent of respondents joined SK expecting benefits from networking, yet 60 percent report that upon joining there was a benefit from networking.

**Network: Combine Research Institute contribution**

| **To what extent do you agree with the following statement: CRI was instrumental in the creation of the network you currently have** | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| Strongly agree | 16.0 | 4 |
| Agree | 72.0 | 18 |
| Neither agree nor disagree | 12.0 | 3 |
| Do not agree | 0 | 0 |
| Strongly disagree | 0 | 0 |

88 percent of the respondents agree that CRI has contributed to facilitating or creating a network around them.

| Do you feel or notice any changes in CRI's role and approach before and after 2012? | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| Yes | 84.0 | 21 |
| No | 8.0 | 2 |
| Don't know | 8.0 | 2 |

84 percent of the respondents acknowledge that there has been a change in CRI's approach since 2012. 62 percent of the respondents see this as a positive change, while less than a quarter are neutral, and around 15 percent see this as a negative change.

| If you have noticed any change, do you feel this is a positive change? | | |
|---|---|---|
| **Answer Options** | **Response Percent** | **Response Count** |
| Very positive | 14.3 | 3 |
| Positive | 47.6 | 10 |
| Neither positive nor negative | 23.8 | 5 |
| Negative | 9.5 | 2 |
| Very negative | 4.8 | 1 |

www.wageningenUR.nl/cdi

Report CDI-15-064

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

# ELSAM end line report

MFS II country evaluations, Civil Society component

Dieuwke Klaver[1]

Centre for Development Innovation
Wageningen, February 2015

Report CDI-15-039

Klaver, D.C., Nugroho, K., Smidt, H., February 2015, *ELSAM end line report; MFS II country evaluations, Civil Society component,* Centre for Development Innovation, Wageningen UR (University & Research centre) and SurveyMETER. Report CDI-15-039. Wageningen.

This report describes the findings of the end line assessment of ELSAM that is a partner of Hivos.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses ELSAM's contribution towards strengthening Civil Society in Indonesia and it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which ELSAM contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain ELSAM's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

# Acknowledgements

SurveyMeter and CDI are thanking the staff and the leaders of all Southern Partner Organisations that participated in collecting information for the evaluation of the contribution of these partner organisations to creating a vibrant civil society in Indonesia. They also thank the Co-Funding Agencies and the Dutch Consortia they are a member of for making background documents available. We hope that this evaluation can support you in better positioning yourself in the Civil Society Arena of Indonesia.

# 1 Introduction

This report presents the civil society end line findings of ELSAM, a partner of Hivos in Indonesia under the Dutch Consortium People Unlimited 4.1. It is a follow-up to the baseline assessment carried out in 2012. According to the information provided during the baseline study, ELSAM is working on the theme 'governance'.

These findings are part of the overall joint MFS II evaluations carried out to account for results of MFS II-funded or co-funded development interventions implemented by Dutch Co-Funding Agencies (CFAs) and/or their Southern Partner Organisations (SPO). They are also intended to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact, and context influencing agency by civil society in general) has been used to orient the evaluation methodology.

**Changes in the civil society arena of the SPO**

In the 2012 – 2014 period the two most important changes that took place in the civil society arena of the SPO were related to 'perception of impact', specifically the influence on public policy and civil society impact with regards to stronger intermediary organisations. More specifically, the capacity of the human rights movement was improved and ELSAM successfully was able to influence a public policy that will afford better protection of witness and victims of human rights abuses. In addition, there was an improvement in the quality of advocacy conducted by ELSAM's network organisations pertaining to the capability of generating and using evidence for policy advocacy.

These findings were obtained through an analysis of documents, a workshop with the SPO, and several interviews. These interviews were conducted with: ELSAM; external resources persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons with knowledge of the MDG or theme on which the SPO is concentrating.

**Attribution**

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. Elsam was selected for a quick assessment.

The first outcome that we looked at is the revised Law on Witnesses and Victim Protection approved in October 2014 after a long advocacy process since 2011 by a coalition of CSOs, of which ELSAM was a part of. The previous Law No. 13/2006 was replaced by Law No.31/2014 because it had fundamental limitations on probes into past rights abuses and had prevented the Witnesses and Victims Protection Agency (LPSK) from helping survivors. This new law will step up LPSK's efforts to support victims of past human rights abuses. The most important factor that explains the outcome is the collaboration of CSOs through a coalition. Most of the advocacy activities were conducted through this coalition and ELSAM's role was the provision of regulatory reviews and the drafting of the bill. Rival explanations were internal demands and pushes within LPSK and public pressure. However, the evaluation found limited evidence for these rival explanations.

The second outcome that we looked at is the improved quality of advocacy work conducted by ELSAM's network organisations through its capability to generate and use evidence to advocate for

policy change. ELSAM's networks organisations, especially at sub-national level have become more systematic in the manner in which data on human rights violations is collected, analysing the situation and responding to victims' need through follow up advocacy actions. ELSAM's role in this evidence-based advocacy system on human rights violations was to provide a platform for data collection and managing a national database system.[1]

**Relevance**

Interviews with staff of ELSAM, external resource persons, as well as contextual information helped to assess the relevance of ELSAM's interventions in terms of; its Theory of Change (ToC) for Civil Society (CS) as designed during the baseline study; the context in which ELSAM is operating; the CS policies of Hivos.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because these two outcomes serve both the grassroots and policy needs. Regarding the context in which ELSAM is operating, its interventions and outcomes achieved are relevant because through the new law of LPSK has the ability to increase their coverage of protection services provided to the victims of human rights violations. At network level, CSO monitoring of human rights violations at the sub-national level can feed into an advocacy agenda or can be linked to LPSK services. Lastly, ELSAM's interventions and outcomes are relevant to Hivos' strategies because ELSAM has adopted an alternative, more moderate lobby approach as opposed to more common 'radical' strategies often taken on by human rights activists in Indonesia.

**Explaining factors**

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within CWM, the external context in which it operates and the relations between ELSAM and Hivos.

The most internal factors that explain the findings consist of the organisational capacity of ELSAM, a smooth change in the leadership in 2010, which was also followed by younger staff taking over coordinator positions. The effective supervision by the board of the changes in leadership, as well as increased participation of ELSAM's members in research design and advocacy also explain the positive findings.

The relations with Hivos have been constructive and ELSAM benefitted from Hivos' other partners in Indonesia, as well as from its long term policy support and the flexibility afforded in the budgetary arrangements.

Other contributing factors to the revised Law on Witnesses and Victim Protection are the political incentives that may have led to support for revision within the parliament. In 2014, with elections approaching, parliamentarians sought out public sympathy in an effort to win votes. For the government's executive, one of the possible incentives for endorsing the revision was that it was considered a trade-off with the push for putting in place a law for a Truth and Reconciliation Commission (TRC). Human rights activities have unsuccessfully been advocating for such a law, which is considered to be highly sensitive.

For human rights organisations like ELSAM and its peers, the biggest challenges in Indonesia are poor law enforcement issues and weak recognition for human rights in laws. The government and security forces who should help enforce the law are, according to human rights organisations, part of the problem as they commit violations themselves or endorse them by not taking actions to oppose violence used by radical groups.[2] Unlike other human rights organisations in the country like Commission for the Disappeared and Victims of Violence(KontraS) and Setara Institute, who address these regulatory gaps by building public pressure, ELSAM has chosen policy advocacy as its main strategy.

[2] KontraS. 2014. *Hak Asasi Diakui tapi Tidak Dilindungi: Catatan Hak Asasi Manusia dimasa Pemerintahan Presiden Susilo Bambang Yudhoyono [2004-2014]*. Available from http://kontras.org/data/Catatan%20Kondisi%20HAM%20-%2010%20tahun%20SBY.pdf (accessed 17 November 2014)

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the governance issues ELSAM is working on. Chapter three provides background information on ELSAM, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Hivos. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in Appendix 2 of the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in Chapter 4. The answers to each of the evaluation questions are being presented in Chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in Chapter 6. Conclusions are presented in Chapter 7.

# 2 Context

This paragraph briefly describes the context ELSAM is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

## 2.1 Political context

### 2.1.1 Brief historical perspective

Indonesia's rise to being the world's third largest democratic nation has been lauded by many world leaders. The county is often considered to be a model Muslim democracy. As the fourth most populous nation with an estimated 250 million people[3], Indonesia has sustained its democratic commitment since transitioning from an authoritarian leadership to a democracy in 1998. The decentralized administration now consists of 34 provinces and 508 districts and municipalities.

Prior to 1998, Indonesia was under strict authoritarian regime. Suharto, known for his so-called New Order (1966-1998) regime, ushered in radical transformations that would place social and political forces under direct state supervision. The defining characteristics of the Suharto era were a focus on economic growth and controlled consensus and political stability devoid of dissent. A series of tumultuous economic and political transitions in the nineties severely diminished the credibility of ageing President Suharto, who was forced to resign amidst mass street protests.

His departure in 1998 laid bare three decades of social inequalities, state-perpetuated abuses against human rights, and a lack of civilian liberties. The regime change opened the way for a period of *Reformasi* started under the presidency of B. J. Habibie (1998-1999) and continued by Abdurrahman Wahid (1999–2001), Megawati Soekarnoputri (2001–2004), and Susilo Bambang Yudhoyono (2004–2014). Restrictions on citizen participation, press freedom and association were removed. Democratic reforms and decentralization led to direct elections, portioned authority, a devolution of authority to regional authorities, formation of new political parties and ended the military's parliamentary influence. The distinct historical periods of the New Order Regime and *Reformasi* (1998-present) have shaped the emergence of civil society. Defining characteristics are summarized in the table below.

Table 1
*Characteristics that have defined the emergence of civil society in Indonesia*

| Characteristics | New Order, authoritarian period (1966 – 1998) | Reformasi (1998 – present) |
|---|---|---|
| **Political system** | Centralized, authoritarian characterized by unipolarity. Golkar as the dominant political party.<br><br>In 1999, there were 27 provinces, 306 districts and around 60,000 villages. | Decentralized, democratic. Fragmentation of power and atomization of patronage relationships. Emergence of numerous political parties. Direct presidential elections since 1999.<br><br>Decentralization altered the political and administrative landscape: 34 provinces, 410 districts, 98 municipalities, 6,944 sub-districts and 81,253 villages[4]. |
| **State-citizen interaction** | Benevolent leader, obedient population. Down to the village level, the state permeated society. | Modern political culture marked by diminishing hierarchy between the state and citizens, allowing for citizens to interact more freely. |

[3] In 2010 the population was estimated to be around 237 million people (BPS 2010 Population Census). The current figure is an estimate from BKKBN and similar figures are cited in the CIA's World Fact Book and the World Bank.

[4] Rumah Pemilu "Gambaran Singkat Pemilihan Umum 2014 di Indonesia", 3 July 2014. Available from http://www.rumahpemilu.org/in/read/3351/Gambaran-Singkat-Pemilihan-Umum-2014-di-Indonesia (accessed 25 October 2014)

| | | |
|---|---|---|
| **Citizen representation and voice** | Strict control of speech, expression and association.<br><br>CSOs and their networks largely "hiding behind the screen",operating under state surveillance. A period of growth occurred in 1995-98, as resistance was building. | Burgeoning of CSOs, pressure groups and NGOs following the political euphoria after Suharto's fall.<br><br>Indonesian CSOs began to establish new networks internationally. Up until the early 2000s the focus was on state-centrist issues. Later, issues that CSOs were tackling became more diverse, ranging from pluralism, poverty reduction to fulfilment of economic, social and cultural rights. |
| **Media** | No free press, censorship and state-control. Suharto had firm grasp over how to use print & broadcast medias to promote political ideologies. | More vibrant media environment, flourishing of media businesses albeit in control of 12 main conglomerates that are mostly profit-driven and often have political ties. |
| | Limited public and CS use and access to internet until mid-90s. | Twitter nation, widespread social media use. |
| | | Growing realization of the importance of media/free press as the fourth pillar of democracy. |
| **Artistic forms of expression** | Art and literary censorship conducted by the state. Art forms were a means to reinforce political order. | Greater freedom of the arts and cultural sectors. Organizations able to hold art events more freely. Freedom of expression a catchphrase amongst individuals and artistic groups, but challenged by more conservative members of society. |
| **Religious expression and organization** | Regime repressed religious groups, especially radical forms. | Emergence of religious groups seeking to restore Islamic values and defend Muslim values. |

With political reforms came greater freedom and space for civic engagement. In the *Reformasi* period, there was a remarkable increase in the number of civil society organizations, many of which were Islamic in character. In 2000, the Central Agency on Statistics (BPS) recorded around 70,000 registered organizations, compared to just 10,000 in 1996[5]. New groups sprung up with donors encouraging activists to establish NGOs they could fund. These organizations were eager to distance themselves from state and often took an anti-government stance. Proliferating CSOs and NGOs have taken advantage of decentralization and greater regional autonomy to engage in public affairs. Civil society and government relations have improved, although both sides remain sceptical of the others' intentions.

### 2.1.2 Recent trends in the political context

Indonesia is considered to be a story of democratic success, but it still struggles to realize the benefits of sustained and equitable economic growth. In the political context, the main challenges lie in governing such geographically vast and decentralized country, applying principles of good governance and the enormous task of reforming the country's bureaucracy.

Although, Indonesia's 'big bang' decentralization initiated at the turn of the century narrowed the gap between local government and citizens, it has also localized political power struggles. While the devolution of authorities relieved tensions between the central government and the regions, it has also created opportunities for corrupt and rent-seeking practices, at the local level. As indicated by Transparency International's corruption index scores, perceived corruption in Indonesia remains high.

[5] Wahid, Marzuki. 2010. LSM, Islam, dan Perempuan di Indonesia Paska Orde Baru. Presentation at the Asian Dialogues: Open Seminars in Asian Languages. Melbourne, 22 April. Available from http://intranet.law.unimelb.edu.au/staff/events/files/Microsoft%20PowerPoint%20-%20LSM%20dan%20Islam%20di%20Indonesia%20--Melbourne%202010-FINAL.pdf (accessed 25 October 2014)

Table 2

*Transparency International's Global Corruption Barometer survey: Indonesia*

| Year | Corruption perceptions Index Score<br>*(0 perceived as highly corrupt and 100 perceived as clean)* | Rank |
|---|---|---|
| 2011 | 30 | 100/182 |
| 2012 | 32 | 118/174 |
| 2013 | 32 | 114/177 |

Source: Transparency International

In 2013, decentralization was taken a step further with the approval of the Village Law, intended to address weak governance arrangements and empower rural communities to participate politically. The new law could also lead to village elites distorting power relations and misusing government funding if not properly monitored.

Indonesia is still transitioning politically and many challenges lie ahead. According to the 2012 Indonesia Governance Index's Executive Report: "Indonesia is witnessing a paradox in its democracy. On one hand, a successful opening-up of civil liberty has led to the avalanche of democratic demands across the nation, however on the other hand, democratic institutions' are inadequately respond to those demands." Nonetheless, the Indonesian Governance Index, which focuses on measuring provincial governance, does show a general improvement in the performance of the government (political office) bureaucracy, civil society and economic society based on principles of participation, transparency, fairness, accountability, efficiency, and effectiveness between 2008 and 2012. Civil society scores improved the most significantly, while scores for bureaucracy rose slightly.[6]

Table 3

*Indonesia Governance Index: Average provincial scores*

| Arena | 2008 | 2012 |
|---|---|---|
| Government | 4.93 | 5.46 |
| Bureaucracy | 5.53 | 5.58 |
| Civil Society | 4.85 | 6.33 |
| Economic Society | 4.77 | 5.71 |

Source: http://www.kemitraan.or.id/igi

In the past decade, Indonesians have generally enjoyed a freedom to participate in the political process through a direct-election mechanism. However, in September 2014 lawmakers voted in favour of a bill reviving indirect elections of regional heads. The controversial vote provoked public outcry which saw peaceful protests and the public voicing their discontent through social media. In early October, just before the end of his term, president Yudhoyono issued a regulation in lieu of the law, effectively repealing the law until further judicial review.

The recent 2014 elections which marked the end of Yudhoyono's 10-year term, demonstrated that Indonesian voters are increasingly voting for popular figures irrespective of political party alliances. While practices of corruption, vote-buying and poor voter administration remained in the recent election, the public seems to have matured politically, indicated by the enormous interest in televised debates between the leading candidates. The appeal of the newly sworn in President Joko Widodo, popularly known as Jokowi, has come from his hands-on, man-of-the-people approach. As Jokowi begins his five-year term he will need to start addressing a myriad of challenges that include corruption, stagnant economic growth, and human rights concerns, particularly with respect to the rights to freedom of expression, peaceful assembly, and religious intolerance. If left unaddressed, these challenges could seriously undermine Indonesia's stability and democratic reforms.

[6] The IGI uses a scale of 1 (lowest) to 10 (highest). Data is available online through their website. Indonesia Governance Index, Data, "IGI Executive Report". Available from http://www.kemitraan.or.id/igi/index.php/data/publication/factsheet/275-igi-executive-report (accessed 25 October 2014)

## 2.2 Civil Society context issues with regards to governance

Several important changes took place during the 2011 and 2014 period. First, the global financial crisis and Indonesia's rise to a middle-income country led to a decrease in international donor funding. Development actors, including CSOs and NGOs, have to compete harder for funding. Some have been more successful than others in diversifying funding by turning to the private sector or private foundations. At the expense of past idealism, local NGOs are now more disposed to receiving funding sources which in the past may have been criticized as supporting neoliberalism.

Regulatory changes also affected the civil society arena positively and negatively. Amongst the more controversial laws to spark reaction was Law No. 17/2013 on Societal Organisations. In an open letter sent before the bill was enacted, CIVICUS said the law would undermine freedom of association and "prevent CSOs from working on sensitive topics related to good governance and democratic reform in the public interest"[7]. FORUM-ASIA deplored the repressive provisions in the law that "leave all groups vulnerable to attacks, undermining the hard-won democratic space that has been forged by civil society since the end of the New Order regime."[8]

On a positive note, between 2011 and 2014, the government did demonstrate a commitment to human rights by launching a National Action Plan on the issue endorsed through Presidential Regulation (Perpres) No. 23/2011. One of the actions contained in the plan was the ratification of 12 international human rights instruments/covenants. By the time this report was written, however, only four instruments were translated into national law: 1) convention on disabled people; 2) migrant workers; 3) involvement of children in armed conflict, and; 4) child trafficking, pornography and child prostitution.

Despite the above commitment, human rights groups have remained critical of the government's dedication to human rights and consider a number of laws to be discriminative or leave people vulnerable to human rights abuses[9]. Laws passed that provoked criticism were amongst others the State Intelligence Law (October 2011) and the Social Conflict Law (April 2012). NGOs and media see these laws as imposing further restrictions on freedom of speech, potentially leading to the criminalization of human rights defenders and signifying a tightening of state control. Discriminatory content was also an issue in discussions on the Religious Harmony Bill in 2013, for which drafting was initiated in despite not being part of the planned National Legislative Program. Late in 2013, the House of Representatives came under fire again for its weak stance against religious intolerance when it re-endorsed a law that limits state-recognized religions to six.

Land rights and natural resource protection have been a long-standing issue for Indonesia. While Indonesia has adopted and amended laws to improve the rights of smallholders and indigenous communities, many of these regulations have faltered in their implementation. Part of the issue lies in the overlap and lack of clarity of laws adopted that regulate different sectors and local legislation. Another issue is that there is a lack of oversight in the procedures such as granting permits and licensing. These problems, which are commonly found across development sectors, are compounded by a lack of information among local communities on what the laws regulate and their rights vis-à-vis them.

[7] Civicus, "Civicus Releases an Open Letter Requesting the Indonesian Parliament to reject the Proposed Ormas Law and Create an Enabling Environment for Civil Society", 10 April 2013. Available from http://civicus.org/index.php/en/media-centre-129/open-letters/1581-open-letter-requesting-the-indonesian-parliament-to-reject-to-the-proposed-ormas-law-and-create-an-enabling-environment-for-civil-society (accessed 27 October 2014)

[8] Azhar, Haris. 2013. Repressive provision in the Ormas law. Statement to The Asian Forum for Human Rights and Development, in Forum-Asia, "Indonesia: Passage of Ormas Bill Condemned, Campaign to Oppose the Law to Continue", Bangkok, 4 July 2013. Available from http://www.forum-asia.org/?p=16305 (accessed 27 October 2014)

[9] Based on KontraS' report (2014), there are 21 sub-national regulations (Perda) that are discriminative and laws that are vulnerable to human rights abuses are the laws on intelligence, social conflict, mass organisation (Ormas), and presidential instruction on handling security disturbances.

# 3 ELSAM and its contribution to civil society/policy changes

## 3.1 Background of ELSAM

ELSAM (Institute of Policy Research and Advocacy) is one of the oldest human rights NGOs in Indonesia. It was established in 1993 by a number of human rights activists and lawyers from YLBHI, INFID, and WALHI. Within the broad objective of supporting the development of a democratic political order through strengthening civil society and human rights, ELSAM has carried out a wide range of activities related to human rights advocacy at both the policy and community level.

ELSAM had a significant role in the ratification Indonesia's ratification of the International Convention Against Torture and the Convention for the Elimination of All Forms of Racial Discrimination in 1998. In 2004, ELSAM successfully worked towards the promulgation of the Truth Reconciliation Commission Law, which is still under review by the Constitutional Court because of the sensitivity of the issue and the powerful opposition of those allegedly having committed human rights violations. Since 2003, ELSAM has studied the violations of civil and political rights in Aceh & Papua; and economic, social, cultural rights in Kalimantan and Sumatra. These studies help the organisation to monitor the implementation process of the International Covenant on Civil and Political Rights (ICCPR) and resolutions by the Economic and Social Council of the United Nations. ELSAM also engaged with the judges of the State Judicial Institution to strengthen their capacities on human rights by means of producing a manual for judges in 2012, together with the Supreme Court. ELSAM's most important strategies are to:

- Lobby and campaign against repressive laws as well as for the ratification by the Indonesian government of major international human rights instruments;
- Conduct studies on the rights of specific categories in society, such as labourers, indigenous people and to reports violations of these rights;
- Educate and train local NGOs and lawyers on human rights in the 'outer' regions;
- Provide legal aid for human rights victims;
- Facilitate the creation of local and national NGOs and human rights coalitions such as the Working Group on the Advocacy against Torture (WGAT) and the Coalition for Justice and Revelation of Truth (KKPK), and;
- Build alliances and/or co-operate with a wide range of organisations at the local, national and international levels.

## 3.2 MFS II interventions related to Civil Society

ELSAM has received funding from HIVOS for two different projects. The first, "Strengthening Human Rights Protection from the Threat of Impunity and Fundamentalism in Indonesia" was completed in March 2013 and had three components[10]:

1. The Settlement of Human Rights Violations to Realize Democracy and a Just Legal System. The interventions of this component all aimed to influence public policies and decrees, relating to the CIVICUS dimension 'perception of impact'. The outcome selected for in-depth process tracing is linked to this component.
2. Strengthening Human Rights Protection from Upcoming Threats of Market Fundamentalism, Religious Fundamentalism, and Communalism in Various Forms. The interventions under this

[10] "Project Number 416-900-1094 -- 2011 ELSAM Report", ELSAM, 2012, p.1

component aimed to defend the interests of human rights victims, which relates to the CIVICUS dimension 'level of organisation', as well to increase the number of individuals that are capable of using human rights instruments offered by ELSAM which relates to 'civic engagement'.

3. Institutional Strengthening of ELSAM as a credible, capable, accountable, and sustainable Resource Centre of Human Rights. This program aimed to rethink ELSAM's position in its environment and may have had relations with the 'practice of values'' dimension of CIVICUS.

The second project, entitled "Internet Governance Based on Human Rights Perspective" (1004945) aimed to integrate the human rights perspective into the debate on internet governance. Other contributions were made by Hivos to support ICT WATCH to ensure the collaboration with ELSAM to develop a website, campaign tools (such as YouTube clips), and a campaign program. This project relates to the CIVICUS dimensions of 'perception of impact' and 'civic engagement'.

## 3.3 Basic information

Table 4
*Basic information*

| | | Details |
|---|---|---|
| Name of SPO | : | ELSAM |
| Consortium | : | People Unlimited |
| CFA | : | HIVOS |
| Start date of cooperation | : | 1 January 2011 |
| MDG/Theme | : | Governance |
| **MSF Project 1** | | |

# 4 Data collection and analytical approach

## 4.1 Adjustments made in the methodology of the evaluation

Based upon project proposals submitted to Hivos and progress reports submitted by ELSAM, an initial inventory was done to assess the extent to which ELSAM had produced the expected results as mentioned in the contracts with Hivos. However the information made available and analysed before SurveyMETER started its data collection in the field was incomplete, and not clear in terms of providing factual information of results and outcomes achieved. Therefore the team encountered difficulties to identify outcomes to be included for the in-depth process tracing, in particular because Hivos is supporting ELSAM on two completely different projects (a very small one on internet governance and another one on human rights protection).

The evaluation team in the field followed the operational guidelines to a great extent, but was unable to have a workshop with ELSAM for an entire day. In practice the workshop lasted three hours, forcing the evaluation team to set multiple follow-up meetings with ELSAM leadership and programme staff which also proved to be difficult. A separate meeting was scheduled to meet board members.

## 4.2 Difficulties encountered during data collection

During data collection the team also experienced the difficulty to obtain 'hard evidence' of ELSAM's roles or contributions in the Coalition for Witness and Victim Protection[13]that lobbied for the revision of the Law on the Witness and Victim Protection because a majority of the meetings conducted to discuss regulatory revisions with other actors were done informally, with little trace or documentary evidence. To triangulate verbal confirmation by coalition members on ELSAM's role, we did content analysis, comparing ELSAM's policy inputs with the approved revised law on LPSK (Law No. 31/2014).

Due to insufficient information acquired during the initial steps of the tracing process, the second model of change had to be revisited often to be revised based on new information found by the evaluation team, which consequently meant that the evaluation team had to collect new evidence for the amended model of change.

The Hivos Regional Office for Southeast Asia has experienced a number of staff changes recently. The evaluation team was unable to interview the staff member who was in charge of the ELSAM portfolio in the 2012-2014 period.

## 4.3 Identification of two outcomes for in-depth process tracing

As already mentioned, the project document analysis did not provide sufficient guidance to focus the in-depth process tracing. The suggestion was made to focus on one *recent* achievement for policy influencing, and one outcome related to strengthening the capacities of organisations that receive the support of ELSAM. However ELSAM's core activities are documentation and research and network

[13] The members of this coalition are: ELSAM, YLBHI, MAPPI FH UI, PSHK, LEIP, KONTRAS, LPHAM, LBH JAKARTA, ICJR, ILRC.

influencing, implying that it does not support intermediate organisations, but is an active member in coalitions like WGAT, KPSK and KKPK that are part of the networks that influence the government.

During the initial evaluation process, the policy influencing outcome selected. This outcome was related to a regulation passed in October 2013 that enlarged categories of human rights victims eligible for protection, compensation and psychosocial services to accommodate the immediate needs of victims. A far more reaching outcome was passed mid-way through the evaluation process, on 17 October 2014, namely the revision of the Law on Witness and Victim Protection just before the new parliament was sworn in.

Based on a follow-up interview with an ELSAM Board Member in November 2014, a second outcome was selected on the increased capacity of sub-national CSOs in monitoring human rights violations through more systematic data collection and analysis systems. This outcome was selected taking into consideration that the one of the key activities identified in ELSAM's Theory of Change was related to networking and improved sources of information. In addition the production of knowledge and data is one of ELSAM's focuses as an organisation.

# 5 Results

## 5.1 Overview of planned and realised outcomes

Table 5

*Overview of results achieved in relation to project plan ELSAM*

| Planned results | | Level of achievement |
|---|---|---|
| Strengthening Human Rights Protection from the Threat of Impunity and Fundamentalism in Indonesia 2011-2012 (RO SEA 1002309) | | |
| Program 1: Settlement of Human Rights Violations to Realize Democracy and Just Legal System | | |
| Result Indicator 1 | The existing human rights violations accountability mechanisms are strengthened and the alternative mechanism is provided | Partially achieved: LPSK develops concept of repatriation for victims of human rights violations promoting the settlement of past human rights violations, including through the mechanism of alternative settlements. Law on Victim and Witness Protection revised. |
| Result Indicator 2 | Collective activities with two networks: the Advocacy Network for the Peaceful Settlement of Past Human Rights Violations and the Working Group on the Advocacy against Torture (WGAT) to promote the implementation of an effective reparation for victims are conducted | Partially achieved: Continued support to the WGAT to lobby follow up efforts to ratify the optional protocol on the Convention Against Torture. |
| Result Indicator 3 | The adoption of the draft Law on Truth and Reconciliation Commission (TRC) is promoted | Achieved (although law not adopted): Joint advocacy on the settlement of past human rights violations, including support to KKPK. Background paper for new bill on TRC prepared by ELSAM and KKPK. Civil society activists managed to become candidate members of Komnas HAM, of whom three ELSAM members. ELSAM's involvement in KKPK has strengthened the coalition. ELSAM set up a database centre for past human rights abuses. Sharpened focus of action of the coalition to promote truth revealing as a modality in peacefully settling the past. |
| Result Indicator 4 | An effective reparation instrument and mechanism for victims of human rights violations is released | Partially achieved: Law on Victim and Witness Protection revised. |
| Program 2: Strengthening Human Rights Protection from Upcoming Threats of Market Fundamentalism, Religious Fundamentalism, and Communalism in Various Forms | | |
| Result Indicator 5 | Advocacy against the victim criminalization in the name of religion is conducted. | Achieved: Through its existing networks, ELSAM has been able to support victims and play a watch dog role with regards to threats from market and religious fundamentalism. Advocacy for the witnesses and victims of religious-based discrimination, pluralism research, monitoring cases of the attacks against minority religious groups, campaigns through the media about religious freedom, and lobby to the government were carried out. |
| Result Indicator 6 | The cases related to the market fundamentalism, religious fundamentalism and communalism are monitored by ELSAM training alumni | Achieved: Cases monitored by ELSAM and its network focusing on human rights abuses (past and present), land rights abuses, agrarian disputes. ELSAM appointed as member/CS representative of joint fact-finding mission with government in response to violent land disputes in Mesuji, Lampung. |
| Result Indicator 7 | ELSAM's recommendation about public policies that covers the right to education, housing, health and the right to job is released | Partially achieved: ELSAM, together with a coalition, were successful in revoking a policy which sought to introduce international benchmarks in state schools, which was considered as discriminating against the poor from accessing quality of education. ELSAM together with a network of NGOs filed a case to the constitutional court to revoke the pilot policy contained in Law on Education. |
| Result Indicator 8 | Alternative concept from ELSAM to the government about human rights protection against market fundamentalism, religious fundamentalism, and communalism is published. | Partially achieved: ELSAM formulated recommendations related to human rights protection from fundament threats and provided their expertise. For example, ELSAM in collaboration with an NGO network and the President's Delivery Unit for Development Monitoring and Oversight (UKP4) worked to influence a Ministerial Decree on plantation licensing, especially to eliminate the concentration of big companies owning plantations. Although this was unsuccessful, the efforts did lead to a |

| | | |
|---|---|---|
| | | revision in the time period available for local communities and the general public to respond to licensing applications put forth by companies (from 7 days to 30).<br><br>Human rights-based local regulation guidelines jointly formulated with Pontianak Institute and accepted by the local government of Sangau. |
| Result Indicator 9 | Civil society groups' effort to fight the policy that push and rectify and tolerate violence in the name of religion is initiated. | Partially achieved: National Workshop on the advocacy for the rights to freedom of religion and belief held in April 2012 with CSOs to develop a national advocacy strategy and plan for drafting an Academic paper for the bill on Protection of the right to freedom of religion or belief. |
| Result Indicator 10 | # of CSOs and individuals who master or make use of the instruments of human rights to face the threats of market fundamentalism is increased | Insufficient information. |
| Program 3: Institutional Strengthening of ELSAM as A Credible, Capable, Accountable, and Sustainable Resource Centre of Human Rights | | |
| Result Indicator 11 | The number of the beneficiaries of ELSAM Resource Center is increased | Insufficient information |
| Result Indicator 12 | The implementation of the concept of ELSAM as a Resource Center is reviewed | Partially achieved: Resource center/library equipped with materials, library collections digitalized, online data center and website developed and maintained. Public access to materials promoted. |
| Internet Governance Based On Human Rights Perspective (1004945) | | |
| Program 4: Human rights perspective is the main reference for internet governance discussion in Indonesia | | |
| Result Indicator 1 | A document on internet governance development strategy based on democracy and fairness is developed. This indicator is the responsibility of the three organizations: Hivos, ELSAM and ICT Watch | Insufficient information available. Unclear what strategy document was expected and what was achieved. |
| Result Indicator 2 | Strategic partners and not strategic partners for Internet Governance Forum are identified. This indicator will be prepared by ICT Watch and will be concluded with ELSAM's baseline study | Achieved: Network developed amongst organisations with similar concerns. Coordination developed with: Indonesian Internet Service Provider Association (APJII); Indonesia Internet Domain Registry (PANDI); the Communications and Information Technology Ministry; the National Commission on Human Rights; National Commission on Violence Against Women; CSOs Networks; Relawan TIK; ICT Watch; ID CONFIG; Indonesian Telecommunication and Information Society (MASTEL); CIPG, Air Putih, Idola.net, ICJR, Arus Pelangi, Erotics Indonesia, Satu Dunia Foundation, AJI Indonesia, PSHK, SAFENET, and Pamflet. |
| Result Indicator 3 | Serial of meetings between government, corporations and civil society. ICT Watch is responsible to identify the relevant topics of internet governance issue with the human rights point of view. ELSAM will conduct the meetings | Achieved: Several discussions held with above stakeholders in ahead of the 8th IGF in Bali. |
| Result Indicator 4 | Studies and publications about internet governance based on human rights, prepared by ELSAM:<br>- Case digest of freedom of information on the internet;<br>- Comparation study information freedom in ASEAN countries;<br>- Pocket book about freedom of information right in internet instruments. | Achieved: 3 studies on the internet governance conducted. 34 materials accessible for public. 3 policy briefs published on planned topics.<br><br>Handbook on Freedom of Expression on the Internet produced. In addition, ELSAM developed a paper "Internet Governance in Indonesia: Problems, Challenges and Development Format". |
| Result Indicator 5 | The availability of campaign materials, prepared by ELSAM. | Achieved: Above materials used for awareness campaign on rights-based internet governance. Apart from the written materials, 3 video talk shows uploaded to YouTube & 6 episodes of radio content for streaming. |
| Result Indicator 6 | Information distribution based on ELSAM's publication will be conducted by ICT Watch. | Achieved: Information distribution conducted over three periods of time: before, during and after IGF event in Bali. |
| Result Indicator 7 | The availability of open discussion on internet governance based on human rights in Indonesia. | Result is not tangible, difficult to measure achievement. Discussion on internet governance held between December 2012 and January 2014. This included a public discussion on the challenges of freedom of expression in the Cyber World |

Sources: ELSAM Reports to Hivos, ICT Watch Report to ELSAM/Hivos.

ELSAM implemented a programme on Human Rights Protection from the Threat of Impunity and Fundamentalism from January 2011 until March 2013 which was financed by Miserior, EED and Hivos (18% contribution) and a separate project on Internet Governance together with ICT Watch and Hivos

from July 2012 until February 2014. The table above shows the level of achievement of agreed results with Hivos. ELSAM programs are much broader than these result indicators, so a brief overview will be given of some of the achievements.

The first programme contained three components. Generally speaking activities have been carried out according to plan, for example ELSAM has been involved in influencing and lobbying for a revised Penal Code, lobbying the ratification of all protocols of the Convention against Torture (CAT), and working in tandem with the CSO coalition on Witnesses and Victims Protection (KPSK) that actively monitors the performance of Witnesses and Victims Protection Agency (LPSK).

One of the components aimed at establishing peaceful settlements of human rights violations by strengthening existing institutions, and by introducing effective reparation mechanisms for victims of human rights violations. Peaceful settlements and support to the victims were sought by ELSAM through campaigns; direct assistance to victims; lobby to government, and; by strengthening the Coalition for Justice and Revelation of Truth (KKPK) and Coalition for Witnesses and Victims (KPSK). ELSAM proposed a trust fund to support victims, which has been included in a bill drafted for a Truth and Reconciliation Committee (TRC), which is still being deliberated because of its sensitivity. To pass this Bill in Parliament requires broad support from CSOs and the government. ELSAM has helped establish a cooperative for the victims, run by the victims.

The end line evaluation has focused on this program area. Between 2012 and 2014 two main results were achieved, namely:

1. Revision of the law on the Witness and Victim Protection Agency (LPSK). Under the new law (No. 13/2014), a repatriation concept for victims of human rights violations has been included. Settlement of the past human rights violations through alternative means as well as through formal means that would involve KKPK, the Coordinating Ministry for People's Welfare/Kemenkokesra and the national human rights commission.
2. Strengthened human rights network. ELSAM developed and disseminated a framework and system for documenting human rights violations. A growing number of organisations are focusing on the importance of settling past human rights violations. They include organisations established and run by victims and other CSOs that come together in the KKPK, which advocates at the national level. Within KKPK, ELSAM coordinates the cluster for data collection and database development. ELSAM facilitated data collection and documentation of past human rights violations by a civil society network through collaborative research and analysis of findings to inform the advocacy agenda. The network spans CSOs from Aceh, Medan, Jakarta, Yogyakarta, Solo, Blitar, Pontianak, Bali, Palu, Makassar and Papua.

Between 2012 and 2014, ELSAM also remained active in two other networks to promote settlement of abuses and protection of victims: the Advocacy Network for the Peaceful Settlement of Past Human Rights Violations and the Working Group on the Advocacy against Torture (WGAT).

The second programme focussed on human rights protection from market and religious fundamentalism and communalism. ELSAM has contributed to the successful judicial review of the Plantation Law, specifically the abolishment of 2 articles that were used to criminalize peasants. The period in which local communities and the public are allowed to respond to licensing applications by companies was successfully extended. In addition, ELSAM and a coalition of NGOs booked success with regards to achieving a judicial review of the National Education System which were considered discriminatory against the access of the poor to quality education. But, the threats of fundamentalism are too large for ELSAM (and its supporting network) to reduce. Civil society as a whole should come to play a more direct role in dealing with fundamentalism. ELSAM's support to protect human rights in the face of fundamentalism has been rather reactive[14].

There is not much information in the progress reports on the third component that concerns internal processes within ELSAM. Although ELSAM's ambition was to digitalise its database and make it available online, as well as link to the HURIDOCS system (an internationally recognized data system

[14] "2007-2011 Evaluation report", ELSAM

that is focuses on human rights abuse documentation), no progress has been reported on this component.

The Internet Governance project has to be contextualised in the light of the 2013 annual Internet Governance Forum (IGF) that took place in Bali. ELSAM produced various documents that were used for campaigning in-country, but despite these they did not manage to revise the Indonesian laws and regulations on internet governance in favour of freedom of expression and the right to seek information.

## 5.2 Changes in civil society in the 2012-2014 period?

### 5.2.1 Civic Engagement

Generally speaking, no change was recorded with regards to civic engagement in the 2012-2014 period. ELSAM is by design politically engaged in sensitive arenas that seek remedy for victims and for truth and reconciliation since its creation in 1993. In this period ELSAM decided to reduce its involvement in the direct provision of services to human rights victims and to reorient their program on providing advisory services to civil society organisations and the government with regards to research and policy influence on human rights. Having been involved in the creation of the Witness and Victims Protection Agency (LPSK) in 2006, ELSAM has continuously monitored the effectiveness of reparation and indemnification by the agency. A number of gaps were identified in the original law establishing LSPK (Law No. 13/2006) and in the definitions for eligibility to repartition. As such, ELSAM though Komnas HAM[15] was involved in improving the categories for eligibility so that more human rights victims could access services provided by, amongst others, LPSK. This had an immediate effect on the number of victims obtaining services: from 750 in the last quarter of 2013 to 1,000 persons in the first semester of 2014.

Throughout the period, ELSAM continued to document human rights atrocities committed and organised for victims to provide testimony of their experiences during critical meetings and/or events to support their lobby and advocacy agenda. Apart from this, victims were consulted to ensure that position papers and policy drafts produced by ELSAM responded to their needs.

A key successful advocacy agenda brought to fruition was ELSAM influence of a revision of the Witness and Victim Protection Law to improve the protection and services already provided through LPSK to witnesses and victims. 2014 was characterised by an increased political engagement by ELSAM because of legislative and presidential elections taking place.

**Score baseline 2012 on an absolute scale from 0-3: 3**
**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.2 Level of Organisation

ELSAM's engagement with other networks in civil society slightly improved in the 2012 – 2014 period. ELSAM remained engaged in a number of coalitions including: 1) Coalition for Justice and Revelation of Truth (KKPK); 2) Coalition for Victim and Witness Protection (KPSK); 3) Anti Forest-Mafia Coalition (KAMH); 4) Judicial Monitoring Coalition (KPP); and, 5) Indonesia's NGO Coalition for International Human Rights Advocacy. The SPO maintains a wide network with NGOs and CSOs working in a range of issues where human rights is a concern. ELSAM also holds an important membership position in the National Human Rights Commission (Komnas HAM). ELSAM's contribution to networking remains one of its strengths as an organisation.

[15] ELSAM assisted Komnas HAM and LPSK to streamline their procedures in handling the victims as there were delays in service provision due the incompatibility of systems. This resulted in the signing of a MoU on how to streamline their services to the victims through alignment of eligibility procedures in June 2014.

KPSK, of which ELSAM is a member, intensified its lobby in early 2014 to ensure that a new law regarding Witness and Victim Protection was promulgated in October 2014, just before the new parliament was sworn in.

Apart from this, ELSAM together with the Public Interest Lawyers Network (PIL-NET) reviewed the 2004 plantation law and worked with ICT Rights Watch on internet governance. ELSAM expanded its network with Indonesian research organisations working beyond the human rights scope in 2013 by securing funding from Knowledge Sector Initiative, a five to eight-year Australian Government-funded initiative in 2013 to strengthen ELSAM's capacity in knowledge production and to improve its evidence based policy advocacy. This is an indication that the SPO has the capacity to diversify its financial sources.

As already described above, ELSAM decided to decrease its direct involvement with human rights victims, implying fewer interventions to defend their interests.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.3 Practice of Values

Since the baseline there have been no changes in how decisions are made within ELSAM or in how it applies transparency or internal accountability measures. ELSAM is an independent association (*perkumpulan*) that works with human rights activists, academia lawyers and other NGOs. ELSAM has a board, members of association, and an executive arm. The board and the executive meet on a regular basis. The composition of both remains unchanged since the baseline, with three of the five board members and 40 percent of the members of association being women. A new chairperson of the board, a well-known women's activist, was selected to hold the position for the period 2014-2019 (replacing a male human rights activist). The current female executive director will end her second term in 2015.

When the baseline was conducted in 2012, ELSAM could not provide an audited financial report for 2011 and 2012. During the end line evaluation, ELSAM was able to provide both. The 2013 audit report has been completed but the report is not yet available. In this regard, there have been no changes in the way the organisation conducts financial auditing.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.4 Perception of Impact

ELSAM has two main direct clients: individual victims of human rights violations and CSOs. On Client satisfaction, in the absence of regular monitoring data on client satisfaction, the interviews conducted for this evaluation reported high satisfaction of what ELSAM has done for them (based on two testimonies of clients). In addition, observation of ELSAM's website and Twitter account do not show any evidence of the use of public forums to provide feedback or launch complaints.

At the organizational level, the Commission for the Disappeared and Victims of Violence (KontraS) and the National Commission for Human Rights (Komnas HAM) expressed their appreciation for continued support and leadership of ELSAM in the Coalition for Justice and Revelation of Truth (KKPK). For Komnas HAM and KontraS, we can conclude that their level of satisfaction remains the same.

On the SPO's civil society impact, the role of ELSAM as a 'knowledge organisation' that feeds their networks with data to promote human rights protection is acknowledged by the coalition members. However, there is no significant difference, in this area compared with situation in 2012.

With regards to the strategy to increase their contribution to CS arena, in 2014 ELSAM introduced a new focus to their mid-term plans, namely to:

1. Improve their communication's strategy for producing better knowledge for use by policymakers and civil society to strengthen their advocacy strategies;
2. Maximize the use of ICT to expand the outreach for dissemination and potential beneficiaries; and

3. Reform the internal 'corporate culture' of ELSAM, including strengthening leadership, organisational performance enhancement through a better planning, monitoring and evaluation system, and strengthening staff capacity.

This new focus is a good reflection of where ELSAM has been able to demonstrate its strengths, namely in representing marginalised groups, in this case victims of human rights abuses and minorities, and influencing policies and practices to take up the concerns of these groups and to ensure an adherence to human rights principles.

During the baseline, ELSAM's contributions to CS arena were identified as providing data (research) and training for human rights activists (up to 350 trainees). These roles seem to have decreased due to a reliance on project-based funding to implement the activities. On provision of data/knowledge to other CSOs, there were two activities implemented by ELSAM with regard to their role in CS arena: 1) improving information and documentation systems, including the production of user-friendly information on human rights research findings and data for usage by other CSOs[16], and; 2) increasing the number of users accessing information through the web by digitizing 13,876 human rights documents.

ELSAM's relation with government agencies remains the same; they maintain their reputation as a 'moderate 'human rights organisation. For example, ELSAM was appointed as a CS representative to take part in a joint fact-finding mission with the Coordinating Ministry for Politics, Law and Security (Menkopolhukam) in response to violent land disputes between communities and plantation companies in Mesuji, Lampung –while KontraS, in other hand, is seen as "hard-line" defender in this case. ELSAM was also well positioned vis-à-vis the Office of the President and Komnas HAM to continue to push for the disclosure of truth about past human rights violations.

In terms of service delivery, in the baseline, ELSAM reported support to the public sector officials through a series of trainings for local law enforcers (police, public prosecutors and judges at the lower, higher and supreme courts) to instil human rights standards. In the last two years, these trainings were discontinued due to change in program strategy that now focuses on policy advocacy[17].

On ELSAM's relation with private sector agencies, there has been a strategy shift in the last two years. On the one hand, ELSAM continues to advocate for poor and/or land-less farmers who come in conflict with plantations companies occurring in Medan, North Sumatra; Ketapang, West Kalimantan; Kebumen, Central Java; Batanghari and Sarolangun, Jambi; and Blitar, East Java. Findings from investigations carried out by ELSAM were submitted to the National Commission on Human Rights (Komnas HAM), the Indonesian national police, and LPSK. This successfully sparked responses from each of the agencies that sought to protect and provide reparations for those affected in the land dispute with the private companies. Besides this more confrontational approach, ELSAM has employed a voluntary approach through which it seeks to promote better company practices. It has produced a manual for companies on "how to do business without violating human rights".

One major outcome of ELSAM has been its continued efforts to improve the regulatory framework for the Witness and Victims Protection Agency (LPSK) by engaging in a CSO coalition. In 2014, a revision was passed of the original Law that saw the establishment of LPSK in 2006. In addition to that, ELSAM contributed to improved governance of Komnas HAM and LPSK in handling the victims of human rights violations by improving the procedures for granting statements for victims and their families (Regulation No. 004/Komnas HAM/X/2013, for example). A Memorandum of Understanding (MoU) was also signed between Komnas HAM and LPSK on 25 June 2014 to secure an agreement on better coordination in handling victims. Linkages were maintained with CSOs and grassroots organizations such as the Solo Survivors Network and similar victim organisations in Palu and Jakarta

**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.5 Civil Society Environment

As an organization with a broad mandate to defend human rights ELSAM needs to stay abreast with concerns of its constituents, the general public, whilst monitoring policy developments in the country. In this regard, ELSAM collaborates with other human rights organisations to monitor the situation. ELSAM has demonstrated an ability to remain relevant to contextual developments. For example, it engaged with ICT Watch to campaign for the preservation of the right to expression in the area of internet governance, taking advantage of the existing momentum in the lead up to an international conference. In the run up to the presidential elections, ELSAM stepped up its campaign messaging on the human rights backgrounds of running candidates. On a another issue, ELSAM joined forces with a host of civil society organisations to protest the parliamentary approval of direct elections of regional heads of government, considering this to be an infringement of people's political rights.

While ELSAM has been successful in influencing the policy formulation process and in lobbying for human rights to be upheld, the organization has been less successful in addressing how policies are implemented, and poor law enforcement is common problem in Indonesia, not only in human rights issues. Although new policies and commitments to upholding human rights are made by the government, there continues to be a wavering of its actual response to human rights abuses, violence and discrimination. In the future, ELSAM may need to think of how it positions itself to push for a better translation of the human rights lingua franca in policies to practice.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 1**

## 5.3 To what degree are the changes attributable to the Southern partners?

This paragraph assesses the extent to which some outcomes achieved can be "attributed" to ELSAM. Starting with an outcome, the evaluation team developed a model of change that identifies different pathways that possibly explain the outcome achieved. Data collection was done to obtain evidence that confirms or rejects each of these pathways. Based upon this assessment, the evaluation team concludes about the most plausible explanation of the outcome and the most plausible relation between (parts of) pathways and the outcome. The relations between the pathways and the outcomes can differ in nature as is being explained in table 6.

Table 6

*Nature of the relation between parts in the Model of Change*

| Nature of the relation between parts and other parts or outcome | |
|---|---|
| The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient) |  |
| The part does not explain the outcome at all: other subcomponents explain the outcomes. |  |
| The part explains the outcome but other parts explain the outcome as well: there are multiple pathways (sufficient but not necessary) |  |
| The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient) |  |
| The part is a contributory cause it is part of a 'package' of causal actors and factors that together are sufficient to produce the intended effect. |  |

Sources: Mayne, 2012; Stern et al, 2012

The following paragraph assesses CWM's contribution to two outcomes. Each paragraph first describes the outcome achieved and the evidence obtained to confirm that the outcome has been achieved. It then presents the pathways identified that possibly explain the outcomes, as well as present information that confirms or refutes these pathways. The last section concludes in the first place about the most plausible explanation of the outcome, followed by a conclusion regarding the role of the SPO in explaining the outcome.

Two outcomes were selected to measure the degree of MFS-II effectiveness. These were:

- Outcome 1: Revised Law on Witness and Victim Protection;
- Outcome 2: ELSAM's network organisations are more capable of data collection and analysis for use in local advocacy.

### 5.3.1 Revised Law on Witness and Victim Protection

On 17 October 2014, a revised Law on Witness and Victim Protection was formally put in place following parliamentary approval in September 2014. Law No. 31/2014 replaced Law No. 13/2006. The new law is a major milestone for human rights organisations who have lobbied for changes for over four years. The implications of the new law for human rights are as follows:

- Expanded coverage of services for victims of human rights abuses, which now includes victims of trafficking, terrorism, sexual abuse and other crimes;
- Clarity on the types of protection services provided to the witnesses, justice collaborators and corruption whistle-blowers and special treatment for the child witnesses;
- Strengthened authority of the Witness and Victim Protection Agency (LPSK), established in 2006, in its ability to request the police to provide protection services[18].

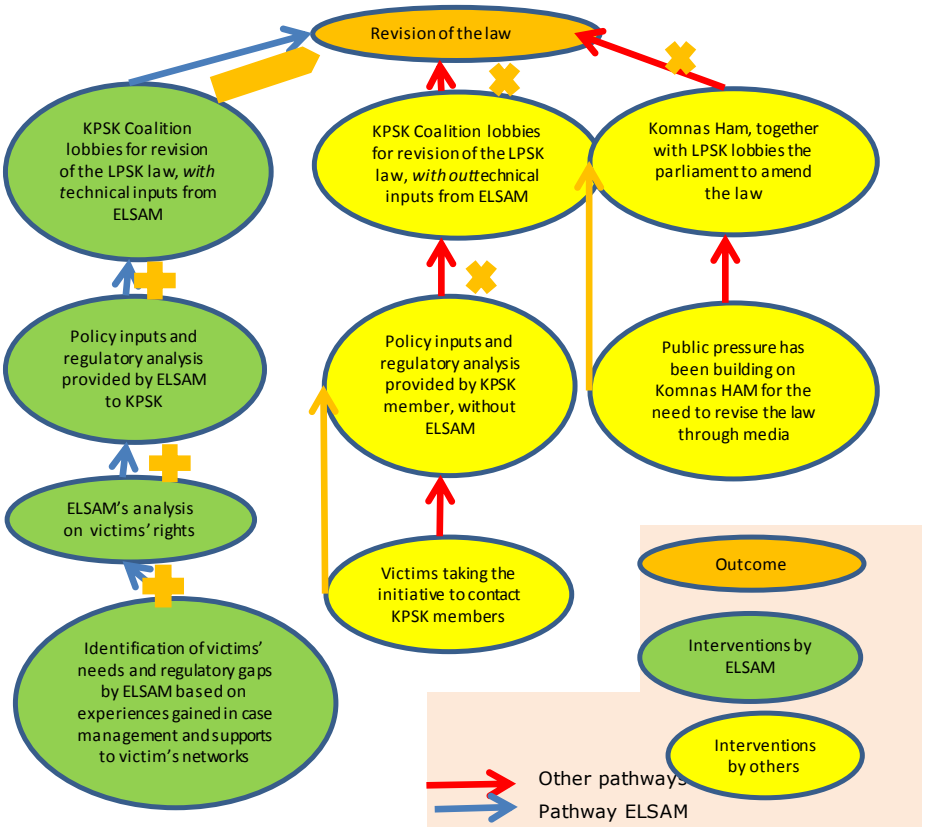

***Figure 1:*** *Pathways that possibly explain outcomes and conclusions about the nature of the relations between pathways and the outcome, law No. 31/2014*

**Causal pathways**

The Model of Change in Figure 1 presents three different pathways that may explain this outcome:

1. The first pathway is that ELSAM developed policy inputs based upon research, which were shared and discussed with the Coalition for the Protection of Witnesses and Victims (KPSK) of which ELSAM is a member. This coalition actively monitored the implementation of the 2006 Law since its 100 first days of its implementation[19]. In doing so inputs and information from victims and LPSK were used to inform the need for the formulation of an amendment of the 2006 Law. Based upon research conducted by ELSAM in 2010-2011 and data provided by another coalition member,

[18] Hukum Online, "RUU PSK Jadi UU, Era Baru Perlindungan Saksi dan Korban: ICJR mash melihat beberapa kelemahan dari UU PSK hasil revisi", 24 September 2014. [19] See KPSK Position Paper # 5 Tahun 2008 written by ELSAM (Lead), ICW, YLBHI, ICJR on 100 days of LPSK.

the Commission for the Disappeared and Victims of Violence (KontraS), ELSAM developed an Academic Paper followed by a draft proposal of the amending bill. After the proposal was discussed and accepted by the Advisory Committee of the President, the bill was tabled in Parliament in 2014.

2. In the second pathway, human rights abuse victims took the initiative to link with CSOs/NGOs to start lobbying the government and parliament, without any ELSAM involvement.
3. In the third pathway, the government-led National Commission for Human Rights (Komnas Ham) together with LPSK lobbied the parliament to amend the law. Public pressure had been building for the need to revise the law through media exposure and from victims groups since the implementation of Law in 2006.

**Information that confirms or rejects the pathways**

*Information that confirms pathway 1*
Even before the former 2006 Law was put in place, ELSAM had been critical of the legal foundations offering witness and victim protection. In 2006, the head of ELSAM's legal service unit at that time, Supriyadi Widodo Eddyono, authored a policy paper on witness and victim protection entitled "The Forgotten Witnesses of the Criminal Justice System: Critical Notes against the Witness and Victim Protection Bill"[20].

In 2007, one of the Deputy Program Directors of ELSAM was selected to head LPSK for the 2008-2013 period. He remained a member of ELSAM until he was chosen to be one of ELSAM's five board members for the 2010-2014period. ELSAM has thus been strategically linked to LPSK since 2008.

ELSAM has been a member of KPSK since 2001, along with organisations like the Indonesia Corruption Watch (ICW), KontraS, WALH, Sawit Watch, TuK Indonesia, YLBHI, LBH Pers, ICJR, YLBH Universalia[21]. The KPSK secretariat is also located in the ELSAM Office in Jakarta. ELSAM's role in the drafting of Law No. 31/2014 as a KPSK member was also confirmed by other coalition members from KontraS and from IKOHI.

In 2010, discussions on the revision of Law 31/2006 gained momentum and an email was sent by LPSK in November 2010 clearly stating ELSAM as the lead drafter of the Academic Paper. Since then there has been evidence of ELSAM's involvement, not only in discussions on the revision but also through the provision of policy input. In May 2012, during a workshop hosted by LPSK with CSOs and NGOs, the role of ELSAM in KPSK in conducting policy/regulatory research was clearly stated. Available meeting records organised by KPSK and victims to discuss the revision of the Law show that ELSAM was present in at least 4 meetings (19 November 2010, 2 January 2013, 17 & 28 June 2013). In June 2014, KPSK provided further input to the law proposing the inclusion of the protection of child witness into the law; this paper was co-authored by two of LPPSLH's Deputy Directors (Zainal Abidin and Wahyu Wagiman).

The new law has taken up a number of ELSAM's and KPSK's inputs reflected in a Position Paper published in June 2014[22]. One of KPSK policy inputs policy inputs in May 2013 stated that the protection should be expanded to whistle-blowers, justice collaborators, and victims of terrorism, sexual violence, and human trafficking. This, as well as the input to protect child witnesses (proposed in a KPSK Position Paper in June 2014) has been taken up in the revised law.

*Information that rejects pathway 1*
In June 2010 a hearing took place during which Commission III and LPSK discussed challenges in LPSK's institutional performance. During the hearing, LPSK received support from Commission III to revise Law No. 13/2006[23]. In 2011, LPSK proposed unsuccessfully for the revision to be taken up in the government's legislative agenda for 2012[24].

Not all recommendations put forth by KPSK in June 2014 were taken up in the final revision of the Law.

*Information that confirms pathway 2*
None

*Information that rejects pathway2*
All information confirming pathway 1 rejects pathway 2. In addition, there is no evidence of any other CSOs or human rights defenders in Indonesia lobbied for a revision of the law without engaging with KPSK. In fact, the membership of the coalition is quite extensive with all major human rights lobby NGOs or groups (YLBHI, KontraS, Setara, Imparsial, ICW, ICJR, LBH) being a part of KPSK. There is also an internal mechanism for the division of work. For example KontraS leads any activities relating to the Munir case, KontraS and Imparsial lead advocacy, and ELSAM concentrates on LPSK issues. Active individuals of the KPSK coalition who are also closely involved in LPSK include Wahyu Wagiman, Supriyadi Widodo Eddyono, Zainal Abidin, Syahrial Wiryawan Martanto, and Emerson Yuntho (three of whom are or have worked with ELSAM). As a host of the KPSK's coalition, ELSAM reviews formal policy inputs released by KPSK.

Abdul Haris Semendawai was the head of LPSK until 2013[25] and his name appears on a proposed draft revision of the Law dated 16 May 2013[26]. It is implausible that ELSAM was not involved considering Semendawai was a program director with ELSAM before joining LPSK.

*Information that confirms pathway 3*
There is a working relationship in place and coordination between Komnas HAM and LPSK takes place regularly[27]. Both agencies collaborate to identify victims and witnesses requiring protection and application of victims of human rights abuses requesting LPSK protection need to be verified by Komnas HAM[28]. Both LPSK and Komnas HAM have the right to propose law revisions. LPSK pressured for the revision to be part of the legislative agendas in 2011, 2013 and 2014 (as evident from media coverage and LPSK publications on its website).

Komnas HAM and LPSK did organise meetings with civil society and victims to discuss their needs. For example, on 13 June 2014 Komnas HAM organised a meeting with victims[29]. On May 30, 2012 LPSK organised a meeting with civil society elements, which included KPSK members[30].

*Information that rejects pathway 3*

In an editorial published by LPSK in 2012, Komnas HAM was not mentioned as an actor pushing for the revision of the Law[31]. While LPSK has admitted to the media that many actors have supported the revision of the Law, it does not specifically mention a role Komnas HAM[32].

For Komnas HAM itself - who has a mandate to monitor international human rights treaties, investigate the implementation of human rights, cooperate with agencies for the protection of human rights and disseminate information about human rights[33] – the revision of Law No. 13 was less a priority since it does have direct implications on its roles and functions. Rather, Komnas HAM has focused on proposing the revision of Law 39/1999 on Human Rights and Law 26/2000 on Human Rights Court, which have more direct consequences for its mandate.

In the May 2012 meeting organised by LPSK, KPSK members pushed for the need to change the procedures of LPSK since the bureaucratic obstacles (particularly the requirements of a Komnas HAM statement to be issued to applicants) that impeded victims from accessing their rights to compensation, restitution and rehabilitation[34].

**Conclusion**

Based upon the analysis of the information available, we conclude that the most valid explanation for the amendment of the Law is that the coalition members provided inputs, including assisting LPSK in drafting the Academic Paper, the draft Law, and other forms of policy inputs. LPSK played an important role in the process, such as by taking a lead in proposing for the law revision to be taken up in the legislative agenda. As such external pressure was needed to raise the stakes and enhance support for the revision of the law. This is evident from the failures of getting a revision endorsed in 2011 and 2013 despite being a part of the legislative agenda.

Other external factors also contributed to the parliamentary approval of the revision. These include mounting public pressure, dissatisfaction over LPSK's services, the President's commitment to uncovering the culprits of the Munir murder in 2004, the impending end of the parliament's term and the upcoming elections, endorsing the revisions was considered to be a trade-off with more controversial regulatory proposals (TRC), and increased attention to the lack of satisfactory legislation to deal with whistle-blowers in high profile corruption cases.

Given ELSAM's role in KPSK and its personal relations with the head of LPSK, it is plausible to assume that were well positioned to influence the revisions. ELSAM's role was: *necessary* but not *sufficient*. ELSAM provided technical expertise, drafted policy inputs, and utilized their experience in working with victims and LPSK to identify gaps.

### 5.3.2 ELSAM's network organisations are more capable of data collection and analysis for use in local advocacy

The second outcome that the evaluators looked at was the improved capability of CSO networks that receive support from ELSAM in documenting human rights violations as a means to help influence policies. Prior to MFS II funding, ELSAM already had established a network of CSOs at both national and sub-national level. But compared to the 2012 situation, ELSAM has received more systematic

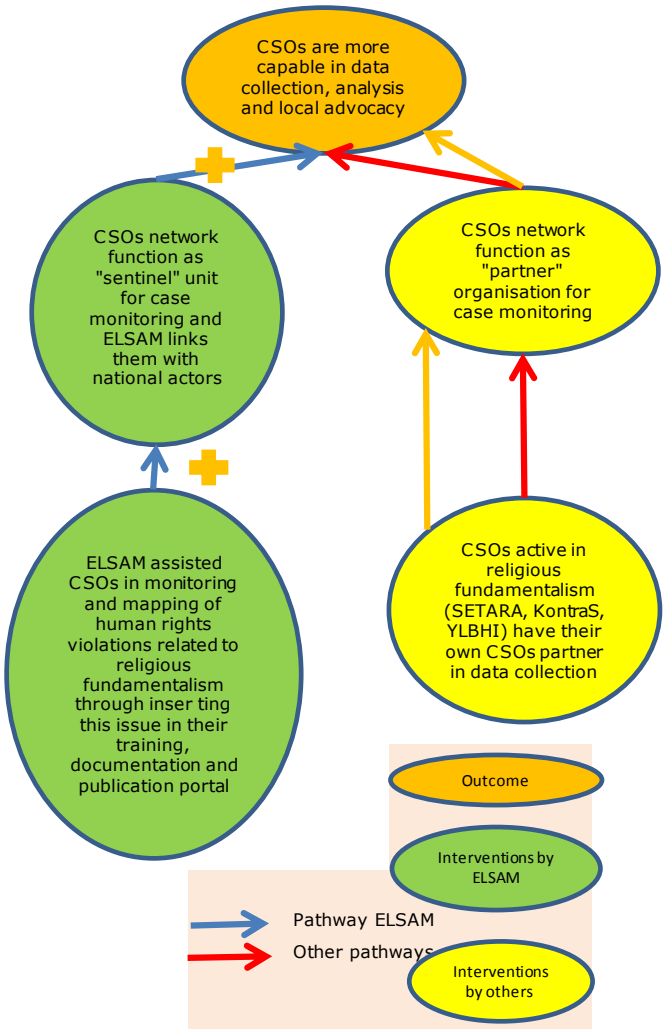

***Figure 2:*** *Pathways that possibly explain outcomes and conclusions about the nature of the relations between pathways and the outcome, capacity of CSOs*

information through its network, which has allowed it to expand the number of reports produced. In 2012 only a number of subnational cases were covered in ELSAM's national report.[35] In the first semester of 2014, by comparison, there was a better analysis of the types of the violations, impacts and the settlement of these.[36]On freedom of expression violations, in 2011, there were only 2 cases documented, and in 2013, ELSAM documented 18 cases received from its networks and correspondents in more than 15 districts. There is no evidence at partner level since the outcome was suggested by ELSAM's board member and confirmed in minutes of a KPKK meeting of the Coalition for the Disclosure of the Truth (KPPK) on 4 January 2013, and by ELSAM's documentation on the online portal.

**Causal pathways**

The Model of Change in figure 2 presents two different pathways that may explain this outcome:

1. The first pathway that explains this outcome is that ELSAM supported CSOs in monitoring and documenting human rights violations. ELSAM provided the basic framework for the analysis of human rights violations: vertical (by state) abuses; horizontal (communal), and gender-based violence to their 375training alumni covering at least 30 CSOs across Indonesia. The cases related to market fundamentalism, religious fundamentalism and communalism were monitored by ELSAM's training alumni. ELSAM developed a content management system to record human rights abuses that is published on its website[37]. Based on these cases, the CSOs and ELSAM can develop recommendations for law enforcement, improved service delivery for the victims to prevent victim retaliation that may violate the law, and policy change agendas.
2. In the second pathway other CSOs (YLBHI, KontraS, Setara) are looking after the sub-national CSOs for human rights monitoring.

**Information that confirms or rejects the pathways**

*Information that confirms pathway 1*
ELSAM's first joint human rights monitoring report with other CSOs (LBH, INFID and WALHI) was produced in 1993 on the topic of human rights violations in Indonesia's family planning program and the construction of a dam in Central Java (Kedung Ombo). ELSAM continues to publish and author annual human reports on the human rights situation in Indonesia. Beginning in 2012, ELSAM started providing space for local organisations (victims organisations like IKOHI, for example) to contribute in the report.

ELSAM strengthened the supply side by providing a framework for human rights monitoring to network organisations. ELSAM's technical assistance to CSOs in documenting human rights cases is in the form of managing a special portal where their network provides information. ELSAM's website: http://www.dokumentasi.elsam.or.id/ contains data and information on human rights violations that are sourced from the reports from ELSAM's network, submissions by email, phone or SMS, and the monitoring of print and online media. Network organisations also use ELSAM's website to disseminate their reports and data[38]. ELSAM reports that they have provided training to some 30 CSOs across Indonesia. Until the end of 2013 ELSAM provided 13 trainings had been conducted for of 375 people[39]. Meetings were organised by ELSAM to discuss the needs for consolidated data and assisted network organisation in data collection analysis. In the first quarter of 2012, ELSAM started producing quarterly human rights updates informed by reports from CSO partners. In June 2013, in a meeting with CSOs partners, ELSAM discussed the need to have a consolidated report (Source: meeting notes ELSAM CSO

[39] Facebook, Lembaga Studi dan Advokasi Masyarakat (ELSAM), "Undangan Mengikuti KursusHAM untuk Pengacara". Available from https://id-id.facebook.com/permalink.php?story_fbid=10151749606224811&id=130077823697089 (accessed 27 November 2014)

28 June 2014). A number of consolidated reports have been produced since. For example, in October 2014, KPKK launched a monitoring report of human rights abuses in which primary data was provided by KPKK members, managed by ELSAM[40].

Network organisations confirmed ELSAM's role in data management. An interview conducted with Rumah Kitab, an NGO working on gender and women's rights issues confirmed that ELSAM has a significant role in monitoring data. By comparison, the role of the Indonesian Legal Aid Foundation (YBHI) in the area of data management has been shrinking.

*Information that rejects pathway 1*
None

**Pathway number 2**

*Information that confirms pathway 2*
ELSAM does not have offices established at the sub-national level and thus has less frequent and less intense communication with its network organisations. Other human rights organisations like YLBHI do have a network at the sub-national level, and organisations like Setara and KontraS collect and publish data and information obtained through a similar network to ELSAM.

*Information that rejects pathway 2*
From information obtained through the Asia Foundation, the evaluation team learned that YLBHI no longer has the ability to coordinate data collection through its subnational network due to a lack of funds. Setara[41] and KontraS[42] do not support regular updating by subnational networks. Rather, they collect data depending on specific needs or policy agenda. The evaluation team reviewed some of the Setara and KontraS reports and found that the publications tend to be more like situational analysis and not an analysis of trends from regular data updates.

ELSAM is in a better position to link CSO networks and links them with human rights service providers such as Komnas HAM and LPSK. On 4 October 2013, ELSAM provided policy inputs to Komnas HAM on how to improve their procedures for endorsing the applications of victims that want to obtain services from LPSK.

**Conclusion**
Based upon the analysis of the information available, we conclude that the most valid explanation for the stronger human rights data monitoring is ELSAM's support to its CSO partners at the subnational level. ELSAM's website allows for members to contribute data and information on human rights violations and upload their reports. This has also assisted ELSAM at the national level in its lobby efforts, such as with the revision of Law on Witness and Victim Protection. ELSAM's support – in the form of providing a data management framework, creating a web-based database, and linking to national service providers - is *necessary but not sufficient* as past support from organisations like YLBHI may have also contributed to improved monitoring: Although KontraS and Setara's approach may not be to monitor data trends, they provide other valuable inputs to subnational networks.

[40] Kartika Virgianti, "3-4 Oktober, KKPK Rilis Laporan Pelanggaran HAM Masa Lalu", *SatuHarapan.com*, 2 October 2014. Available from http://www.satuharapan.com/read-detail/read/3-4-oktober-kkpk-rilis-laporan-pelanggaran-ham-masa-lalu (accessed 27 November 2014)

[41] SETARA Institute for Democracy and Peace is an NGO that conducts research and advocacy on democracy, political freedom and human rights. Its core research focused in answering the actual need of society. Its establishment in 2005 is to response on fundamentalism, discrimination and violence on behalf of religion and morality in many fields that threat the pluralism and human rights. SETARA Institute works in secular space (human rights and constitution based) and did not penetrate to religious theologies. SETARA Institute is a pioneer for Condition of freedom of religion/belief report in Indonesia, which influences the promotion on civil freedom and policy change to push pluralism and human rights.

[42] KontraS (Commission for the Disappeared and Victims of Violence) in Indonesia is a human rights NGO that deals with human rights issues in Indonesia, particularly civil and political rights. Abolition of the death penalty is one of its advocacy objectives.

## 5.4 What is the relevance of these changes?

### 5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

The results achieved in the period 2012-2014 are in line with ELSAM's Theory of Change (ToC) in 2012. As stated in the baseline, in its vision and strategy, ELSAM seeks to promote a democratic political society by empowering civil society through advocacy and the promotion of human rights. The SPO has maintained its focus on lobbying and campaigning for better laws that promote human rights. ELSAM continued and strengthened the monitoring, analysis and reporting on human rights abuses at the national and subnational levels. Information has been made accessible to the public through ELSAM's website.

The strategies employed by ELSAM have been successful in improving the responsiveness and effectiveness of handling the reparations of human rights violations. A number of initiatives have responded to religious and market fundamentalism, but this has been limited to a handful of high-profile cases where ELSAM documented and disseminated their findings to government institutions, calling for better protection. Full settlements of human rights violations through mechanisms like the Truth and Reconciliation Commission (TRC) remain unattainable; however this reflective of the context and the sensitivity of such matters.

One area of work that did not appear explicitly in the ToC in 2012 was ELSAM's efforts in collaboration with ICT Watch on the issue of internet governance. Nonetheless, this fits with the organisation's overall vision as the efforts focused on researching the human rights perspective of internet governance, promoting freedom of expression as a basic right, and incorporating a human rights perspectives into preliminary discussions on internet governance from the get-go.

The achievements attained are justified as the ToC's main assumption rested the interaction between public pressure created by CS networks and a pro-human rights government (i.e. political will). Between 2010 and 2012, the government has applied human rights rhetoric, supported by blandishments but addressing human rights abuses and violations fully continues to be a highly political and sensitive issues. With regards to creating public pressure, ELSAM has played a critical role by documenting cases of human rights abuses and using its extensive experience and knowledge to provide policy inputs whilst working with a range of network organisations with shared values and interests.

### 5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

When Law 13/2006 was passed, Indonesia was hailed for improving the protection available to victims and witnesses. However, it took two years to establish LPSK, and another two for gaps to be identified in its mandates and procedures for service delivery. Deficiencies identified early on included the lack of protection for victims of sexual violence[43]. LPSK's service coverage remained limited, partly because of the complex and incoherent procedures for seeking reparation, as well as the lack of political will for reparations[44]. In addition, the Law included a narrow definition for witnesses and ambiguity over when the state was obligated to protect them, including whistle-blowers. More ironically, in 2010 and 2011, high-profile corruptors from within the state apparatus "discovered that the Law on Witness Protection can be used as a means to evade corruption investigations" by seeking out the help of LPSK to avoid arrest and interrogations[45]. Against this backdrop, a new law was long awaited and public pressure

was mounting. Momentum was also gained as the parliamentary and administration's terms were drawing to a close in 2014.

With respect to ELSAM's longstanding role in human rights abuse monitoring, investigation and reporting, an improved online system to manage and disseminate data and information is welcomed progress. In Indonesia the Internet is an important means for communication and the government is adopting e-government systems. Data and information systems are also being espoused to monitor progress and inform policy decisions. The National Violence Monitoring System (NVMS) was developed by the Habibie Centre and adopted by the Coordinating Ministry for Human Development and Culture (formerly Kemenkokesra). Like ELSAM's data system, NVMS relies predominantly on media reports. Given such developments, it is important to maintain independent or 'shadow' reports and data that may offer an alternative view of the government's performance and continue to monitor compliance with human rights treaties and national legislation.

Also of note has been ELSAM's more recent and innovative work on internet governance. Indonesia has one of the largest number of internet users in the world (a quarter of its population)[46]. There has been an absence of legislation and laws to regulate Internet usage and protect human rights. Laws that do exist tend to be about exercising control and this has led to the criminalization of freedom of expression, cybercrime and unregulated filtering or blocking of content. In 2003, Indonesia was set to host the Internet Governance Forum (IGF). This created an opportune momentum to discuss internet issues given the absence of any concentrated efforts in the area. ICT Watch partnered with ELSAM to develop timely and relevant policy messages and public campaigns in the lead up to the IGF summit.

### 5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

Hivos' long-term partnership with ELSAM falls under its Rights and Citizenship Programme, which aims to the recognition of human rights and women's rights, good governance and a pluralistic society[47]. Support is also in line with Hivos' 2008 Vision Paper on Civil Society Building, describing the CFA's appreciation for "the development of alternative policy options, the defence of the interests of disenfranchised groups, monitoring implementation of policies"[48]. ELSAM's efforts are contributing to legislation and policy that guarantees the rights of citizens. Hivos supported ELSAM's due advocacy on human rights issues, particularly on impunity and human rights violations[49].Hivos' first contract with ELSAM started in 2000 and recent support fell under ELSAM's donors' consortium together with EED and Misereor.

Another reason why Hivos continued to support ELSAM in the MFS II period was to cope with organisation challenges and regeneration caused by the departure of its director in 2010. Hivos also expected ELSAM to shift focus from concentrating on past human rights violations to more mainstream and local level policy making.[50]To a certain degree this was achieved through the work on internet governance, the focus on the policy inputs for witnesses and victim protection (i.e. to include children, whistle-blowers and victims of sexual violence), support to subnational CSO partners in data management, advocacy on agrarian conflict between farmers and plantations, and the formulation of a human rights-based regulation in Sanggau, West Kalimantan. Nonetheless, ELSAM's focus continued to be on national-level advocacy.

One of Hivos' interests has been to facilitate linkages between partner organisations working in different areas of expertise to create awareness and stimulate cross-pollination between development areas. The collaboration between ICT Watch and ELSAM was an example of such an effort. ICT Watch had no prior exposure to human rights organisations while ELSAM had very limited knowledge of internet safety and internet rights. Hivos supported this initiative because of its relevance to the

context for both government and civil society and necessity to have a baseline on internet governance[51].

## 5.5 Explaining factors

### 5.5.1 Internal factors – Organisational Capacity SPO

In 2011 and 2012, Hivos assessed the capacity of ELSAM using the five capacities framework for each of the projects supported. The assessment scored the core capacities of ELSAM, with most areas receiving respectable scores of 7 or 8 (9 being the maximum). The following table presents an overview of the scores:

Table 7

*Hivos' assessment of ELSAM against the 5C framework.*

| Capacity | Description | Scores March 2011 | Scores July 2012 |
|---|---|---|---|
| | 5 Cs | | |
| 1 | The capability to act and commit | Mean score of 7.6 | Mean score of 7.3 |
| 1.1 | The organisation has a clear purpose and acts on decisions collectively. The leadership is accepted by staff, inspiring, action-oriented and reliable. | 8 | 8 |
| 1.2 | The organisation is capable to mobilise sufficient financial resources, and (where relevant) non material resources from members/ supporters. | 7 | 7 |
| 1.3 | The organisation is internally transparent and accountable. (Relations between staff, direction and board; quality of decision-making process | 8 | 7 |
| 2 | The capability to perform | Mean score of 7 | Mean score of 7.25 |
| 2.1 | The number, composition and expertise of staff is adequate in view of the organisation's objectives and programmes. (Indicate when there is high staff turnover) | 7 | 7 |
| 2.2 | The organisation has a coherent and realistic strategic plan. (Context and problem analysis; Theory of Change; quality of formulation of objectives, intended results and indicators; explanation of strategic choices) | 7 | 7 |
| 2.3 | The quality of financial and administrative management is adequate. (Budget, funding plan, financial management, financial report) | 7 | 7 |
| 2.4 | The organisation has an appropriate monitoring and evaluation process (documentation & data collection, involvement of stakeholders, quality of analysis and learning) and uses it for accountability and learning purposes. | 7 | 8 |
| 3 | The capability to relate | Mean score of 7 | Mean score of 7 |
| 3.1 | The organisation maintains relevant institutional relationships with external stakeholders and is seen as credible and legitimate. (Indicate main strategic relationships and collaboration with other actors) | 7 | 7 |
| 3.2 | The organisation is accountable to and communicates effectively with its primary constituents/ beneficiaries. (Describe downward or horizontal accountability process; specify for women) | 7 | 7 |
| 4 | The capability to adapt and self-renew | Mean score of 7.5 | Mean score of 7.5 |
| 4.1 | The organisation (management) responds adequately to trends and changes in the context and uses up-to-date strategies and knowledge. | 8 | 8 |
| 4.2 | The organisation (management) encourages and supports internal learning and reflection processes. (Conditions, incentives) | 7 | 7 |
| 5 | Capability to maintain consistency | Mean score of 7 | Mean score of 7 |
| 5.1 | The organisation is capable to maintain consistency between ambition, vision, strategy and operations. The management is able to deal strategically with external pressure and conflicting demands. | 7 | 7 |
| | Gender | | |
| Quality 1 | To what extent has the organisation formulated objectives with regard to the position of women and issues of gender equality? | 7 | 7 |
| Quality 2 | To what extent does the organisation have internal gender expertise? | 7 | 7 |
| Quality 3 | To what extent does the organisation maintain relations with key GW&D actors in its context, e.g. women's movement, women's organisations, | 6 | 7 |

| | |
|---|---|
| | gender experts? |

Source: Hivos Partner Capacity Assessment Forms March 23, 2011 & July 13, 2012

Overall ELSAM's scores remained unchanged, with a slight decline in the capability to act and commit, a slight increase in the capability to perform, and an increase in its relations with women's groups.

In 2010, ELSAM experienced a change in organizational leadership with the departure of one of its directors. A new director was appointed and younger staff took on coordinator positions. ELSAM has handled this change well, as reflected in its scores.

According to ELSAM's Executive Director and one of board member interviewed, internal factors contributing to the achievement of organizational and program outcomes included effective supervision by the board. Another important factor was the role and participation of ELSAM's members in the research design and advocacy. For example, policy inputs provided to Komnas HAM in October 2013 were developed through a peer review process by the executive director and the board members.

### 5.5.2 Relations Alliance - CFA-SPO

During program implementation and beyond Hivos funded activities, ELSAM benefited from a linkage with other Hivos' partners in terms of getting resource persons, references, facilitators from organisations like Remdec, USC Satunama, Pacivic UI, Yayasan Pena Bulu, Demos, Prakarsa. A number of these were part of the Hivos, EED, and Misereor partner network.

ELSAM has benefitted from Hivos' long-term policy support and appreciated the flexibility afforded by Hivos in the budgetary arrangements allowing the SPO to act in response to unanticipated circumstances and policy demands[52]. Hivos did not demand for their funds to support a specific programmatic area. However, the evaluation team found the result indicators agreed upon in the first project to be rather vague and difficult to measure, making it harder to attribute changes to MFS II funding. Some of the policy deliverables were also rather ambitious and depended a lot on contributing factors for successful achievement.

### 5.5.3 External factors

As illustrated in Chapter 2, Indonesia has a poor reputation for corruption: ranking 114$^{th}$ out of 177 countries in Transparency International's ranking. The level of corruption amongst government officials has come under the spotlight in recent years; as has the weak legislative and institutional framework despite more than a decade of work by the Corruption Eradication Commission. Since the trial of the Democratic Party's Treasurer Muhammad Nazaruddin in 2011, numerous investigations were launched into alleged corruption of senior government officials[53]. These high-profile cases also brought to light the uneven application of laws providing protection to whistle-blowers[54]. Lobby by anti-corruption actors like the Indonesia Corruption Watch (ICW) played a role in increasing the pressure applied on the government and parliament for the need of better laws to protect whistle-blowers.

In addition, the parliament's willingness to amend the LPSK bill is likely to have stemmed partly from their need to demonstrate a commitment to human rights. Giving into some of the pressure coming from human rights groups could well have been a tool for political campaigns or have been driven by the need to maintain the country's image internationally. More concrete results in resolving injustices of the past, through for example revising legislation for a Truth and Reconciliation Commission (TRC)

# 6 Discussion

## 6.1 Design of the interventions

Both of the outcomes identified for ELSAM through this evaluation (i.e. policy influencing and the capacity of network partners to document human rights cases) relate to how civil society organizations support the development of public policy. Given its area of work, ELSAM can be defined as being part of the 'knowledge sector'. In 2009, the Australian Government's Tertiary Education and Knowledge Sector Unit commissioned a review of the Indonesian Knowledge Sector. It is useful to draw from the findings of the report published in 2010.

The report indicates that the Government of Indonesia lacks the structure for obtaining reliable internal policy analysis[56]. Experiences have shown that where CSOs are involved in collecting, analysing and disseminating data and information to government officials, they have been challenged to provide solutions based on the knowledge they produce[57]. The report also states that "development policy makers…have clear yet unfulfilled knowledge needs"[58] and that the knowledge sector would benefit from a focus on supporting government to increase and assess its performance[59]. Given this context, the design of ELSAM's interventions has been suitable to the prevailing conditions. Not only has ELSAM been producing information and data on human rights abuses, it has succeeded in working with the government to seek policy solutions by providing its expertise in producing legislative inputs.

Since the report was published, the Australian Government has funded the establishment of the Knowledge Sector Initiative (KSI) in 2013, which now also supports ELSAM. KSI has produced so called 'stories of change' on successful interventions of its partners. From an analysis of the report it can be concluded that these were: 1) being able to collect research evidence to inform policy makers; 2) the existence of a need for data and information within the government; 3) organizational reputation; 4) engagement with the parliament; 5) collaboration with network organizations; 6) media engagement, and 7) an understanding of the context.[60]

By comparing these elements to ELSAM's role in amending the Law on Victim and Witness Protection and its broader but related work to document human rights violations, we can infer that many of the same success factors were present in the SPO's design. First, ELSAM's database contains records covering a 14-year period (from 2000 until the present), with continuous monthly updates. Second, LPSK itself recognized that the 2006 law limited its mandate and constricted its actions. Led by a person with links with ELSAM and CSOs, there was better grounds for collaboration. ELSAM had built up a good reputation for its role in policy work and rights monitoring, and unlike other organisations they were less confrontational in their approach. An organizational network with other CSOs was well-established through KPSK. Although there was less direct media engagement, ELSAM used its website to disseminate and publicize papers.

Another paper produced by the Overseas Development Institute on the political economy and policy making in Indonesia, confirms that NGOs in Indonesia can bring about policy change through "energetic activism" and links to policy makers[61]. ELSAM has successfully positioned and designed its interventions as a source of knowledge external to the government, and as organization willing to provide assistance and input to improve policy frameworks that are conducive for human rights.

# 7 Conclusion

The two most important changes that took place in the civil society arena were the influence on the amendment of the law pertaining to victim and witness protection, and more systematized data collection and management on human rights violations by ELSAM and its network. These outcomes were selected for in-depth process-tracing. ELSAM was better positioned to utilize its expertise, rich data and policy analysis to work with other CSOs in developing policy inputs. ELSAM's role in this evidence-based advocacy system on human rights violations was to provide a platform for data collection and managing a national database system.

With a new law passed by parliament in October 2014, the coverage of LPSK services will expand to children, victims of domestic violence, and whistle-blowers. This result comes after more than four years of lobby and engagement by a host of organisations. ELSAM was well positioned amongst civil society networks and had personal networks with LPSK. Its less confrontational style of lobby was well suited to the context.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because the two outcomes serve both the grassroots and policy needs. Regarding the context in which ELSAM is operating, its interventions and outcomes achieved are relevant because through the new law, LPSK now has the ability to increase their coverage of protection services provided. At the network level, CSO monitoring of human rights violations at the sub-national level could feed into an advocacy agenda or be linked to LPSK services. Lastly, ELSAM's interventions and outcomes are relevant to Hivos' strategies because ELSAM has adopted an alternative, more moderate lobby approach as opposed to more common 'radical' strategies often taken on by human rights activists in Indonesia.

A number of external and contributing factors explain the changes in the civil society dimensions. First, ELSAM did not work alone, but conducted advocacy activities through KPSK. ELSAM's role in this coalition was to provide regulatory reviews and assist in drafting of the bill. Other civil society groups, particularly those working on anti-corruption issues also emerged as a pressure factor.

Within LPSK, there was a realization that its protections services were less than optimal. The parliament, showing initial support for the revision of the 2006 law in 2010, had delayed discussions on the bill. In 2014, with national elections approaching, the parliament was more included to respond to civil society and media pressure as a means to gain public sympathy. To some extent, the Law on Witness and Victim Protection was a trade-off with other more sensitive laws being advocated by human rights groups.

Another explaining factor has to do with the regulatory and political context of Indonesia and the strategy ELSAM has chosen to adopt. Unlike other human rights organisations, who address regulatory gaps by building public pressure, ELSAM has chosen policy advocacy as its main strategy. Its credibility as an organization and its knowledge of the policy environment, allowed ELSAM to foster constructive engagement so that political reforms could materialize.

Table 8
*Summary of findings.*

| When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements? | Score |
|---|---|
| The CS interventions were well designed | 8 |
| The CS interventions were implemented as designed | 7 |
| The CS interventions reached their objectives | 7 |
| The observed outcomes are attributable to the CS interventions | 7 |
| The observed CS outcomes are relevant to the beneficiaries of the SPO | 8 |

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

# Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration
- 1 = A slight deterioration
  0 = no change occurred, the situation is the same as in 2012
+1 = slight improvement
+2 = considerable improvement

| Dimension | | Indicators | Question | Changes |
|---|---|---|---|---|
| Civic engagement | 1 | Needs of marginalised groups | How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies? | 0 |
| | 2 | Involvement of target groups | What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities? | 0 |
| | 3 | Political engagement | How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups? | + 1 |
| | | | | |
| Level of organisation | 5 | Relations with other organisations | In the past 12 months what has been the most intensive interaction you had with other CSOs? | + 1 |
| | 5 | Frequency of dialogue with closest CSO | In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with? | + 1 |
| | 6 | Defending the interests of marginalised groups | Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs? | 0 |
| | 7 | Composition current financial resource base | How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking? | + 2 |
| | | | | |
| Practice of Values | 8 | Downward accountability | To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them? | +1 |
| | 9 | Composition of social organs | What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for? | 0 |
| | 10 | External financial auditing | How regularly is your organisation audited externally? | 0 |
| | | | | |
| Perception of impact | 11 | Client satisfaction | What are the most important concerns of your target groups? How do your services take into account those important concerns? | +1 |
| | 12 | Civil society impact | In the past 12 months, what impact did you have on building a strong civil society? | - 1 |
| | 13 | Relation with public sector organisations. | In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives? | 0 |
| | 14 | Relation with private sector organisations | In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective? | - 1 |
| | 15 | Influence upon public policies, rules, regulations | How successful have you been in influencing public policies and practices in the past 2 years? | + 1 |

| | | | | |
|---|---|---|---|---|
| | 16 | Influence upon private sector agencies' policies, rules, regulations. | How successful have you been in influencing private sector policies and practices in the past 2 years? | + 1 |
| | | | | |
| **CS context** | 17 | Coping strategies | In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society. | +1 |

# Appendix 2 Changes in civil society indicators between 2012 and 2014

## 1. Civic Engagement

### 1.1. Needs of marginalised groups SPO

ELSAM addresses the needs of human rights victims through direct and indirect services. ELSAM directly engages with the victims of human rights violations by supporting them to organise themselves into a victims' organisations, providing referral services to government service providers such as Komnas HAM and LPSK, and providing financial support through cooperatives. Indirect services to the victims are in the forms of policy advocacy work, including research and CSO coalitions on specific issues such as witness and victims protection (KPSK).

With regards to direct services provided to human rights victims, there are no significant changes. ELSAM continued to work with the same networks and organisations throughout the 2012 to 2014 period and coverage remained rather limited. For example, ELSAM worked with Solidaritas Indonesia to ensure a medical and psycho-social referral system is in place. Annually, this benefits around seven to 10 victims. Other direct services ELSAM supported have a wider coverage, such as the cooperative 'Gemah Ripah' for victims of human rights abuses established by ELSAM in collaboration with the Association of Families of Missing Persons (IKOHI) and Working Group on the Disclosure of Truth (*Koalisi Keadilan dan Pengungkapan Kebenaran*/KKPK) in 2012. From original seed money amounting to Euro 350 provided to the cooperative, the number of active members grew from 30 in 2012 to 45 in 2013. This further expanded to overage of 80 victims after ELSAM facilitated linkages between the cooperative and a Ministry of Social Affairs' grant program (KUBE).

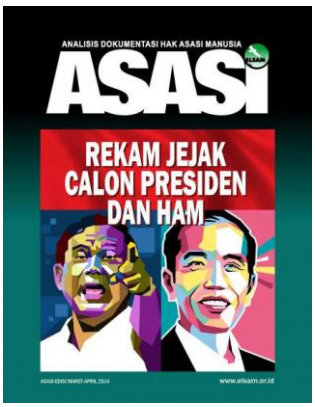
On indirect services, namely assisting CSOs and other human rights groups with human rights research and policy advocacy, LPSK[62] and ELSAM succeeded in translating demands from victims for increased coverage of the services[63] into a new draft policy that encompassed a broader recognition of human rights violations that in consequence led to an increase in services delivered to those entitled. ELSAM provided policy inputs to Komnas HAM[64] and these inputs were adopted into a regulation and as a result, Komnas HAM has managed to endorse the support for 750 victims in early 2013, of which 409 were addressed by LPSK[65]. In 2014, LPSK is reaching the threshold of 1,000 victims to be serviced[66]. Whilst ELSAM's advocacy for policy change focused on human rights victims, the results booked have also benefited witnesses of crimes and abuses.

[62] For example LPSK organized a focus group discussion with the stakeholder on 30 may 2012 to identify the regulatory issues and in September 2014, finally LPSK issued a new regulation on standard operating procedures to manage victims' case management.

[63] Compilation of media coverage from showing strong demand by the victims (complains, expectations, etc) to the LPSK. See http://perlindungansaksi.files.wordpress.com/2009/02/liputan-100-hari-lpsk.doc and http://www.elsam.or.id/article.php?act=content&id=2954&cid=15&lang=in#.VFw1efmUeSo

[64] On 4 October 2013, ELSAM submitted a policy input to Komnas HAM on dealing with the victims of human rights violations. See "MASUKAN ELSAM TERHADAP RANCANGAN PERATURAN KOMNAS HAM TENTANG STANDAR OPERASIONAL PROSEDUR/MEKANISME PEMBERIAN SURAT KETERANGAN KORBAN DAN/ATAU KELUARGA KORBAN PELANGGARAN HAM YANG BERAT".

[65] Aris Setiawan, "LPSK Bantu Rehabilitasi 409 Korban Pelanggaran HAM", *VIVAnews*, 9 May 2013. Available from http://nasional.news.viva.co.id/news/read/411536-lpsk-bantu-rehabilitasi-409-korban-pelanggaran-ham (accessed 13 December 2014)



[66] Lembaga Perlindungan Saksi dan Korban, Informasi LPSK, "Jumlah Permohonan Perlindungan LPSK", 18 June 2014. Available from http://www.lpsk.go.id/publikasi/informasi_detail/2100 (accessed 13 December 2014)

### 1.2. Involvement of target groups SPO

In the baseline assessment, ELSAM had the highest score (3) for this indicator since there was evidence of a high level of involvement of target groups (government, CSOs, and the marginalized people) in their program planning and implementation. For example, in developing policy inputs and papers, target groups are asked to provide feedback and are involved in instances where a parliamentary audience is required. There is no significant change in from the baseline. During the end line, ELSAM management and staff reported that they continued to involve target groups in each stage of the project cycle. In developing policy briefs/inputs for Komnas HAM, ELSAM began with an analysis of human rights violation case reports and held discussions with survivors, continuously engaging them in advocacy activities like public hearings. Victims and survivors are an indispensable resource as their testimonies and experiences carry much weight and are important inputs in developing position papers and policy drafts. ELSAM continued its strategic involvement in the KKPK by maintaining a database on past human rights abuses[67] and leading the policy/regulatory review. This has sharpened the focus of action of the coalition to promote truth-revealing as a modality in peacefully settling the past[68].

Although in their daily activities, the involvement of target groups is intensive, target group involvement in ELSAM's organisational organ is limited due to the nature of ELSAM's business entity as a "perkumpulan" or association that, by law, does not provide a formal position for the victims in the organisational structure, such as board of trustees or executive body. This is understandable because ELSAM is not a membership organisation. The involvement of target groups in the overall organisational process is considered as an ethical operational standard rather than organisational inclusion.

### 1.3. Intensity of political engagement SPO

ELSAM by design is a political organisation. Since its creation it has called for the rights human rights victims to be protected, whether through compensation, regulatory frameworks or psychosocial services. They engage in highly politically sensitive issues, such as calling for a Truth and Reconciliation Commission Law, which is still under review by the Constitutional Court. Their core business is to influence policies and legislative bodies. ELSAM is however not affiliated to any political party and keeps it impartiality.

In 2014, ELSAM has stepped up its engagement and messaging at the national level because of the 2014 presidential elections. It released several press releases and disseminated information regarding candidates and their history and experience with human rights. The newly elected president has been urged to select an Attorney General without a record on corruption and human rights violations[69]. This attention to the elections is not associated with the Hivos-supported program, which ended in January 2014.

## 2. Level of Organisation

### 2.1. Relations with other organisations SPO

With regards to ELSAM's relations and networks with other organisations involved in advocacy for human rights victims, there was a slight expansion or change during the 2012-2014 period. ELSAM worked with its longstanding network that includes organisations like KKPK, IKOHI, Solidaritas

[67] See for example "Perkembangan Penyelesaian Pelanggaran HAM Masa Lalu ELSAM/Direktorat PSDHAM/Desember 2012" published by Elsam, can assessed at http://www.elsam.or.id/list.php?cat=stat_pengadilan_ham&lang=in
[68] Hester Smidt, "ELSAM Input-Output Analysis", MFS-II evaluation 2014, p. 3
[69] See ELSAM's press release dated 2 November 2014

Indonesia/SI, Pakorba Solo, etc. However, through ELSAM's active participation in KPSK on advocacy for the revision of law on LPSK, there was an increase in the frequency of meetings and collaborative work with KPSK members. In addition to that, on advocacy for freedom of expression through internet governance, ELSAM has widened its network to cooperate with organisations like ICT Watch. ELSAM was involved in setting up a national forum on the issue, which is now engaging with Ministries that work on ICT and internet.

It is worth noting that since 2013, ELSAM has started to collaborate with the Australian government-funded Knowledge Sector Initiative. This has widened ELSAM's network with Indonesian research organisations working on a broad range of issues, but this new network cannot be attributed to the Dutch-funded program.

## 2.2. Frequency of dialogue with closest civil society organisation SPO

In 2014, ELSAM has conducted more collaboration and cooperation with close CSOs compared to 2012. This is because of their involvement in: 1) KKPK (advocacy to revise the law on LPSK), 2) Public Interest Lawyers Network (PILNET) for judicial review on the Law No 18/2004 on Plantation, and 3) with ICT Rights Watch on internet governance. ELSAM's collaboration with the KKPK has become effective and efficient over the years as ELSAM has a niche role to play. ELSAM's monitoring of cases in freedom of expression through social media/internet has put ELSAM in an intensive dialogue and collaborative with other CSOs. For example, , together with the Institute for Criminal Justice Reform (ICJR), *Lembaga Bantuan Hukum Pers* (LBH Pers), and *Perkumpulan Mitra* TIK Indonesia (ICT Watch), ELSAM brought the Ministerial Regulation No. 19/2014 on Internet Governance to the Constitutional Court[70].

## 2.3. Defending the interests of marginalised groups SPO

As described under Indicator 1.1 on needs of marginalised groups, ELSAM has managed to influence LPSK's internal regulation on eligibility for protection that resulted in an increase in coverage of LPSK as well as expanding the scope of services not only to direct victims but also to the affected family members through the revision of the new law on LPSK (Law No. 31/2014). In this regard, ELSAM managed to defend more (quantitatively and qualitatively) interests of the victims of human rights violations. Most of the victims served are victims of 1965 human rights abuses, and religious or market fundamentalism. ELSAM's ability to influence national level policies may very well have a wider impact on the human rights situation in Indonesia, but this is difficult to measure.

## 2.4. Composition financial resource base SPO

Prior to 2011, ELSAM relied heavily on three donors: Misereor, Hivos and EED with total funding Eur 890,000, as evident from their 2010 audited financial report. In 2013, ELSAM managed to secure long-term core funding[71] from the Knowledge Sector Initiative (KSI) funded by the Australian Government for at least five years with possibility to of another three-year extension. Support from this non-European donor is a positive indication that ELSAM is able to diverse its funding sources.

[70] See ELSAM's press release on this issue at http://www.elsam.or.id/article.php?act=content&id=3134&cid=302&lang=in#.VIPF-fmUeSo

[71] Core funding is a term used by Australia's Department for Foreign Affairs and Trade (DFAT) to distinguish it with regular grants to NGOs that are driven by donor program objectives. Core funding is given to support the NGO to achieve their mandates, not to help the donor to achieve donor's program objectives.

# 3. Practice of Values

## 3.1 Downward accountability SPO

From a programmatic perspective, and due the influx of social media communication, the public and victims of human rights violations are generally more informed of ELSAM's activities. ELSAM has continued the practice of producing public information materials such as the Bulletin ASASI and Journal Dignitas, as well as sending out email newsletters. Other information, such as ELSAM's Reports to Public are available online. Information on financial reports/performance, however is not available on their website.

## 3.2 Composition of social organs SPO

There was no change in the composition of the Board since 2012. Female representation in the board remains the same with the situation in 2012 (two out of five board of trustee members). ELSAM's executive body is led by a female director and she will end her second term in 2015. Human rights victims are not represented in the Board, because ELSAM is not a membership-based organisation.

## 3.3. External financial auditing SPO

During the baseline, the audited financial report of ELSAM was not available, but in 2013 they published their 2011 and 2012 audited financial reports. ELSAM has conducted external financial audits for the fiscal year of 2013, but up to November 2014, the report has not been completed and they will combine it with audit for fiscal year 2014. It is understandable from an efficiency point of view where the external audit is conducted for two fiscal years, but from a management control perspective, it is not a good practice.

# 4. Perception of Impact

## 4.1. Client satisfaction SPO

ELSAM does not have a monitoring and evaluation system in place that extends to the services they provide to victims of human rights abuses. Their main attention is on recording past cases of abuse, rather than tracking satisfaction of their target groups regularly. ELSAM has set up a website and Twitter account where people can give feedback or complain and the analysis of this media do detect dissatisfaction on ELSAM's performance. At an individual level, there is evidence available of two beneficiaries (victims of human rights violations) whom ELSAM assisted in receiving LPSK assistance. They reported high satisfaction with what ELSAM has done for them.

At the organizational level, KontraS and Komnas HAM expressed their appreciation for continued support and leadership of ELSAM in the coalition. For Komnas HAM and KontraS, we can conclude that their level of satisfaction remains the same as during the baseline.

## 4.2. Civil society impact SPO

During the baseline, ELSAM saw its contributions to civil society as being through their provision of data (research) and training of human rights activists. These roles seem to have abated since they were very much project-based and when the project ended, the activities did not continue. Currently, ELSAM aims to transform itself into a Centre for Human Rights involved policy-making as part of a broader attempt at strengthening civil society and promoting the protection of human rights. So the impact on the civil society arena that ELSAM is trying to bring about is building evidence-based policy advocacy through providing more evidence to the policy-making process initiated by CSOs. Although the role of ELSAM in the revision of the law on LPSK was significant, ELSAM reported that there have been no increased number of research publications (or working papers) published by ELSAM during 2012-2014 period. In 2013, ELSAM produced 5 working papers (3 of which were on the issue of

internet governance), and one in 2014 (also on internet governance)[72]. It seems that the number and type of working papers produced is related to the kind of donor support ELSAM obtains.

## 4.3. Relation with public sector organisations SPO

As an organisation whose core business is policy advocacy, ELSAM's main counterpart and target group is the government. In the 2012-2014 period, ELSAM has continued their intensive relationship with government agencies such as with Komnas HAM and LPSK on the protection services for the victims of human rights violations, and with the Ministry of Law and Human Rights on the revision of Law on LPSK. In this regard, ELSAM's relation with government agencies remains intensive, unchanged since 2012, illustrated by press releases from ELSAM and media clippings[73]. The government has acknowledged ELSAM's role, reflected in the participation of ELSAM in joint government and non-government fact-finding missions in response to violent land disputes between plantations and companies in Lampung. In terms of service delivery, during the baseline, ELSAM reported that it supported public sector officials through a series of trainings for local law enforcers (police, public prosecutors and judges at the lower, higher and supreme courts) to instil human rights standards. In the last two years, these trainings were discontinued due to a change in program strategy that now focuses on policy advocacy.

## 4.4. Relation with private sector agencies SPO

ELSAM employs two strategies to influence private sector policies and practices: one is confronting and the other engaging. Through the latter more voluntary/persuasive model, ELSAM has been promoting a manual/guidance on how to do human-rights friendly business. This represents a shift in strategy since the baseline in terms of how it is dealing with private sector agencies.

As a research and advocacy organisation, ELSAM has produced more papers and publications on the relation between business and human rights. In 2012, there were 5 publications and advocacy papers produced by ELSAM, which doubled in 2014 when they published 10 joint research papers on business and human rights[74].

## 4.5. Influence upon public policies, rules, regulations SPO

ELSAM's has contributed to the improved governance of Komnas HAM and LPSK in handling the victims of human rights violations (Regulation No. 004/Komnas HAM/X/2013). As a result an agreement was reached on June 25, 2014 cumulating in the signing of a MoU between Komnas HAM and LPSK on better coordination, governance and procedures for handling victims. In another case, ELSAM successfully advocated a case regarding the handling of plantation disputes and a civil law suit against the Ministry of Environment's issuance of a permit to PT. Newmont (a mining company active in Nusa Tenggara Barat) to dispose waste into the sea. ELSAM supported the public lawsuit against PT. Newmont in 2012. Unfortunately PT. Newmont won the case and the civil suit against the company has continued until the present.

## 4.6. Influence upon private sector agencies' policies, rules, regulations SPO

During 2012-2014 period, ELSAM has supported a series of investigations of conflict between smallholders/farmers and plantation corporations occurring in Medan, Ketapang in West Kalimantan, Kebumen, Jambi and Blitar. The results have then been published and used to call for policy changes, official investigations, and/or reparation for victims. Some of these reports have been submitted to the National Commission on Human Rights (Komnas HAM), the Indonesian national police, and LPSK. In response to the submission, Komnas HAM carried out an investigation of police officers suspected of committing human rights violations and found that company practices to pay police to ensure the

security of their staff is illegal. In one case, a company in South Kalimantan changed its security policy in 2012 as a result. However, since the baseline, there have been no additional cases similar to this.

# 5. Civil society context

## 5.1. Coping strategies

As an organisation defending human rights, ELSAM needs to stay relevant to the needs of the public, especially to their constituents' needs. As such, besides conducing advocacy research, ELSAM has continued to monitor the human rights situation periodically. On the basis of this monitoring, ELSAM regularly analyses findings and report the results to the public as a strategy to keep their advocacy agenda relevant and contextual. The work of ELSAM has remained relevant in the last two years since violence, both by the state and radical groups have increased due to what is referred to as "ignorant policy" set forth by the administration. During his term, former President Yudhoyono was criticized for not being able to uphold human rights enshrined in the 1945 Constitution and in the 2005-ratified International Covenant on Civil and Political Rights (ICCPR). ELSAM, jointly with other members of Indonesia's NGO Coalition for International Human Rights Advocacy submitted several reports to the Human Right Committee on concerns relating to the implementation of ICCPR. In 2013, the report highlighted a number of issues include incidents of violence against religious minorities and inability of the government to protect citizens from conducting religious activities[75]. As reported by KontraS in their 2014 annual report, the human rights situation in the last 10 years has been getting better in terms of number of human rights policies[76] and rhetoric of the government, however, at implementation level, protection and services provided by the government have worsened. In this context, ELSAM may be successful in influencing policy (since the government is relatively supportive to issuance of policies such as the revision of Law on LPSK), but the problem is in the implementation of such regulations. In this regard, ELSAM's approach and strategy may need to be expanded further to cope with a government that says the right things, but is unable to follow up its rhetoric with concrete action. Compared with the situation in 2012, ELSAM's focus continues to be on influencing policy formulation, and thus there has been no change in the extent to which the SPO has had a role in policy implementation. The monitoring of policy implementation is very much needed, and if ELSAM's strategy does not change (i.e. continued focus on policy formulation and positive engagement with the government), the relevance of their work may decrease in the next five years as a new administration takes over. The work that ELSAM has done with coalitions like the International Human Rights Advocacy is more appropriate, but this may need to focus more on applying direct pressure nationally.

Report CDI-15-039

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Klaver, D.C., Prasetyo, K., Smidt, H., February 2015, *FIELD end line report; MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and SurveyMETER. Report CDI-15-067. Wageningen.

This report describes the findings of the end line assessment of FIELD that is a partner of Hivos.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses FIELD's contribution towards strengthening Civil Society in Indonesia and it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which FIELD contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain FIELD's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

# 1 Introduction

This report presents the civil society end line findings of FIELD in Indonesia which is a partner of Hivos in Indonesia under the Dutch Consortium People Unlimited 4.1. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study, FIELD is working on MDG7ab.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch CFAs and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

*Changes in the civil society arena of the SPO*
In the 2012 – 2014 period the two most important changes that took place in the civil society arena of the SPO are related to Level of Organisation and Perception of Impact.

With regards to the 'level of organisation', the evaluation team observes that FIELD strengthened its relations with a number of coalitions to provide more protection for farmers under regulatory frameworks by proposing amendments of laws. At the grassroots level, farmer groups and cooperatives strengthened their organisational, financial and cultivation capacities. In consequence farmers have become less dependent upon seed companies for input supplies and upon middlemen for loans. However, farmers still remain dependent upon these middlemen to market their produce. FIELD took part in international and regional networks to lobby against World Trade Organization (WTO) policies. FIELD took advantage of the WTO meeting held in Bali in December 2013, to collaborate with other global CS actors to voice their protest against trade agreements.

With regards to 'perception of impact', a major success is the amendment of Law N0.12/1992 in 2013, which decreased farmers' dependency on seed companies who sell hybrid seedlings and gave farmers back their right to breed their own seeds.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with the SPO, and interviews with external resources persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

*Contribution analysis*
Based upon an analysis of the projects and programmes financed by the Dutch NGOs, four orientations strategic for civil society development were identified: Ensuring that more people from more diverse background are engaging in civil society activities; ensuring that the organisations that receive support from the SPO are capable of playing their role in civil society – intermediate organisations; strengthening the relations with other organisations in civil society to undertake joint activities, and; influencing policies and practices of public or private sector organisations. For Indonesia the focus was on the capacity of intermediate organisations to play their role in civil society and on policy influencing.

Based upon an estimation of the percentage of the total MFS II budget related to interventions that are relevant for civil society, those SPOs whose absolute budgets for civil society were most important were selected for in-depth process tracing on two outcomes related to the above mentioned strategic orientations. FIELD was amongst those SPOs selected for a quick process tracing.

The first outcome that we looked at was the strengthened capacity of farmers through the development of cooperatives. FIELD has facilitated the establishment of 6 new cooperatives and increased their asset base, from around IDR 13 million per cooperative in 2011 to more than IDR 60 million in 2014. One of the cooperatives visited by the evaluation team even had assets worth IDR 300 million. The pathway that most likely explains this outcome is FIELD's intervention to strengthen the capacity of farmer credit unions through providing trainings and technical assistance on cooperative governance and networking.

The second outcome that we looked at is farmers are better positioned to have the freedom to plant different crop strains through the revision of national legalisation. Farmers were dependent to the seeds produced by large seed companies and were at risk of criminalization if they wanted to develop their own strains. FIELD together with a coalition of NGOs lobbied to secure the judicial review of Law No. 12/1992 on Plant Cultivation System. The pathway that most likely explains this outcome is that FIELD, together with the coalition, developed policy inputs and mobilized farmers' to provide evidence and testimonies that have resulted in a ruling in their favour.

*Relevance*
Interviews with staff of FIELD, with external resource person, with the liaison officer of Hivos, as well as contextual information helped to assess the relevance of FIELD's interventions in terms of; its Theory of Change (ToC) for Civil Society (CS) as designed during the baseline study; the context in which FIELD is operating; the CS policies of Hivos.

With regards to the baseline ToC, the outcomes achieved are relevant because both outcomes represent the preconditions of the ToC, namely creating an enabling policy environment for farmers and organising farmers so that they have access to, and control of resources. Both are critical elements to attain FIELD's ultimate goal of independent and sovereign farmers.

With regards to the context in which FIELD is operating, its outcomes achieved are relevant because they are helping farmers come to terms with the long-term impacts of the Green Revolution. Through FIELD's support farmers are regaining independence from commercial seeds that require intensive agricultural inputs and are retaining their traditional knowledge.

With regards to the CS policies of Hivos, FIELD's outcomes are relevant to the Green Entrepreneurship programme. Through this programme, the CFA has supported smallholder participation in markets that are driven by sustainable economic and environmental principles.

*Explaining factors*
The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within FIELD, the external context in which it operates and the relations between FIELD and Hivos.

Internal factors within the SPO that explain the outcomes are FIELD's application of the Farmers' Field School (FFS), which has contributed to greater farmer confidence and is a key factor to the achievement of both outcomes. Through the FFS networks, FIELD has been able to mobilize the farmers both for technical assistance and the advocacy work.

External factors that explain the findings are the existing enabling environment for cooperative development and support from other CSOs that made lobbying as a coalition possible. The government considers cooperative development to be one of the key pillars of economic growth, contributing to favourable conditions for cooperative development. With regards to policy advocacy, the CSO coalition, which consists of longstanding NGOs that work on food and farmers issues, was an important factor that contributed to the revision of the Cultivation Law.

Factors that explain the findings that are related to the relation between the FIELD and Hivos are the linkages that Hivos has facilitated between FIELD and other organisations and its long-term support to FIELD and other organisations in its network. The Hivos-supported project benefitted from already existing linkages with farmers' groups in Indramayu and FIELD's experience in the areas of participatory plant breeding and FFS, which had been developed through preceding donor-support.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the MDG/theme FIELD is working on. Chapter three provides background information on FIELD, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Hivos. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in Appendix 2 of the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in Chapter 4. The answers to each of the evaluation questions are being presented in Chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in Chapter 6. Conclusions are presented in Chapter 7.

# 2 Context

## 2.1 Political context

### 2.1.1 Brief historical perspective

Indonesia's rise to being the world's third largest democratic nation has been lauded by many world leaders. The county is often considered to be a model Muslim democracy. As the fourth most populous nation with an estimated 250 million people[1], Indonesia has sustained its democratic commitment since transitioning from an authoritarian leadership to a democracy in 1998. The decentralized administration now consists of 34 provinces and 508 districts and municipalities.

Prior to 1998, Indonesia was under strict authoritarian regime. Suharto, known for his so-called New Order (1966-1998) regime, ushered in radical transformations that would place social and political forces under direct state supervision. The defining characteristics of the Suharto era were a focus on economic growth and controlled consensus and political stability devoid of dissent. A series of tumultuous economic and political transitions in the nineties severely diminished the credibility of ageing President Suharto, who was forced to resign amidst mass street protests.

His departure in 1998 laid bare three decades of social inequalities, state-perpetuated abuses against human rights, and a lack of civilian liberties. The regime change opened the way for a period of *Reformasi* started under the presidency of B. J. Habibie (1998-1999) and continued by Abdurrahman Wahid (1999–2001), Megawati Soekarnoputri (2001–2004), and Susilo Bambang Yudhoyono (2004–2014). Restrictions on citizen participation, press freedom and association were removed. Democratic reforms and decentralization led to direct elections, portioned authority, devolution of authority to regional authorities, formation of new political parties and ended the military's parliamentary influence. The distinct historical periods of the New Order Regime and *Reformasi* (1998-present) have shaped the emergence of civil society. Defining characteristics are summarized in the table below.

Table 1
*Characteristics that have defined the emergence of civil society in Indonesia*

| Characteristics | New Order, authoritarian period (1966 – 1998) | Reformasi (1998 – present) |
|---|---|---|
| **Political system** | Centralized, authoritarian characterized by unipolarity. Golkar as the dominant political party.<br><br>In 1999, there were 27 provinces, 306 districts and around 60,000 villages. | Decentralized, democratic. Fragmentation of power and atomization of patronage relationships. Emergence of numerous political parties. Direct presidential elections since 1999.<br><br>Decentralization altered the political and administrative landscape: 34 provinces, 410 districts, 98 municipalities, 6,944 sub-districts and 81,253 villages.[2] |
| **State-citizen interaction** | Benevolent leader, obedient population. Down to the village level, the state permeated society. | Modern political culture marked by diminishing hierarchy between the state and citizens, allowing for citizens to interact more freely. |
| **Citizen representation and** | Strict control of speech, expression and association. | Burgeoning of CSOs, pressure groups and NGOs following the political euphoria after Suharto's |

[1] In 2010 the population was estimated to be around 237 million people (BPS 2010 Population Census). The current figure is an estimate from BKKBN and similar figures are cited in the CIA's World Fact Book and the World Bank.

2 Latest data (2014) See: Rumah Pemilu, "Gambaran Singkat Pemilihan Umum 2014 di Indonesia", 3 July 2014. Available from http://www.rumahpemilu.org/in/read/3351/Gambaran-Singkat-Pemilihan-Umum-2014-di-Indonesia (accessed 25 October 2014)

| | | |
|---|---|---|
| **voice** | CSOs and their networks largely "hiding behind the screen", and operating under state surveillance. A period of growth occurred in 1995-98, as resistance was building. | fall.<br><br>Indonesian CSOs began to establish new networks internationally. Up until the early 2000s the focus was on state-centrist issues. Later, issues that CSOs were tackling became more diverse, ranging from pluralism, poverty reduction to fulfilment of economic, social and cultural rights. |
| **Media** | No free press, censorship and state-control. Suharto had firm grasp over how to use print & broadcast medias to promote political ideologies. | More vibrant media environment, flourishing of media businesses albeit in control of 12 main conglomerates that are mostly profit-driven and often have political ties. |
| | Limited public and CS use and access to internet until mid-90s. | Twitter nation, widespread social media use. |
| | | Growing realization of the importance of media/free press as the fourth pillar of democracy. |
| **Artistic forms of expression** | Art and literary censorship conducted by the state. Art forms were a means to reinforce political order. | Greater freedom of the arts and cultural sectors. Organizations able to hold art events more freely. Freedom of expression a catchphrase amongst individuals and artistic groups, but challenged by more conservative members of society. |
| **Religious expression and organization** | Regime repressed religious groups, especially radical forms. | Emergence of religious groups seeking to restore Islamic values and defend Muslim values. |

With political reforms came greater freedom and space for civic engagement. In the *Reformasi* period, there was a remarkable increase in the number of civil society organizations, many of which were Islamic in character. In 2000, the Central Agency on Statistics (BPS) recorded around 70,000 registered organizations, compared to just 10,000 in 1996.[3]New groups sprung up with donors encouraging activists to establish NGOs they could fund. These organizations were eager to distance themselves from state and often took an anti-government stance. Proliferating CSOs and NGOs have taken advantage of decentralization and greater regional autonomy to engage in public affairs. Civil society and government relations have improved, although both sides remain sceptical of the others' intentions.

### 2.1.2 Recent trends in the political context

Indonesia is considered to be a story of democratic success, but it still struggles to realize the benefits of sustained and equitable economic growth. In the political context, the main challenges lie in governing such geographically vast and decentralized country, applying principles of good governance and the enormous task of reforming the country's bureaucracy.

Although, Indonesia's 'big bang' decentralization initiated at the turn of the century narrowed the gap between local government and citizens, it has also localized political power struggles. While the devolution of authorities relieved tensions between the central government and the regions, it has also created opportunities for corrupt and rent-seeking practices, at the local level. As indicated by Transparency International's corruption index scores, perceived corruption in Indonesia remains high.

| 2012 | 32 | 118/174 |
| 2013 | 32 | 114/177 |

Source: Transparency International

In 2013, decentralization was taken a step further with the approval of the Village Law, intended to address weak governance arrangements and empower rural communities to participate politically. The new law could also lead to village elites distorting power relations and misusing government funding if not properly monitored.

Indonesia is still transitioning politically and many challenges lie ahead. According to the 2012 Indonesia Governance Index's Executive Report, "Indonesia is witnessing a paradox in its democracy. On one hand, a successful opening-up of civil liberty has led to the avalanche of democratic demands across the nation, however on the other hand, democratic institutions' are inadequately respond to those demands." Nonetheless, the Indonesian Governance Index, which focuses on measuring provincial governance, does show a general improvement in the performance of the government (political office) bureaucracy, civil society and economic society based on principles of participation, transparency, fairness, accountability, efficiency, and effectiveness between 2008 and 2012. Civil society scores improved the most significantly, while scores for bureaucracy rose slightly.[4]

Table 3

*Indonesia Governance Index: Average provincial scores*

| Arena | 2008 | 2012 |
|---|---|---|
| Government | 4.93 | 5.46 |
| Bureaucracy | 5.53 | 5.58 |
| Civil Society | 4.85 | 6.33 |
| Economic Society | 4.77 | 5.71 |

In the past decade, Indonesians have generally enjoyed a freedom to participate in the political process through a direct-election mechanism. However, in September 2014 lawmakers voted in favour of a bill reviving indirect elections of regional heads. The controversial vote provoked public outcry which saw peaceful protests and the public voicing their discontent through social media. In early October, just before the end of his term, president Yudhoyono issued a regulation in lieu of the law, effectively repealing the law until further judicial review.

The recent 2014 elections which marked the end of Yudhoyono's 10-year term, demonstrated that Indonesian voters are increasingly voting for popular figures irrespective of political party alliances. While practices of corruption, vote-buying and poor voter administration remained in the recent election, the public seems to have matured politically, indicated by the enormous interest in televised debates between the leading candidates. The appeal of the newly sworn in President JokoWidodo, popularly known as Jokowi, has come from his hands-on, man-of-the-people approach. As Jokowi begins his five-year term he will need to start addressing a myriad of challenges that include corruption, stagnant economic growth, and human rights concerns, particularly with respect to the rights to freedom of expression, peaceful assembly, and religious intolerance. If left unaddressed, these challenges could seriously undermine Indonesia's stability and democratic reforms.

[4] The IGI uses a scale of 1 (lowest) to 10 (highest). Data is available online through their website. Indonesia Governance Index, Data, "IGI Executive Report". Available from http://www.kemitraan.or.id/igi/index.php/data/publication/factsheet/275-igi-executive-report (accessed 25 October 2014)

## 2.2 Civil Society context

### 2.2.1 Socio-political context

Today, there are tens of thousands of civil organisations in the country5, comprising of religious organisations, unions, mass-based membership organisations, ethnic groups, professional associations, politically affiliated organisations, NGOs, and other community organisations.6 CSOs in Indonesia work on wide range of themes. Thematic areas recently prominent include democratization and human rights; issue-based campaigns; protecting economic, social and cultural rights; promoting community access to basic services; environmental and natural resources management, and; climate change and disaster risk reduction. In 2012, the Ministry of Home Affairs documented more than 65,000 organizations, of which around 9,000 were officially registered with the Ministry.7 A year later, the figure increased to more than 130 thousand foundations, associations, NGOs, research institutions, and other organisations.8 It is worth noting that NGOs in Indonesia are also allowed to establish cooperatives or SMEs, of which there are 203,701 with a membership reaching 35.2 million people.[9] Under recently reinstated Law No. 25/1992 concerning cooperatives, the cooperatives' objectives are to improve the welfare of its members and participate in developing the economy.[10] Given these regulations it is possible to expand the definition of civil society to include cooperatives.[11]

The civil society stage has become more diverse; the stage is now "shared with more players, like political parties, religious organizations and universities, all able to speak out and publicize their views in a multitude of media outlets that have sprung up in recent years.[12]" NGOs and civil society in Indonesia are now starting to deal with the dissolve of traditionally-compartmentalized roles and responsibilities as their activities begin to overlap with those of the government and private sector. As one recent report stated, "NGOs that were united against Suharto are now without a common enemy and something to unite them to a common vision.[13]" While the government has come to recognize that "a strong civil society is an important contributor to both launching and sustaining a transition to democratic governance"[14], NGOs and CSO networks continue to be scrutinized and criticized for being vehicles of foreign intervention.

---

[5] Under state law, there are two forms of organization recognized legally: "yayasan" or foundations, and "perkumpulan" or associations. The main difference between foundations and associations is that the latter is member-based and in the way they are governed internally and under law. A large majority of NGOs in Indonesia are private foundations.

Despite the considerable number of organisations, those operating effectively are likely to be a small proportion.[15] The accountability and transparency of CSOs and NGOs themselves has also come under greater scrutiny. "Donors have started to become impatient with some of their NGO counterparts, who have difficulties accepting that they now have to fulfil much greater demands"[16]. In recent years foreign donor funding has depleted, which has led to more organizations turning to the private sector and government programmes.

Since 1985 the state has regulated member-based, citizen organizations under a Mass Organizations Law making it obligatory for social organisations to register with government. This law was largely ignored in the period of reform following 1998. However, in 2013 the law was replaced by a new controversial Mass/Societal Organizations (*Ormas*) Law No. 17, reinforcing control of foundations and associations. The Law could be used to prohibit or dissolve CSOs. Many NGOs and civil society networks deplored the Law for constricting democratic space and the freedom of civil society. The 2014 Freedom House Index's ratings for civil liberties in Indonesia declined from Free to Partly Free as a result of the new law[17].

Table 4

*Indonesia's Rank & Score: Freedom House Indices*

| Arena | 2011 | 2012 | 2013 | 2014 |
|---|---|---|---|---|
| Freedom status | Free | Free | Free | Partially Free |
| Political rights | 2 | 2 | 2 | 2 |
| Civil liberties | 3 | 3 | 3 | 4 |

Source: http://www.freedomhouse.org

The 2013 CIVICUS report hinted that the legislation could be part of the state's reaction to a perceived threat that environmental, land rights and indigenous activists pose to political and economic interests due to the "shadowy connections that can exist between transnational corporations and politicians" in the agriculture extractive and construction industries.

The annual Freedom of the Press Index produced by Freedom House illustrates that Indonesia's media remains "partly free". From 2011 to 2012 there was significant numerical improvement from 53 points to 49 with the reduction of restrictions and a greater ability of journalists to cover news more freely. From 2012 to 2014, the country's rating remained steady at 49, with slight changes in global ranking (2012: 97$^{th}$, 2013: 96$^{th}$, 2014: 98$^{th}$).[18]

Overall, the press system in Indonesia is vibrant, with a wide range of news sources and perspectives, further growing with the developments in digital media. "Indonesia's online growth in recent years is recognised as nothing short of phenomenal" (Matt Abud 2012). While the Internet is seen as a new space for debate and participation, current laws still curtail openness, accessibility, inclusiveness and place limits on its use for expression. Only a limited number of organisations like ICT Watch are addressing freedom of expression and online rights. Nonetheless, citizens are using cyber space to set up online communities and organize campaigns. Some recent examples include the commuter movement 'masukbusway.com' aimed to capture and shame traffic violators in Jakarta.

Less progressive sources of rhetoric can be found amongst a number of hard-line religious groups and leaders, such as *Front Pembela Islam* (Islamic Defenders Front or FPI), who have links with traditional religious schools (pesantren) and recruit members through these and online networks. Radical groups

organize frequent protests to apply pressure on the government and are a threat to diversity and freedom.[19]

### 2.2.2 Socio-economic context

At a macro-level, Indonesia's socio-economic situation has been improving. The country is a regional and global economic force, and has recently graduated to lower-middle income country (LMIC) status.

Table 5
*Indonesia's Rank & Score: UN Human Development Reports*

| | 2010 | 2011 | 2012 | 2013 |
|---|---|---|---|---|
| HDI Rank (scale 1 – 187 for all years except 2010 out of 169) | 108 | 124 | 121 | 108 |

Source: Human Development Report 2014 & Explanatory Note for Indonesia

In recent years, Indonesia has consistently been ranked in the medium development category of the UN's Human Development Index (HDI) measuring a long and healthy life, access to knowledge and a decent standard of living. In 2013, the HDI value was 0.684with a rank of 108 out of 187 countries and territories. However, the value falls to 0.553, or 19.2 percent, when taking into account inequality. Indonesia's HDI is above its peers in the medium development category but below the average of 0.703 in East Asia and the Pacific. The Gross National Income (GNI) per capita is steadily rising to US$ 8,970, a remarkable feat considering it was just 2,931 in 1980. Despite improvements, the 2014 report and its explanatory note show that growth is slowing and the country has yet to achieve equitable growth. For example, women only hold 18.6 percent of the seats in parliament, 10 percent fewer women reach secondary education compared to men, and women's labour market participation is 51.3 percent compared to 84.4 percent for men.[20]

The Basic Capabilities Index (BCI) produced by Social Watch offers a picture of the status of key human capabilities of accessing basic services. It utilizes three main indicators: under-five mortality rate, births attended by skilled personnel, and enrolment of children up to the 5th grade. Countries are categorized into five groups accordingly based on their BCI values: 1) Basic: 98 and over; 2) Medium: from 91 to 97; 3) Low: from 81 to 90; 4) Very Low: from 71 to 80, and; 5) Critical: values below 70. Results for Indonesia saw stable or improving scores for child and maternal health, but a regression for education. While no data beyond 2011 is available, other data sources confirm that Indonesia still has high maternal mortality rates but basic education through primary school enrolment is improving.[21]

Indonesia does not fare too well on the Social and Economic Rights Fulfilment (SERF) Index. In 2012 Indonesia achieved 67.86 percent of protecting social and economic rights. Although there was an improvement compared to 2011 values, performance worsened when compared to 2010. The country consistently preforms poorly in the areas of right to food and right to work, although it improved in fulfilling rights to education.

Table 7

*Social and Economic Rights Fulfilment (SERF) Index Values: Indonesia*

| Year | SERF Index Value | Right to Food | Right to Heath | Right to Education | Right to Housing | Right to Work |
|---|---|---|---|---|---|---|
| 2012 | 67.86 | 45.33 | 83.95 | 95.19 | 64.26 | 50.56 |
| 2011 | 65.71 | 45.01 | 85.16 | 93.43 | 63.88 | 41.09 |
| 2010 | 69.29 | 45.75 | 85.95 | 93.82 | 65.88 | 54.72 |

Source: Social Watch, Core Country SERF Indices 2010, 2011 and 2012 (Note that 2010 data was adjusted in 2013).

Trends in the country's Economic Freedom Scores produced by The Heritage Foundation and The Wall Street Journal are also rather bleak. From 2010 to 2014 the country has been categorized as 'Mostly Unfree', with only a small increase in its score from 55.5 to 58.5.[22]

These macro-level figures illustrate the complexity of the socio-economic context. While the economy has grown, 65 million people remain highly vulnerable to shocks. Disparities in income and geographic areas remain, made more complex by the number of people 'floating' between the poor and middle class'.[23]

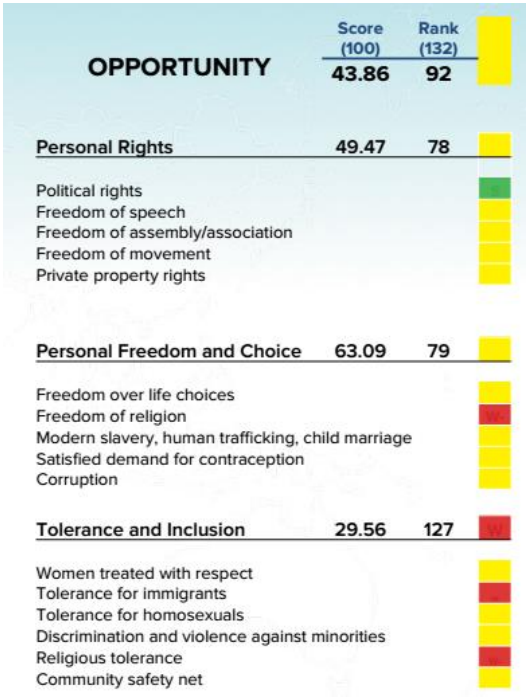

*Figure 1Indonesia's 2014 Social Progress Index Scorecard illustrating selected elements of the Opportunity component.*

## 2.2.3 Socio-cultural context

With respect to the socio-cultural context it is of interest to look at global indices that provide some insight into the level of trust between ordinary people and the extent to which tolerance exists. On a whole, Indonesia has been able to maintain peace as indicated in the improvements in scores recorded by the annual Global Peace Index. In 2010, the country scored 1.950 on a scale of 1 to 5, with 1 being the best score. This has gradually improved to 1.853 in 2014, with a rank of 54 out of 162 countries.

[22] Heritage, "2014 Index of Economic Freedom". Available from http://www.heritage.org/index/country/indonesia (accessed 26 October 2014)

[23] World Bank, News, "Indonesia Development Policy Review 2014", 23 June 2014. Available from http://www.worldbank.org/en/news/feature/2014/06/23/indonesia-2014-development-policy-review (accessed 26 October 2014)

Nonetheless, inequality, socio-economic conditions and rights claims (especially land rights) are still a source of localized incidences of conflict in Indonesia. Between 2010 and 2014 there has been a rising incidence of resource and identity-based conflicts as well as vigilantism.[24]

Amongst other components, the Social Progress Index published in 2014 examines whether there is opportunity for individuals to reach their full potential by scoring four different components: personal rights; personal freedom and choice; tolerance and inclusion; and access to advanced education. Indonesia scores low in this regard, at just 43.86 out of 100 and ranking 92nd out of 132 countries. Freedom of religion, tolerance for immigrants and religious intolerance are all considered to be weak (red), while the majority of the components are scored as neutral (yellow).

The Edelman Trust Barometer Survey, which collects annual data from 33,000 respondents in 27 countries has shown that on aggregate, Indonesians' confidence in nongovernmental organisations, government, media and businesses increased by 10 percent in the 2014 trust index. Interestingly, businesses, with 82 percent, are the most trusted of the four sectors compared to 73 percent for NGOs, 53 percent for government and 73 percent of respondents putting their trust in the media. According to survey results, Indonesians believe businesspeople are more inclined to tell the truth than their government counterparts and three times more likely to fix problems.[25]

The trends in levels of trust in NGOs over the past four years are noteworthy. In 2011, the trust level was at 61 percent, decreasing to 53 percent in 2012 and 51 percent in 2013. Reports claimed this was due to a lack of transparency and accountability. Edelman reported that the trust levels in 2013 were the lowest amongst eight Asia Pacific countries surveyed, ascribed to the growth of horizontal, peer-to-peer networks and a preference for social media.[26] The most recent results released in 2014 show substantial jump to 73 percent in 2014 which is attributed to NGOs now being able to 'walk the talk' in accountability and transparency, as well as the emergence of 'corporate NGOs'.[27]

## 2.3 Civil Society context issues with regards to the MDG

Land rights and natural resource protection have been a long-standing issues for Indonesia. While Indonesia has adopted and amended laws to improve the rights of smallholders and indigenous communities, many of these regulations have faltered in their implementation. Part of the issue lies in the overlap and lack of clarity of laws adopted that regulate different sectors and local legislation. Another issue is that there is a lack of oversight in the procedures such as granting permits and licensing. These problems, which are commonly found across development sectors, are compounded by a lack of information among local communities on what the laws regulate and their rights vis-à-vis them.

Indonesia's agricultural sector remains dominated by smallholders. The sector is the second largest contributor to the country's GDP after manufacturing and remains the largest sources of employment. Nonetheless, the proportion of labour employed in agriculture has been declining steadily from 56

percent in 1990 to 38.3 in 2010.[28] Rice is a staple food crop and one of the country's most important agricultural products. Yet, Indonesia has become the seventh largest rice importer[29].

Indonesia's agricultural productivity has stagnated since the 1990s due to a decrease in investments in the sector, a decline of extension services and a lack of beneficial impacts from technologies introduced to enhance productivity[30]. Prior to this period, the country had invested significantly in the agricultural sector. Under the Suharto regime, agricultural development was given primary priority and an agricultural modernization program known as the Green Revolution, was stepped up. Although the Green Revolution resulted in spectacular increases in rice production, the large-scale introduction of hybrid crops that were heavily dependent on chemical fertilizers and pesticides, left farmers vulnerable to pest-resistant epidemics[31]. This top-down approach pushed farmers to adopt hybrid rice production. Vast amounts of seeds were purchased from companies (some of which had political connections) and offered free of charge to farmers. Many farmers signed up to these schemes, but discovered that hybrid varieties are highly susceptible to pests and diseases and that more pesticides and chemical fertilizers are needed. "In Indonesia, as elsewhere in Southeast Asia, the Green Revolution disproportionately benefited wealthier rural residents, who used the new technologies to increase production and shed traditional obligations to women and poorer neighbours, who were pushed onto more marginal land or off the land entirely"[32]. These initiatives also undermined farmer creativity and disempowered bottom-up approaches that encouraged farmers to share knowledge about seeds[33]. Despite its intentions to address food insecurity and self-sufficiency, the Green Revolution has become known to be one of the most unsuccessful development projects in history[34].

The 1980s saw the emergence of the Farmer Field School (FFS) in Indonesia, introduced to address the risks of high use of toxic pesticides promoted aggressively by the government and the private sector[35]. Integrated pest management control methods and more holistic on-the-ground support to farmers were geared towards helping farmers understand agro-ecology and cultivation problems and their causes. Many NGOs and development actors continue to apply the FFS approach until today as a means to carry out group-based experimental learning activities for farmers.

Before becoming a World Trade Organisation (WTO) member in 1995, Indonesia passed a Law that denied farmers control over their basic means of production. The Law on Plant Cultivation System (Law No. 12/1992) resulted in the loss of knowledge of techniques and criminalized farmers for using and distributing certified seeds[36]. In 2000, after entry into the WTO, the Law on Plant Variety Protection (No. 29/2000) was passed to protect intellectual property, including plant varieties. The Law in essence forbade farmers from producing progenies or varieties being produced by other

institutions or individuals.[37] This further limited the creativity of farmers and seed breeders and allowed for private sector monopolization of seed distribution[38].

More recently, two Laws have been passed that are seen as curtailing farmer rights. These are: Law No. 18/2012 on Food and Law No. 19/2013 on the Protection and Empowerment of Farmers. The former is considered by critics to offer little protection to small businesses and complicates the right to food with unclear accountability as to what the state's obligations are to protect citizens' right to food[39]. The latter is criticised for being discriminatory and for not covering land ownership rights of smallholder farmers and allowing only for rental and usage rights[40].

The regulatory environment has had a negative impact on the recognition of farmers' rights. FIELD has collaborated with other NGOs to strengthen the position of farmers. These efforts led to a constitutional court amendment of Law No. 12/1992. On the ground, FIELD's efforts in Indramayu, West Java (considered to be one of the main rice-producing areas in the country) have focused on participatory plant breeding and certification of seed varieties. Without certification, farmers have limited rights to sell seeds.

# 3 Description of FIELD and its contribution to civil society/policy changes

## 3.1 Background FIELD

Farmers' Initiatives for Ecological Livelihoods and Democracy (FIELD) was established in June 2001 by former FAO staff who provided technical assistance for the Integrated Pest Management (IPM) Programme for farmers in Asia between 1998 and 2002. The same team that established FIELD also helped to found the Indonesian IPM Farmers Association (IPPHTI) in 1999. FIELD aims to develop farmer and rural community movements in order to enhance democracy, justice and a healthy environment. They aim to reach this long-term goal by strengthening farmer and rural community movements through participatory education, action research and network building.

FIELD has been part of the creation and application of widely praised approaches such as farmer field schools, farmer-to-farmer training and farmer action research. IPPHTI is FIELD's main partner in organising farmer-to-farmer movement, strengthening farmer-led research, and advocacy on farmer rights. FIELD has also trained more than 26,000 men and women farmer trainers experienced in facilitating and supporting others farmers.

FIELD is based in Indramayu, West Java, where it continues to have a presence. In 2002, FIELD initiated the 'Participatory Enhancement of Diversity of Genetic Resources' (PEDIGREA) project in Indramayu. Indramayu was chosen because it produced the largest share of rice in Indonesia and was the target area of Government's Green Revolution Program in 1970s. Through farmer field school interventions, one of the PEDIGREA program components focused on Participatory Plant Breeding (PPB), or the selection and development of crop varieties by farmers, for rice and vegetables. Since the 1970s, the government has promoted the use of agricultural company-produced farmer inputs such as seeds and fertilizer. Farmers have become increasingly dependent on these external inputs to the expense of genetic and agro-diversity. This has eroded much of their traditional knowledge seed varieties. With the introduction of Law No. 4/2006 on the Protection of Plant Varieties, the state has exercised more control and constricted farmers' breeding practices.

FIELD has continued to work on the issue of PBB, and considers it critical for farmers to retain knowledge and expertise in this area. FIELD has expanded its efforts to strengthen farmers' organisations through participatory education, networking and action research to include other areas such as Ciamis, West Java and Lampung, Sumatra.

## 3.2 MFS II interventions related to Civil Society

The so-called 'Green Revolution' started under Sukarno in the 1960s and intensified in the era of the New Order military regime, resulted in few farmers breeding or conserving their own seed varieties/strains. With the intensification of agriculture, farmers have become dependent on seed companies (many of them importing GMO seeds). Furthermore, after Indonesia became involved in in the WTO, Indonesia has become trapped in the privatization of seeds – companies, government and universities are the only ones able to obtain licenses for seed production and distribution. Under the Law on Cultivation System, farmers are prohibited from undertaking plant breeding and are often discriminated against, criminalized or imprisoned. This Law is considered by many to be violating human rights.

In the current agricultural system, farmers have become dependent on private sector companies for agricultural input and technical knowledge. Dependence has become structuralized by government regulations and the political economy. Many of the seeds available on the market require intensive use of fertilizer and pesticides, with obvious degradation effects on the environment. The agricultural

sector as a whole is contributing less to the national economy and many of the nation's poor live in rural areas.

To address this dependence, FIELD has adopted a twin-strategy of supporting farmers groups and promoting seed legalization. At the grassroots level, FIELD develops farmer seed systems, raises farmer awareness, links with the local government for recognition of farmer seeds, and organises farmers (through cooperatives and credit unions) to give them a better position vis-à-vis private companies and middlemen who provide agricultural inputs to farmers. Organising farmers is considered to be a vital step in improving their position vis-à-vis external market forces and promoting (organic) agricultural products. Seed legalisation is a means for farmers to regain control and reduce the level of dependence on external inputs. In turn this is expected to improve productivity and sustainable agricultural cultivation.

FIELD is well connected with national and international networks that work on farmer's rights. At the national level, the institute has a strong alliance with NGOs assisting farmers and engaged in rural community development. FIELD also collaborates with organizations to advocate for policies that protect farmer rights, such as demanding for a constitutional court review of the Law on Cultivation System to allow small-scale farmers to breed their own varieties/strains. At the international level, FIELD involved in the global network to support organic agriculture and farmer empowerment.

## 3.3 Basic information

Table 8

*Basic information FIELD*

| | | Details |
|---|---|---|
| Name of SPO | : | FIELD |

Sources: Project documents

[41] Costs that relate to civil society development or policy influence are those costs that possibly contribute to the development of the CIVICUS dimensions, excluding coordination and office costs; staff costs and financial reserves.

# 4 Data collection and analytical approach

## 4.1 Adjustments made in the methodology of the evaluation

The evaluation began with an input-output-outcome analysis drawing on available reports and other documentary evidence. The analysis was able to identify two main possible focus areas for further evaluation: namely strengthening of intermediary organisations as well as lobby and advocacy. However, considering that reports by the SPO were rather weak, the evaluation team was only partly able to benefit from the analysis.

The evaluation team followed the operational guidelines of the evaluation methodology to a great extent, and was able to hold a workshop with all of FIELD's sub-groups. In practice, the workshop lasted six hours, with full participation of all sub-groups. However, due to unfamiliarity with CS dimensions and the large number of workshop participants, the workshop was not fully efficient.

Another obstacle was the lack of participant preparation for the workshop, despite the evaluation team's efforts to share the baseline report and CS dimensions change prior to the workshop. All of the participants found it difficult to respond to the CS dimensions of change questions, mostly because they did not understand the questions. This required the evaluation team to explain the questions one-by-one and encourage responses from the participants.

Within the time and resource limits of the evaluation, the evaluation team decided to focus on assessing civil society dimensions and results amongst two of the six cooperatives supported by FIELD. One large cooperative (Jati Asih with assets valued at IDR 300 million or 4,200 Euro) and one small cooperative (Karya Peduli Tani with assets valued at IDR 60 million or 21,400 Euro) were selected.

## 4.2 Difficulties encountered during data collection

During data collection, the team experienced the following difficulties:

- Workshop participants did not really understand, or were unfamiliar with the CS indicators or the CIVICUS framework. They found it difficult to relate FIELD's situation with these indicators, although most of them participated in the baseline process. This lessened the effectiveness of the workshop.
- FIELD does not have a strong monitoring and evaluation system in place, nor does it have dedicated personnel for monitoring. As such, it added to difficulties in finding hard data and effected the agreement on the outcomes. FIELD has not monitored or reported to Hivos on important indicators of progress such as the number of farmers benefiting from FIELD's Farmer Field Schools (FFS), quantitative data on the total area that has applied organic farming practices, the number of farmers cultivating their own seeds, the number of farmers accessing loans from the cooperatives, cooperative membership, and qualitative data on participation and effectiveness of interventions.
- The objectives that FIELD had set were rather unrealistic given project's timeframe. The project objectives were identical with the SPO's core programme. Support from Hivos only constituted 8-10 percent of FIELD's entire programme (2012).

## 4.3 Identification of two outcomes for in-depth process tracing

FIELD was not selected for in-depth process tracing, which means that the evaluation team only conducted a quick assessment of outcomes.

The first outcome, strengthened capacity of farmers' cooperatives, was selected based on the following considerations:

- This outcome is in line with MFS-II end line evaluation orientation for Indonesia to focus on strengthening the relations with other (intermediary) organisations in civil society to undertake joint activities. Considering the difficulties in collecting information, it still seemed sensible to find evidence to confirm this outcome's achievement.
- It is relevant with FIELD's Theory of Change as the cooperative can be seen as part of 'production infrastructure' which aims to organise small farmers and marginalized groups so that they have access to, and control of resources. As the cooperative can be considered a means to protect farmers against loan sharks and middlemen, it is sensible to assume that the outcome is crucial to the ToC's ultimate goal of independent and sovereign farmers.
- The outcome can also be used as a measure of FIELD's effectiveness in civic engagement, especially how the SPO attracts farmers into the cooperative model and how members can scale-up or sustain organic farming practices promoted by FIELD.

The second outcome, "more guarantees for farmers' rights to breed and plant seed varieties (i.e. farmers are better positioned to have the freedom to plant different crop strains by having legalisation in place that protects their rights)." was selected to represent FIELD's effectiveness in policy influencing. It has been selected based on the following considerations:

- This outcome is quite a substantial achievement as it provides a strong basis for the continued efforts of FIELD to defend farmers' rights and benefits farmers outside the direct intervention area.
- The outcome selected also represents one of the ToC's preconditions of creating an enabling policy environment for farmers.

# 5 Results

## 5.1 Results obtained in relation to intervention logic

Table 9

*Overview of results achieved in relation to project plan FIELD*

| Result Level | Description | Level of achievement |
|---|---|---|
| Specific Objectives 1 & 2 | Strengthening community economic institutions; development of rural economy through cooperatives and community business development | Partially achieved: 6 cooperatives (out of a total 8 planned) established but not yet effectively supporting community business/economy. Membership of 161 (no sex-disaggregated figures), falling well short of target of 1,500 for the first year alone.<br><br>Benefits for cooperative members include: compulsory savings schemes, collective sale of agricultural produce for higher prices, utilizing cooperative savings to improve irrigation canals.<br><br>Focus on rice production (local varieties/seeds). Eight of the nine farmer groups supported have produced rice. No data for change in employment and business opportunities. |
| Specific Objectives 3 & 4 | Legalisation of farmers' seeds: legal guarantees for plant breeding and recognition of farmers' products | Almost achieved: 8 farmer groups actively involved in seed breeding. They have experimented with a range of local seeds (more than a dozen local names appear in the report, but not sure about the exact numbers). 2 seeds selected. Certification process still appears to be underway.<br><br>FIELD together with 9 other NGOs called for a constitutional court review of Law No. 12/1992. Farmers in Indramayu involved in national advocacy network. On 18 July 2013, the constitutional court supported the proposed reviews declaring that Articles 9, 12 and 60 void for small-scale farmers. More government support still required for the development of informal farmer seed systems.<br><br>The technical process of seed registration has been completed and is still awaiting government legalization. Two strains have been identified: Gadis Indramayu (Code IPPHTI 1) and Pemuda Idaman (Code IPPHTI 2). |

From the reports submitted by FIELD to Hivos, it is apparent that for some of the objectives and indicators set, FIELD has faced difficulties in monitoring the results. For example, there was insufficient monitoring and documentation of improvements in the rural economy and the establishment of new business opportunities. The extent to which the objectives were achieved is rather difficult to assess given that they are largely unrealistic and rather vague. While FIELD may have underachieved against its original plan, the results of the interventions are quite substantial, especially in the area of legal guarantees for farmer plant breeding. FIELD also helped farmers to prepare their strategy to sustain the investment made during the program (exit strategy). One of the intended outputs in this regard was the existence of a strategic action plan on the implementation of ecological agriculture and plant breeding in Lampung. FIELD organised a workshop with farmers in Lampung to prepare an exit strategy[42].

[42] Lampung Exit Strategy Report, 2012

## 5.2 Changes in civil society in the 2012-2014 period

### 5.2.1 Civic engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

FIELD has a long history of providing small farmers (defined as those owning no land or owning land up to 2 hectares) with assistance to better understand and adopt sustainable agricultural practices within the existing environment and political economy. FIELD works with both farmer groups and cooperatives, which are often set up under farmer groups. The number of groups supported in Indramayu remains the same as during the baseline in 2012 (i.e. eight farmer groups and six cooperatives).

FIELD's targeted beneficiaries remain unchanged. For the seed system program, they work mainly with small farmers that own small plots of land, while for the credit program, the targeted beneficiaries are landless farmers, forming the majority of FIELD's target groups. There is a gender balance in the cooperative membership. However, as during the baseline, there are no specific female-targeted interventions. FIELD's project management continued to take the needs of the rural community in account in planning and implementation. Farmer groups were facilitated by FIELD to organise themselves into cooperatives. Six cooperatives were established since the start of the project in 2011 and the evaluation team has evidence that membership of two cooperatives more than doubled (from 77 to 166 members) since the baseline with a slight increase in female membership, reaching 45 % in 2014.

During the baseline, FIELD's focus was on building common critical awareness and setting up farmer organisations. FIELD facilitated many groups to learn from each other using the Farmer Field School (FFS) method. FFS is an 'open-air' and 'on-site' process that allows for fluid interaction between farmers and field staff. FFS is used to develop farmers' cultivation capacity as well as a space for communal learning. The cooperatives are considered to be a means to keep farmers away from middlemen and loan sharks so that they can put to practice what they have learnt in the FFS without external pressure. In addition, learning and exchange have moved beyond just the FFS. FIELD facilitated linkages between the cooperatives they support and the local government, which resulted in cooperative members being assigned to train government-supported cooperatives in West Java. Although FIELD has continued with FFS, in the last two years, more attention has been paid to networking and advocacy.

The 2012 baseline found that FIELD mostly worked through non-political and non-state actors and facilitated farmers in the process of seed certification by accompanying them through bureaucratic steps. In the last two years, FIELD utilized its network of non-governmental organizations and governmental access to influence policies, even at the highest level of policy advocacy, i.e. judicial review of regulations by the constitutional court (MK). FIELD facilitated meetings between farmers and the local government, as well as other CS actors to revaluate the impacts of regulations on farmers. Farmers also testified in court and provided inputs to the proposed revisions put forth by FIELD and its coalition.

**Score baseline 2012 on an absolute scale from 0-3:** **2**
**Score end line 2014, relative change on a scale of (-2, +2):** **+1**

### 5.2.2 Level of organization

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

FIELD's level of organisation has improved since the baseline. Relations with other CSOs were strengthened as the SPO worked together in a number of coalitions to propose judicial reviews of several Laws. From 2012 to 2013, revisions to the Crop Cultivation Law (No.12/1992) were put forth to the Constitutional Court. These lobby efforts demanded a higher frequency of coordination

meetings. The organisations with whom FIELD collaborated with in lobby and advocacy efforts are as follows: the Indonesian Human Rights Committee for Social Justice (IHCS), Indonesian Farmer Alliance (API), Bina Desa Sadawijaya Foundation, People's Coalition for Food Sovereignty (KRKP), Indonesian Farmers Integrated Pest Control Organization (IPPHTI), Palm Oil Farmers Union (SPKS), Sawit Watch, Indonesian Farmer Union (SPI), and the Alliance of Agricultural Reform Movement (AGRA), Konsorsium Pembaruan Agraria (KPA), Solidaritas Perempuan (SP), WALHI, Indonesia for Global Justice (IGJ), and Koalisi Rakyat untuk Keadilan Perikanan (KIARA).

In defending the interests of the farmers, FIELD worked at two levels: at the grassroots level FIELD's support to farmers groups and cooperatives strengthened organisational, financial and cultivation (especially in the area of seed breeding) capacities of farmers. Farmers have more independence to make their own cultivation choices and financial capacity through the cooperatives to deal with loan sharks. Networking amongst farmers also led to a mobilisation of information and knowledge to identify problems and solutions in cultivation and plant breeding. At the macro level, FIELD has been active in CSO coalitions to provide more protection for farmers under regulatory frameworks by proposing the amendment of Laws such as No. 12/1992, which obtained a favourable constitutional court ruling in 2013 (Decree of MK No. 99/PUU-X/2012).

At international level, FIELD took part in international and regional networks to lobby against World Trade Organization (WTO) policies. FIELD took advantage of the WTO meeting held in Bali in December 2013, to collaborate with other global CS actors to voice their protest against trade agreements.

On the composition of financial resources, there is no evidence that FIELD has been able to diversify funding sources. Currently its main donors are USAID and FAO, and the SPO also receives Unilever CSR funding. Neither Oxfam Novib nor Hivos have continued funding the SPO.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): +1**

### 5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision-making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

Like in the situation in 2012, FIELD's internal control system follows the government regulations on foundations. Each program is supervised and controlled by the board of Trustees and the supervisory Board, which have the right and authority to request evaluations and to hold the executive accountable. At least once a year, the Supervisory Board and the Board of Trustees meet and request a progress report. Cooperative members are informed of the financial conditions and have the right to inquire with the cooperative on these issues or to express their ideas in the general assembly.

However, comparing the two cooperatives visited, the evaluation found that the leadership model or style influences the level of participation of cooperative members.

There is no change in the composition of social organs. Instead of including farmers or target groups in their social organs, FIELD's strategy is to help organise farmers by establishing and supporting organisations that they can run on their own, such as IPPHTI.

With regards to audit arrangements, these are conducted annually but are still project-based as during the baseline.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perceptions of both civil society actors

(internal) as well as actors outside civil society are taken into account. Specific sub-dimensions for this evaluation are the extent to which the SPO has contributed to engaging more people in social or political activities, strengthening CSOs and their networks, and has influenced public and private sector policies.

The level of satisfaction among the cooperative members remains high over the last two years. The two visited cooperatives both expressed that they were very satisfied with FIELD's program since they were able to gain knowledge, obtain benefits from the established cooperatives, increase their incomes after implementing organic farming taught by FIELD, broaden their network is, and become less dependent on middlemen. Cooperative members also said that through FIELD's support there is a greater interest in farming and that farmers have regained pride in what they do[43]. But they did express that they still had difficulties to link to markets to sell their produce and seeds; and in this area they are still dependent on middlemen[44].

With regards to relations with the public sector, the end line evaluation found that FIELD has been able to continue its strategic relation with the government. At the national level, FIELD has been able to influence policy change with the revision of the Law on Cultivation System. At the village level, the village government has been very supportive of the cooperatives. In addition, the local government has also helped fund multi-location trials for seed breeding.

FIELD's policy interventions at the national level are helping farmers gain a better position vis-à-vis the commercial interests and a dependency on the private sector for agricultural inputs. According to the head of a FFS in Indramayu, the policy revisions have helped farmers gain more authority and power over their production resources, which is considered as 'farming democratization'. With the amended Law No.12/1992, farmers' dependency on seed companies like Monsanto has been decreasing, as they no longer have to buy and use mass produced, hybrid seedlings and fertilizers[45].

Box 1: Seed Law Victory in Indonesia

*We don't want to live as second class citizens anymore. We have always been discriminated against, but we are legal citizens of this country. We had to breed our local seeds in hiding, since if government knew about this we wouldn't get any support from government. This victory at the constitutional court gives us back our Dignity. Recognition and openness to continue our creativity is the dignity for farmers and breeders.*

- Joharipin, a breeder from Indramayu, Kertasemaya, Indonesia)

The Plant Cultivation System Law, adopted in 1992, was meant to improve and expand diversification of crops to meet the needs for food, clothing, housing and health, as well as to support domestic industries and export; it was also intended to improve income and living standards for farmers and encourage the expansion and distribution of employment and business opportunities.

But the agricultural system it has enabled relies on industrially-produced seeds and other expensive inputs. Farmers are denied control over their basic means of production - seeds and soil - and their own techniques and technologies are disappearing.

A coalition of groups brought the case to the constitutional court in September 2012, arguing that the Plant Cultivation Law unfairly treated small farmers and breeders as though they were large commercial enterprises.

The court agreed, ruling that articles 9, 12 and 60 are unconstitutional. This means that peasant farmers will no longer need permission from the government to collect local seeds, produce their own seeds, or to distribute it.

"This victory at the constitutional court is a victory for all struggles of farmers and local breeders, not only on Indonesia but for all peasants and local breeders that feed the world," said Amalia Pulungan, a

[43] Interview withRokhi, vice chairman of Jati Asih cooperative
[44] Interview with Mr. Jito, the chairman of the cooperative Karya Peduli Tani
[45] The amendment of the Law on Cultivation System covered a number of articles. These revisions also have implications on how private sector agencies manage their seed businesses.

policy advisor for the Indonesia Peasant Alliance (API, Aliansi Petani Indonesia).

**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.5 Civil Society Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in Chapter 3. In this section we describe how FIELD is coping with that context.

Since the baseline, FIELD has demonstrated its capacity to respond to the existing operational context through Hivos and non-Hivos supported interventions. At the grassroots level, FIELD continued to support the organisation of farmers in groups, cooperatives and forums to help them to deal with daily challenges faced to secure a sustainable, agricultural-based livelihood. The focus has been on making smallholder farmers more resilient and independent. FIELD has also been well aware of the impacts of policy frameworks on small holders. For this reason, they have been actively engaged in coalitions at the national level to lobby for revisions of regulations that have a direct impact on farmers.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 0**

## 5.3 To what degree are the changes attributable to the Southern partners?

FIELD was not selected for in-depth process-tracing. There are two outcomes achieved in the 2011-2014 period that were selected for quick process-tracing:

1. Strengthened capacity of farmers' cooperatives
2. More guarantees for farmers' rights to breed and plant seed varieties (i.e. farmers are better positioned to have the freedom to plant different crop strains by having legalisation in place that protects their rights).

The following sections will describe the pathways to these outcomes and the information that confirm or reject in each pathway.

### 5.3.1 Strengthened capacity of farmers' cooperatives

For FIELD, farmers' cooperatives/credit unions are a key element for the development of rural economy. Through these institutions, farmers can access credit from compulsory savings schemes to develop new business opportunities. There are 6 FIELD sponsored cooperatives (out of 8 planned) established during the program period. In 2011, the total value of assets of the cooperatives reached IDR 87 million (roughly 13 million/cooperative) with an average of 27 members in each cooperative. In 2011, Hivos and FIELD reported that the number of cooperative members was lower than expected, with only around 30 percent of targeted membership being fulfilled due to inadequate managerial capacity. Hivos assigned a consultant to assist the cooperative to develop their management skills. Although there were no reported membership increases reported up until 2013, the evaluation team found that two cooperatives (Jati Asih and Karya Peduli) now have more members than when they started out in 2011. This is seen as an indicator of improved cooperative capacity. The tables below summarize cooperative growth:

Table 10

*Cooperative growth 2011-2014 I terms of membership and asset value*

| Cooperative | 2011 | | | 2014 | | |
|---|---|---|---|---|---|---|
| | Male | Female | Asset value | Male | Female | Asset value |
| Jati Asih | 25 | 10 | 1,5 million IDR | 21 | 21 | 1,1 million IDR |
| Karya Peduli Tani | 60 | 41 | 300 million IDR | 32 | 33 | 60 million IDR |

Sumber Asih Cooperative has been able to recruit 101 members in 2014 whereas in 2011, its membership was just 35. Karya Peduli Tani Cooperative now has 65 members, compared to 42 in 2011. Although assets and membership growth are two key elements of institutional capacity, the focus of the establishment of the cooperative is on the capacity of farmers to organize their economic activities. Therefore, the analysis focuses on the level of farmer organization.

Based on the data from program reports and interviews conducted during the end line evaluation, there are two possible pathways described below that explain the outcome.

*Information that confirms or rejects the pathways:*

1. Pathway 1: FIELD strengthened the capacity of farmer cooperatives through trainings and technical assistance

Information that *confirms* pathway 1:

At the start of FIELD's interventions funded by Hivos, an assessment was carried out in Indramayu, which resulted in the identification of eight villages and potential farmer group members. Prior to the 2011-2013 Hivos-funded project, FIELD had already been organising farmers into 10 groups and providing them with training on plant breeding through FFS in collaboration with PEDIGREA[46].

During the implementation of the Hivos-funded project, basic training was provided on the areas of good governance principles for representatives from 7 villages in Indramayu, as well as representatives from Purwakarta and Subang. 2 to 5 people from each village were trained, amongst them the future cooperative board members (Source: Project Reports). In 2012, six cooperatives were established. Further training was conducted in 2012 for credit cooperatives that had been set up and were running (Wanguk Sliyeg; Jengkok, Tenajar, kedokan, Kalensari, Bunder). These trainings focused on skills and capacities needed to run a credit cooperative, such as risk management, financial planning, organisation and cash flow. Members of cooperatives expressed their satisfaction of the unique cooperative model offered. Short, simple procedures, security, and soft loans with low interests make the cooperative a preferred source of credit compared to other existing institutions such as banks.

The cooperatives also functioned to manage seeds of new varieties that resulted from breeding activities, which included the distribution of seeds and supervision of planting[47].

Information that *rejects* pathway 1:

Although the 2013 progress report mentioned that FIELD-sponsored cooperatives have been improving their capacity to provide financial services to their members and improve their assets and profits, this claim is not backed by evidence such as cooperative financial statements or formal organizational capacity assessments.

2. Pathway 2: After the establishment of the cooperatives, their institutional capacity has been growing without direct support from FIELD but due to support from FFS.

The evidence that the establishment of the cooperatives was initiated by FIELD is acknowledged by all the informants. However, the improved institutional capacity of the cooperative members after their establishment can also be explained by support from the FFS and farmers groups. In parallel to the

[46] Winarto, Y. T. and Ardhianto, I. 2007. *Becoming Plant Breeders, Rediscovering Local Varieties: The Creativity of Farmers in Indramayu, Indonesia*. Available from http://www.sristi.org/cms/files/creativity_of_farmers.pdf (accessed 26 October 2014)

[47] Mohammad Suhendrik, "Desa Gadingan inspirasi pertanian daerah", 21 June 2012. Available from http://indramayugadingan.blogspot.com/ (accessed 24 December 2014)

cooperative establishment, trainings and plant breeding activities continued through the FFS. Farmers were encouraged to join the cooperative to be able to receive loans for both productive activities.

Information that *confirms* pathway 2:
During the end line evaluation, the evaluation team found that FIELD no longer has close relations with all the cooperatives. It was difficult for FIELD to provide information on the current status of all six cooperatives. This suggests that FIELD's support to the cooperatives did not go beyond providing assistance in the formal establishment and developing procedures and mechanisms to run the cooperatives.

In general, the evaluation team observed that during the Focus Group Discussions held with farmers from the two cooperative visited, participants were enthusiastic about sharing how they have benefitted from the cooperative. They mentioned that they gained knowledge on how to produce seeds themselves. The advantage of this was that they could save money and no longer had to purchase seeds. According to the respondents, the cooperative also taught them how to produce their own organic fertilizer and pesticides. By not having to spend money on purchasing agricultural inputs, cooperative members were able to pay off their debt to middlemen. In fact, Karya Peduli Tani, before forming a cooperative, was already able to produce sufficient seeds themselves since 2008 and no longer needed to purchase seeds[48]. This indicates that much of the valued skills and knowledge gained have actually been derived from the FFS and further disseminated through the cooperative mechanism, rather than through direct interventions by FIELD targeting the cooperative.

Respondents also mentioned that a farmer group had taken a loan from the cooperative to rent land on which they practiced organic farming. They said that since organic farming has been financially more beneficial, they were motivated to increase their production capacity. This is in line with the cooperative policy to prioritize loans for productive activities rather than for consumptive expenses.

Information that *rejects* pathway 2:
Information that confirms pathway 1 serves as rejecting evidence for the second pathway, i.e. that institutional capacity was improved through interventions other than direct training to cooperatives by FIELD.

*Conclusion*
It is clear that the establishment of the cooperatives are to be attributed to FIELD's interventions. FIELD's support partially explains the increased institutional capacity of farmer cooperatives and their members. There is insufficient evidence to prove that the establishment of the cooperatives have led to improved business opportunities or production capacities. Rather, the available evidence indicates that the trainings provided through the FFS and later through the cooperative have in fact been critical to strengthening productive capacities. Thus, the evaluation team concludes that the capacities of the farmers' cooperatives have been strengthened both by FIELD's trainings that were aimed at establishing institutional capacities, as well as continued assistance by the cooperative members themselves and the FFS to increase productive capacities.

### 5.3.2 More guarantees for farmers' rights to breed and plant seed varieties

At the community level, FIELD supported participatory plant breeding and community seed registry of rice varieties. This involved the selection, breeding, planting (multi-location tests), verification, and testing of potential seed strains by farmers in four districts. All activities were closely monitored by the Indonesian Institute for Rice Research (BALITPA). Smallholders were supported with IDR 173 million from Hivos to carry out these activities, which included gaining acknowledgement of varieties by BALITPA. Three farmers' groups successfully bred a new variety of rice.

However, the formal recognition for farmers' seeds was still inhibited by national regulations, specifically by Law No. 12/1992 on Plant Cultivation System. This Law had in the past resulted in intimidation, losses and criminalization of farmers. Farmers from Indramayu were actively involved in

[48] Haryo Damardono and Hermas E. Prabowo, "Perlawanan Petani Pemulia Indramayu", *KOMPAS.com*, 17 September 2008. Available from http://entertainment.kompas.com/read/2008/09/17/01522177/perlawanan.petani.pemulia.indramayu (accessed 24 December 2014)

a national advocacy network that called for the revision of articles in the Law to guarantee the rights of farmers to produce their own seeds. Lobby efforts began in 2010. The law was considered to constrain farmers' right to cultivate their own seeds, reducing varieties, and increasing farmers' dependency on mass-produced, commercialized seeds.

On 18 July 2013, the Constitutional Court signed a revision to the 1992. Small-scale farmers are now allowed to breed their own varieties and as such are less dependent of commercial seed companies to buy expensive and sometimes fake seeds.

There are two pathways that explain this outcome and FIELD's contribution.

*Information that confirms or rejects the pathways:*

1. Pathway 1: FIELD played an important role in advocating for the revision of Law No. 12/2012. FIELD developed policy inputs based on its long-term experience in supporting farmers to conserve and breed local seed varieties.

Information that *confirms* pathway 1

In 2010, FIELD organised a workshop on the protection of farmers' rights in the conservation of plant varieties with Hivos' support. During the workshop several inhibiting regulations were discussed, including Law No. 12/1992 and specific articles on seed varieties and breeders rights (Articles 8 & 9)[49].

The Constitution Court decision revising the 1992 Law, No.99/PUU-X/201250 clearly mentions FIELD as one of the parties that requested the judicial review of the Law. The other parties mentioned are: the Indonesia Human Rights Committee for Social Justice (IHCS), Aliansi Petani Indonesia (API), Yayasan Bina Desa Sadjiwa (Bina Desa), Koalisi Rakyat untuk Kedaulatan Pangan (KRKP), Ikatan Petani Pengendalian Hama Terpadu Indonesia (IPPHTI), Serikat Petani Kelapa Sawit (SPKS), Sawit Watch, Serikat Petani Indonesia (SPI), Aliansi Gerakan Reformasi Agraria (AGRA), and two farmers. The aforementioned NGOs and FIELD are part of a coalition called *Koalisi Kedaulatan Petani Pemulia Tanaman Indonesia.* Articles 5, 6, 9, 12 & 60 were revised.

One of the two farmers that are named comes from Indramayu District, where FIELD has been actively supporting farmers since the mid-2000s. The former director of LPPSLH (part of KRKP coalition) reported that FIELD had been organizing the overall joint advocacy process. Two publications produced by FIELD in 2009[51] were submitted as evidence to the Constitutional Court.

FIELD together with IHCS organised several consultations with the farmers to inform them of the judicial review process, as well as to obtain testimonies and identify potential farmers willing to testify in court[52]. In the court proceedings, Joharipin from Tani Karya Peduli (FIELD's target group), is cited as a witness testifying on behalf of the plaintiffs requesting a judicial review.

Information that *rejects* this pathway
There is no rejecting evidence that FIELD was not part of the coalition that lobbied for the judicial review of Law No. 12/1992.

2. Pathway 2: FIELD did not contribute to the outcome: the CSO coalition for Food Sovereignty (*Koalisi Kedaulatan Petani Pemulia Tanaman Indonesia)* was behind the judicial review initiative, without any FIELD involvement.

Information that *confirms* this pathway:

[52] Didiet C'cars, "Petani Indramayu Siapkan Strategi ke MK", 15 October 2012. Available from https://haideakiri.wordpress.com/2012/10/15/petani-indramayu-siapkan-strategi-ke-mk/#more-467 (accessed 24 December 2014)

In 2010, farmers from the Solidarity for Farmers' Sovereignty (Solidaritas Kedaulatan Petani or SKP) rallied in Kediri, East Java to demand for the revision of Law No. 12/1992. The farmers felt victimized by the law, which they saw as serving the interests of foreign investors and seed companies. The rally followed a jail sentence for a local farmer accused of producing corn seeds illegally. Aliansi Petani Indonesia (API), helped to coordinate the actions[53].

However, of note is that API is a member of the collation it shares with FIELD. It is likely that similar local actions took place and were supported by members of the coalition, but advocacy efforts were jointly undertaken.

Information that *rejects* this pathway

All information confirming pathway 1 rejects pathway 2. In addition, there is no evidence of any other CSOs in Indonesia lobbying for a revision of Law No. 12/1992 without engaging FIELD.

*Conclusion*
FIELD as a member of a coalition that lobbied the government played an important role in achieving the outcome. The coalition is a *necessary and sufficient* explanation to the outcome in which FIELD plaid a key role. Without FIELD support, the evidence presented to the Constitutional Court would have been weaker and it is unlikely that the farmers who testified or played a role in collecting evidence would have been able to participate. Apart from helping to organise other CSOs in joint advocacy efforts, FIELD provided evidence for the judicial review based on its extensive experience in seed certification, testing and legalization.

## 5.4 What is the relevance of these changes?

### 5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

In the 2012 Theory of Change (ToC), FIELD identified that the marginalization and poverty of farmers were exponents of structural problems. As such, FIELD focused not only on improving farmer welfare and security, but intended to take up issues that were obstructing the independence and sovereignty of farmers. FIELD's ultimate goal is to ensure farmers' independence and more secure control over their own interests, in particular in terms of the seed system. An essential component of FIELD's mandate has been to support the development of a 'farmers movements' by providing them support to organise themselves and understand the agro-ecosystems so that they can improve their resilience and self-reliance.

The achievements and outcomes described in the previous chapters are illustrative of FIELD's key strategies. FIELD has supported policy revisions that provide for better agricultural opportunities for farmers. The focus of FIELD's lobby agenda has been to improve the position of smallholder farmers in an agricultural system dominated by commercial players and WTO-imposed agreements. At the grassroots level, interventions through the FFS and participatory plant breeding have encouraged solidarity between farmers groups.

However, the evaluation team observes that the establishment of farmers' credit cooperatives have not led to observable market linkages. Although farmers interviewed have said that organic products are more lucrative, cooperative members also noted that they required more assistance in creating market access. There is still a dependency on middle men in this respect. With regards to improving farmers' capacities, the cooperative is more of an extension of the FFS and existing farmer groups. Of note is that the establishment of community business units, which was one of the Hivos deliverable, was not achieved. With regards to the formal registration of farmers' seeds, other than achieving recognizable success at the policy level, it remains unclear how many varieties of rice were registered with the government. At the community level registration systems were to a large extent already in place prior to Hivos' support. Overall however, the changes achieved since the baseline are relevant to the ToC.

### 5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

FIELD's results have been relevant both to the local context as well as to policy influencing agendas of FIELD and its network. Indramayu has historically been one of the primary rice producing districts in the country[54]. The price of rice is controlled by the government and often does not reflect its economic value. Imported rice is cheaper than rice produced in the country.

The district and FIELD's target groups are still coming to terms with the long-term impacts of the Green Revolution. The negative consequences of the Green Revolution include a dependency on agricultural companies for inputs, a loss of local knowledge on plant breeding, loss of agro-biodiversity with the introduction of commercial seeds, and vulnerability to pests and diseases.

Box 2: Coping with the impacts of the Green Revolution

"Before the Green Revolution we were the selectors of local seeds. During the Green Revolution we have been the buyers and planters of government seeds. Now, we want to be plant breeders, producing our own ideal seeds." (Quote by a member of a farmers group in Indramayu where participatory plant breeding has been introduced by FIELD and PEDIGREA starting the mid-2000s)

Source: 'Becoming Plant Breeders, Rediscovering Local Varieties: The Creativity of Farmers in Indramayu, Indonesia' by Yunita T. Winarto & Imam Ardhianto. 2007

FIELD's interventions to organise farmers have certainly been relevant to the context. Farmers are taking more pride in their work and are sharing techniques and knowledge with one another. The FFS has introduced alternatives to commercialized seeds and lessened the dependency on agricultural inputs that have to be purchased.

With regards to the policy environment, FIELD has chosen to focus on advocating for revisions of existing policies that are unfavourable to the economic conditions of smallholder farmers who dominate the sector. Given that agriculture remains the second largest contributor to the country's GDP and the depletion of agricultural productivity, these lobby efforts remain very relevant to the socio-political context.

### 5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

The interventions of FIELD fall under the Green Entrepreneurship programme of Hivos. This programme area, Hivos' largest globally, focuses on "enterprising men and women as catalysts for green socio-economic progress"[55]. Under this programme focus, Hivos supports small producers to improve their productivity (not at the expense of biodiversity) and strengthening their representative organisations.

The relevance of FIELD for Hivos' previous country policy were high since the SPO promoted organic farming which was considered a priority issue[56]. In Hivos' 2008 Vision Paper on Civil Society Building, Hivos states that, "In the economic domain it is civil society's role to counterbalance short-term profit policies, and to struggle for long term production policies which are socially and environmentally sound."[57] In addition, Hivos aims to support social movements and community and member-based organisations.

One of the motivations for Hivos' support to FIELD under MFS-II was to improve the capacity of farmer-based organisations so that the economic position of smallholders and rural outreach would be improved[58]. FIELD also supported the development of cooperatives, which Hivos considers to be

democratically-run and controlled by its members allowing economic benefits to be distributed proportionally, whilst offering a means to sustain without a continued reliance on external donor support.[59] Hivos considered FIELD's FFS to be a means though which farmers are taught good agricultural practices and soil management, both which contribute to MDG7[60].

## 5.5 Explaining factors

### 5.5.1 Internal factors

FIELD-sponsored farmers' training and learning through the FFS is one of key factors that contributed to the achievement of both outcomes. Through the FFS networks that have been built over the years, FIELD was able to mobilise farmers for both technical assistance and advocacy work. FIELD has facilitated many groups to learn from each other using the FFS method. FFS is one of the methods used to develop farmers' cultivation capacity as well as indirectly bringing farmers together for advocacy purposes.

The adoption of the FFS approach is attributable to the PEDIGREA Programme, in which it was central and placed an emphasis on community development and empowerment. Established in 2002, PEDIGREA systematically applied farmer-led approaches that allowed farmers to decide their own objectives.[61] This predecessor programme, like the Hivos-funded project was implemented in Indramayu.

### 5.5.2 External factors

Two external factors contributed to the achievement of the outcomes are an existing enabling environment for cooperative development and support from other CSOs through the coalition for food sovereignty (KRKP) and the Koalisi Kedaulatan Petani Pemulia Tanaman Indonesia. These coalitions consist of longstanding NGOs that have worked on food and farmers' issues for more than a decade. These organisations include ADS, API, Bina Desa, BITRA Indonesia, Elsppat, FIELD, Gita Pertiwi, KEHATI, Lesman, LPPSLH, Mitra Tani and SPPQT[62].

The government has an incentive scheme for farmers to establish cooperatives such as micro-credit cooperatives[63]. In every district, there is a dedicated office or department for cooperatives with a main task of strengthening cooperatives as one of the pillars of the national economic system.

### 5.5.3 Relations CFA-SPO

In addition to direct support provided to FIELD, indirect support was provided by Hivos to a FIELD-affiliated organisation. Hivos provided € 67,678 to a KRKP project called 'Increased Food Security through Pro-poor Food Policy and Community-based Enterprise Development' managed over the 2011-2014 period[64]. As mentioned previously, KRKP and FIELD collaborated on policy advocacy efforts in 2012-2013.

FIELD also received support from Hivos and Oxfam Novib through the Biodiversity Fund. The Fund, established in 2000, supported organisations to revive and expand sustainable production and sought to protect the interests of farmers, amongst others[65]. FIELD was able to develop a number of

publications with this support, including a case study on women's roles and contribution to livestock production management in Indramayu[66] and a document on farmer breeders in 2009.

Hivos has also facilitated a linkage between FIELD and other organisations through Agri-ProFocus Indonesia, an open network that promotes farmer entrepreneurship and business linkages. Because Agri-Profocus was established in 2013, just when support to FIELD was ending, it is difficult to say how FIELD benefitted from this wider network.

FIELD also met some difficulties in improving the organisational capacity of the cooperatives they established. This is evident from the targeted membership not having been reached (only around 30% achieved according to submitted reports). Hivos assigned a consultant to assist FIELD in this area. But up until 2013, according to the reports submitted to Hivos, the number of members had not increased. The figures collected by the evaluation team do however suggest an increase in membership over time. Jati Asih membership almost tripled (188.6 percent increase) from 2011 to 2014, while Karya Peduli Tani's membership increased by 54.8 percent over the same period. It likely that because there was no other external support to the cooperatives, this change can be attributed to the FIELD's investment.

# 6 Discussion

## 6.1 Design of the intervention

The design of FIELD's interventions had three main components. The first focused on the learning and empowerment processes of creating and sharing knowledge through the FFS. The second component of FIELD's design focused on legalizing farmers' seeds both formally and informally. Finally, FIELD intended to contribute to economic development by setting up cooperatives and businesses, which would be linked to plant breeding. The cooperative model was considered as an institutional tool to garner participation in the rural economy.

The first component, the FFS approach, which originated in Indonesia, has been widely recognized an inclusive approach that is central to interventions relating to participatory plant breeding (PPB). FFS promotes self-reliance and decision-making[67]. As the approach is based on experimental learning and adult education principles[68], farmers are able to easily understand the application of new cultivation techniques. However, studies have also shown that FFS is less suitable for profit-driven approaches to rural development that includes credit cooperatives[69]. While these sort of interventions can be considered to be complementary, a boost in production through FFS does not always lead to market access since there are numerous external factors that may inhibit farmers' participation in and access to markets. "The road to collective marketing of produce is long and FFS interventions need to build on strong organizational and management skills along with technical skills".[70] Within the intervention design of FIELD the linkages between cooperative development, market access and learning through the FFS is rather vague. The evaluation team found that the cooperatives acted more as an extension of the FFS rather than a means to develop businesses and markets for produce and seeds. The intervention logic did not specify whether FIELD intended to use PPB as a vehicle to compete with the commercial seed sector or whether the project intended for organic, farmer varieties of produce to be marketed. Whatever the case, there did not seem to be sufficient resources or inputs going into addressing product quality, transportation, or creating ways to inform farmers of markets.

Studies have shown that reducing poverty through the cooperative model hinges on inclusion and effectiveness, and that long-term impacts of membership on poverty reduction are rarely monitored or analysed[71]. The evaluation team found that cooperative membership was inclusive to both men and women (more than 40 percent of cooperative members were female). However, in one of the two cooperatives visited, there was no open leadership and participation of members seemed limited.

FIELD's strategy to legalize farmers' seeds took into account the possibility of formal recognition not being achieved. The community seed registry is a good approach to ensure that knowledge and local varieties are retained at the community level. Rather than trying to fit PBB into the highly regulated systems, FIELD devised a system for seed breeders to continue their practice at the local level. Formal certification of farmers' seeds before the Constitutional Court's decision in mid-2013 to revise Law No.12/1992 was seemingly a long and arduous process that required recognition from local authorities. Up until 2014, it is unclear whether FIELD has successfully helped farmers to navigate the bureaucratic procedures and how many varieties are officially legalized. Nonetheless, there are more opportunities now for the recognition of farmers' rights. FIELD's strategy to mobilize farmers into

[67] Almekinders, Conny and Hardon, Jaap (eds). 2006. *Bringing Farmers Back Into Breeding: Experiences with Participatory Plant Breeding and Challenges for Institutionalisation*. Agromisa Special 5. Wageningen: Agromisa Foundation, p. 23

[69] Ibid

[70] Ibid, page 24

[71] Ibid

action, whilst supporting a national coalition to lobby for revisions has proven to be successful in the case of Law No.12/1992. Nonetheless, more laws will require revision and continued lobby by national-level coalitions.

Essential ingredients for replication of similar interventions as well as sustained success are summarized below:

1. Continue to collaborate with national coalitions to lobby for revisions of Law No. 18/2012 on Food, Law No. 19/2013 on Protection and Empowerment of Farmers. Opportunities may arise under the new administration. Continue to engage farmers' groups in lobby activities by facilitating them to prepare testimonies and evidence required for judicial reviews;
2. The work of FIELD is sometimes highly technical, especially pertaining to seed breeding. FIELD should consider developing new publications that are properly packaged and geared towards informing policy makers of the importance of supporting farmers' seed production;
3. Work on improving market access for farmers. This may require looking beyond the current demands and preferences of local farmers to market preferences. Access to informal markets can also be supported through seed exchanges and barter between farmers (which can also contribute to farmers' welfare);
4. Invest more resources to capacitate farmers with marketing skills. Farmers are currently still dependent on middlemen for the marketing of their products. Work with farmers (and perhaps also middlemen) to create linkages to premium, organic markets. Carefully consider market demand and sufficiency of supplies;
5. Explore opportunities to support the continuous experimentation with seed varieties, which is important to reducing the risk of crop failure given changing environmental and climatic conditions. Link farmers with universities and research institutes so they can share their knowledge and genuinely participate in dialogues on new technologies and cultivation practise;
6. Monitor how collective actions through the cooperative model are leading to economic benefits; and,
7. Ensure democratic principles are held up by the cooperatives.

# 7 Conclusion

In the 2012-2014 period, the first key change found was improved organisation of FIELD's target groups in Indramayu through the establishment of cooperatives. These cooperatives, together with pre-existing farmers groups and Farmers' Field Schools, are playing a role in organising marginalized farmers so they are less dependent on seed companies and loan sharks who monopolize seeds and agricultural inputs. This change is relevant to the context, FIELD's ultimate goal, and Hivos' strategies for the country. Farmers in Indramayu are becoming more self-reliant and are able to grow rice organically through techniques that have been taught through the FFS. The cooperatives are functioning to organize seed distribution and provide credit to farmers to support agricultural production.

The second change since the baseline has been the lobby and advocacy efforts that have demanded for a judicial review of the Law on Crop Cultivation System. This 1992 Law had been prohibiting farmers from undertaking plant breeding and had often led to the criminalization of farmers accused of stealing patented seeds. Efforts to lobby for a revision of the Law began in 2010, and were stepped up in 2012. FIELD successfully worked with a coalition of NGOs to advocate for a greater recognition of farmers rights within the regulated cultivation system. The policy change means that farmers are in a better position to undertake seed breeding activities more freely and without fear of criminalization.

Both outcomes are important for farmers to gain greater sovereignty following decades of top-down agricultural policies which have imposed commercial seeds and agricultural intensification practices that had detrimental effects on the agri-ecosystem and farmers' resilience. These changes are attributable to MFS II support, but would not have been possible without pre-existing interventions carried out by FIELD in Indramayu since the mid-2000s.

While farmers are becoming more self-reliant, further support is needed to establish stronger market linkages which would allow smallholders to expand seed sales and organic rice commodities. This would give further economic benefits to farmers. The cooperatives established through Hivos' support could play an important role in this regard. In the area of policy influencing, there is still more work to be done as other Laws still create unfavourable conditions for smallholders and tend to support commercial and business interests. FIELD should continue to work in collaboration with other NGOs and farmers to lobby for regulatory revisions at the national level.

Table 11
*Summary of findings.*

| When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements? | Score |
|---|---|
| The CS interventions were well designed | 6 |
| The CS interventions were implemented as designed | 5 |
| The CS interventions reached their objectives | 7 |
| The observed outcomes are attributable to the CS interventions | 7 |
| The observed CS outcomes are relevant to the beneficiaries of the SPO | 8 |

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

# Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration
- 1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

| Dimension | | Indicators | Question | Change |
|---|---|---|---|---|
| **Civic engagement** | 1 | Needs of marginalised groups | How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies? | +1 |
| | 2 | Involvement of target groups | What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities? | 0 |
| | 3 | Political engagement | How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups? | +1 |
| | | | | |
| **Level of organisation** | 5 | Relations with other organisations | In the past 12 months what has been the most intensive interaction you had with other CSOs? | +1 |
| | 5 | Frequency of dialogue with closest CSO | In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with? | +1 |
| | 6 | Defending the interests of marginalised groups | Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs? | +2 |
| | 7 | Composition current financial resource base | How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking? | 0 |
| | | | | |
| **Practice of Values** | 8 | Downward accountability | To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them? | 0 |
| | 9 | Composition of social organs | What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for? | 0 |
| | 10 | External financial auditing | How regularly is your organisation audited externally? | 0 |
| | | | | |
| **Perception of impact** | 11 | Client satisfaction | What are the most important concerns of your target groups? How do your services take into account those important concerns? | +1 |
| | 12 | Civil society impact | In the past 12 months, what impact did you have on building a strong civil society? | +1 |
| | 13 | Relation with public sector organisations. | In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives? | +1 |
| | 14 | Relation with private sector organisations | In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective? | 0 |
| | 15 | Influence upon public policies, rules, regulations | How successful have you been in influencing public policies and practices in the past 2 years? | +1 |
| | 16 | Influence upon private sector agencies' policies, | How successful have you been in influencing private sector policies and practices in the past 2 years? | 0 |

| | | | | |
|---|---|---|---|---|
| | | rules, regulations. | | |
| | | | | |
| CS context | 17 | Coping strategies | In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society. | 0 |

# Appendix 2 Changes in civil society indicators between 2012 and 2014

## 1. Civic Engagement

### 1.1. Needs of marginalised groups SPO

The FIELD program supported by Hivos in the 2011-2013 period targeted five sub-districts in Indramayu, West Java[72]. FIELD applied the Farmer Field School (FFS) approach, which it is known for in Indonesia. Farmers and farmer groups were facilitated to learn from each other and develop capacities for cultivation, as well as benefitting from communal learning. This communal learning was carried out within one planting season. In this activity, farmers were invited to identify how agro-ecosystems work until eventually they were capable of producing seedlings for their own needs. Knowledge about plant breeding is actually a science passed down from one generation to another among the farmers. But due to the monopolization of seedlings and fertilizers by large industries since the Green Revolution, farmers have lost this knowledge and become marginalized in their dependence on large companies for agricultural inputs. Prior to the Green Revolution, farmers were capable of producing their own seedlings, fertilizers, and medicines. The Hivos-funded project continued to support FIELD's longer-term efforts to revive plant breeding. Specifically, FIELD facilitated seedling registration and accompanied farmers in the steps towards gaining recognition for varieties produced by farmers. In addition, FIELD and its intermediary farmer groups joined other CS actors to lobby for an amendment of a Law considered to be disadvantageous to farmers.

Participants of the FFS were not limited to cooperative members. Farmers outside the FFS coverage area also benefited from learning exchanges on organic farming. It is unfortunate that the evaluation team was unable to obtain figures on the number of farmers trained or assisted through the FFS from the reports available and from the field visit as these records seem to be unavailable. However, the number of cooperative members can be considered an adequate indicator of how many more people have been reached since the baseline.

Eight farmer's groups were provided support in the 2011 – 2013 project period and six cooperatives were established for these farmer groups to further strengthen their economic position. Cooperatives have been set up to help farmers gain a better position vis-à-vis middlemen and loan sharks, and to be less dependent on agricultural practices that are favoured by large companies. The data FIELD provided on cooperative membership in their reports to Hivos was found to be inaccurate. As illustrated in the table below, annual reports suggested no change in membership, but this in fact has not been the case. No sex-disaggregated data was reported in any of the years.

Table 12

*Cooperative membership reported in 2011, 2012 & 2013*

| Name of village | Name of cooperative | Membership reported in 2011 | Membership reported in 2012 | Membership reported in 2013 |
|---|---|---|---|---|
| Wanguk | Jati Asih (called Sumber Sriasih in reports to Hivos) | 31 | 31 | 31 |
| Jengkok | Karya Peduli Tani | 30 | 30 | 30 |
| Silyeg | Warga Mulya | 33 | 33 | 33 |
| Tenajar | Tunas Batajar | 20 | 22 | 22 |
| Kedokan Bunder | Sri Tirta | 15 | 15 | 15 |
| Kalensari | Ruwart Remaja | 30 | 30 | 30 |
| | Subtotal | 159 | 161 | 161 |

[72] "Meeting Report FIELD-Jakarta April 20121515", FIELD Indonesia

Source: FIELD reports to Hivos

The evaluation team visited two of the six cooperatives, namely Jati Asih Cooperative in Wanguk Village and Karya Peduli Tani Cooperative in Jengkok Village. During the visit, the team found an increase in the number members. Sumber Asih Cooperative had recruited 101 members in 2014 whereas in 2011, it only had 35 members. Karya Peduli Tani Cooperative, now has 65 members, where as in 2011 it had 42. The membership increase of the two cooperatives is illustrated in the table below.

Table 13

*Cooperative membership 2011-2014*

| Name of cooperative | # of members in 2011 | | | # of members in 2014 | | |
|---|---|---|---|---|---|---|
| | Male | Female | Subtotal | Male | Female | Subtotal |
| Jati Asih | 25 | 10 | 35 | 60 | 41 | 101 |
| Karya Peduli Tani | 21 | 21 | 42 | 32 | 33 | 65 |
| TOTAL | 46 | 31 (40.26%) | 77 | 92 | 74 (44.58%) | 166 |

Source: End line Evaluation interviews and data collection

The evaluation team was also able to obtain data on the composition of the membership, based on sex and land ownership. As illustrated in the tables, women's percentual membership has increased slightly and is well above the project's target of 30 percent. In fact, the Karya Peduli Tani cooperative has equal female and male membership. Despite these figures, there is no evidence of specific interventions targeted for female farmers.

Table 14

*Landownership of members*

| Name of cooperative | # of land owners | percentage | # of landless | percentage |
|---|---|---|---|---|
| Jati Asih | 11 | 10.89% | 90 | 89.11% |
| Karya Peduli Tani | 33 | 50.77% | 32 | 49.23% |

Source: End line Evaluation interviews and data collection

With regards to the landownership of cooperative members, a large majority of Jati Asih are landless farmers, while in Karya Peduli Tani landless farmers make up just under 50 percent of the members. This shows that cooperatives are open to both landless and land-owning members. The percentages may vary depending on local conditions, but overall FIELD has continued to target small-sized farmers. Even those who own land, generally do not own more than 2 hectares.

Table 15

*Cooperative assets 2011-2014*

| Name of cooperative | Value of assets in 2011 | Value of assets in 2014 | Difference |
|---|---|---|---|
| Jati Asih | IDR 1,500,000 | IDR 300,000,000 | + 298,500,000 |
| Karya Peduli Tani | IDR 1,100,000 | IDR 60,000,000 | + 58,900,000 |
| TOTAL | IDR 2,600,000 | IDR 360,000,000 | +357,400,000 |

Source: End line Evaluation interviews and data collection

Given the above information, the evaluation team concludes that there has been an improvement with regards to the number of people who have been reached by FIELD since the 2012 baseline, and that these target groups represent marginalized groups (female farmers and landless farmers).

## 1.2. Involvement of target groups SPO

Cooperative members and farmers groups have the opportunity to participate in decision making. This has not changed since the baseline. The evaluation team found that farmers were able to decide for themselves what kind of cooperative they needed and how it would be managed. In a Focus Group Discussion held during the field visit of the evaluation team, one of the participants stated that:

> "When we wished to form a cooperative, the facilitator asked us what kind of cooperative we needed. We were confused since what we needed was a cooperative that could serve like a bank. Therefore, we asked for assistance. The facilitator then gave us some explanations, and

we finally said that we wanted a bank-like cooperative. He suggested a credit union cooperative because it would not require a lot of space. A consumer's cooperative on the other hand, would demand a storage building. In a credit union we would only deal with money. And that's how we agreed upon establishing a credit union cooperative"[73] .

The cooperative members, many of them 'graduates' from the farmer field schools, have been well-exposed to expressing and sharing their ideas and opinions. The FFS promotes 'learning by doing' and experimentation by farmers to find the right breeding and planting techniques. As such, it promotes farmer ownership of results and successes.

The evaluation team did however find that despite FIELD's promotion of grassroots decision-making, there are some elitist symptoms in one of the cooperatives. This seems to have emerged as a result of unbalanced roles of the members. One individual seemed to have too many roles, while in the other cooperative these roles were more equally distributed between staff and members. Members of this second cooperative were more self-confident and optimistic.

As illustrated under Indicator 1.1, women make up a good part of cooperative membership. While FIELD has not done very well in reporting on the level of participation of women farmers, the evaluation team has found evidence of women's participation. Aside from the cooperative structure, the FFS approach has also been found by other external actors, in this case USAID, to be an effective approach that has a "positive impact on women's self-esteem, strengthening her knowledge and capacity to use new farming practices and technologies right along-side men", in turn resulting in more equal gender positions[74]. The same USAID review, found that FIELD beneficiaries were provided with options to select interventions to improve their lives[75].

### 1.3. Intensity of political engagement SPO

During the baseline, FIELD's work was found to be non-political. The end line evaluation found that the intensity of political engagement increased since the baseline. FIELD successfully facilitated meetings between farmers and the government, particularly the Department of Agriculture. This led to cooperative members under FIELD's support to be assigned to provide training to another farmers' cooperative in West Java.

More significantly, FIELD, together with some of its farmer groups, collaborated with non-governmental organizations to lobby for a judicial review of a regulation that was considered to be greatly disadvantageous to farmers involved in their own plant breeding. This is clearly an improvement from merely facilitating farmers to navigate through the bureaucratic process of gaining recognition for their seed varieties to engaging politically with national-level CSOs and government actors.

## 2. Level of Organisation

### 2.1. Relations with other organisations SPO

FIELD's collaboration with other CS actors and non-governmental organizations in its network intensified since the baseline. These interactions focused on advocating on the amendment of 1992 Plant Cultivation System Law through coalitions and consortiums. The organisations with whom FIELD networked were as follows: the Indonesian Human Rights Committee for Social Justice (IHCS), Indonesian Farmer Alliance (API), Bina Desa Sadawijaya Foundation, People's Coalition for Food Sovereignty (KRKP), Indonesian Farmers Integrated Pest Control Organization (IPPHTI), Palm Oil Farmers Union (SPKS), Sawit Watch, Indonesian Farmer Union (SPI), and the Alliance of Agricultural

[75] Ibid, Page 23

Reform Movement (AGRA). Following the ruling in favour of the coalition's calls for the Law's amendment, FIELD continued to socialize the regulatory change to the organisations in its network.

In the 2012-2013 period, FIELD further worked with another 11 NGOs to lobby for a judicial review of Law No. 18/2012 on Food. The following organisations submitted a request to the Constitutional Court in November 2013, which was later rejected: IHCS, API, SPI, Konsorsium Pembaruan Agraria (KPA), Solidaritas Perempuan (SP), KRKP, Sawit Watch, FIELD, WALHI, Indonesia for Global Justice (IGJ), Koalisi Rakyat untuk Keadilan Perikanan (KIARA) and Bina Desa.

In supporting the development of the cooperatives, FIELD cooperated with the West Java Puskopdit to provide trainings for new cooperatives formed by farmers. The collaboration between Puskopdit and these cooperatives did not seize after FIELD's direct collaboration with Puskopdit. This means that FIELD successfully established long-term linkages between farmers' cooperatives and Pudkopdit.

At international level, FIELD took part in international and regional networks to lobby against World Trade Organization (WTO) policies. In the lead up to the WTO Ministerial Conference in Bali in 2013, FIELD joined other global CSOs to issue letters to the G33 (a group of developing countries, Indonesia amongst them, that coordinates on trade and economic issues) calling for the imbalance in global agricultural subsidies to be addressed and for greater support to guaranteeing smallholder livelihoods and food consumption[76]. FIELD also joined other civil society groups to protest WTO discussions on "REDD Rice", a proposal to offset carbon emissions by promoting so called 'farming carbon'[77]. A No REDD Rice Manifesto was signed by FIELD and 74 other organisations to defend rice from "the clutches of carbon traders and the WTO"[78]. Following the WTO Bali meeting in December 2013, further letters were issued by a group of some 118 organisations to express concern on the G33 proposal on food security and trade agreements[79].

In addition, the success of FIELD's farmers in Indramayu has attracted the interest of other farmer groups from Cirata and Pasundan who have come to learn plant breeding. Farmer groups from these areas exchanged knowledge and practices on plant breeding techniques. The collaboration successfully led to the establishment of a FFS in Cirata and Pasundan, facilitated by farmers from Indramayu.

These are illustrations that suggest an improvement in terms of the relations with other CSOs and NGOs since the 2012 baseline. Networking amongst farmers has led to a mobilisation of information and knowledge to identify problems and solutions in cultivation and plant breeding. At the national level, networking has resulted in successful policy advocacy. Internationally, FIELD joined a host of other CSOs to protest against WTO plans and agreements.

## 2.2. Frequency of dialogue with closest civil society organisation SPO

FIELD's relation with other CSOs has improved since 2012, when the SPO began to actively participate in the coalition set up to lobby for a judicial review of Law No. 12 of 1992. These efforts cumulated in a victory, when the constitution court ruled three articles to be unconstitutional. The ruling meant that farmers were allowed to collect, produce and distribute local seeds without government permission. Farmers groups supported by FIELD also joined the lobby efforts.

## 2.3. Defending the interests of marginalised groups SPO

As reported in the baseline, FIELD is viewed as a credible organisation that assists farmers to improve their cultivation practices and navigate the bureaucratic steps required to test and certify seeds. The

FFS introduced by FIELD has invited farmers in Indramayu to re-identify agro-ecosystems and find a way to improve agricultural management. The focus of FIELD under the Hivos-supported project was on plant breeding and allowing farmers to produce seedlings independently, a skill suppressed since the New Order. Through the farmer field schools, farmers have regained these skills, as well as skills to produce their own fertilizer and plant-based medicines. This is contributing to greater self-reliance and is a stepping stone to regaining confidence and pride as farmers, as well as recognition by other stakeholders. In 2012, one of FIELD's long-term beneficiaries, Joharipin, earned recognition through a Danamon Award for Farmer Empowerment. He was credited for his efforts to conserve seed varieties, which in turn led to an increased production of four tonnes of rice per hectare to 7-10 tonnes.[80] Farmers are also selling these seeds locally for additional income.

As explained under other indicators, FIELD, together with a coalition of other NGOs and CSOs (including farmers groups themselves) lobbied for the amendment of the Cultivation Law. FIELD together with IHCS facilitated the collection of farmer testimonies from the village of Jengkok and farmers were allowed to testify as witnesses in court to make their case. The resulting constitutional court review has provided the foundation for better protection of farmers' basic rights. In the past farmers were imprisoned because seed companies accused farmers of stealing parent seeds patented by large corporations. With the amended law, farmers' interests are better protected against the interests of commercial companies and businesses. Farmers can now produce their own breeds with less fear of being criminalized. They also have the ability to be less dependent on commercialized seeds that require more agricultural inputs and are more susceptible to pests and diseases.

In addition, the establishment of credit union cooperatives have decreased the farmers' dependency on loan sharks. Cooperatives are also helping farmers with no, or little land, to gain access to loans needed as capital to rent production land.

### 2.4 Composition financial resource base SPO

The baseline report mentions that FIELD was supported by various donors who funding different projects in different locations. For example, USAID funded a project in West Sumatra, while Unilever funds were used to carry out a project in East Java and later Pangandaran, West Java. The continuation of FIELD's support to farmer groups in Indramayu was funded by Hivos.

The evaluation team has not found evidence of diversified funding resources. Donors that presently continue to support FIELD are USAID, Unilever and FAO. With USAID support, FIELD has begun to work with rural communities in several provinces to carry out vulnerability assessments in order to develop and implement strategic action plans for climate change adaptation[81]. While the number of donors is decreasing, there is insufficient data regarding the amount of money currently managed by FIELD.

## 3. Practice of Values

### 3.1. Downward accountability SPO

FIELD, through the cooperatives has applied transparency principles well. Cooperative members are informed of the financial conditions and have the right to inquire with the cooperative on these issues or to express their ideas in the general assembly. However, comparing the two cooperatives visited, the evaluation found that the leadership model applied in each cooperative has influenced the downward accountability. The Jati Asih cooperative applies an open leadership style, which allows the

[80] Hadi Suprapto and Nina Rahayu, "Joharipin, Petani Sukses dari Bibit Lokal", *VIVAnews*, 18 July 2012. Available from http://bisnis.news.viva.co.id/news/read/336489-petani-yang-sukses-dari-bibit-lokal (accessed 28 December 2014)

[81] Indonesia Forest and Climate Support (IFACS), Who we work with, "Farmers' Initiatives for Ecological Livelihoods and Democracy (FIELD)". Available from http://www.ifacs.or.id/who-we-work-with/farmers-initiatives-for-ecological-livelihoods-and-democracy-field/ (accessed 28 December 2014)

members to participate actively in discussions. The Karya Peduli Tani cooperative's leadership seems to allow less room and opportunity for its members to express their opinions.

For FIELD itself, one of the board members explained that there has been less downward accountability recently due to gaps in organisational awareness amongst FIELD staff. Overall however, FIELD maintains the same internal control mechanisms between the board of directors, advisors, supervisors and the executive. This is according to the laws that regulate foundations.

### 3.2 Composition of social organs SPO

As stated in the baseline report, there are no farmer representatives in FIELD's board. However, farmers do get a chance to participate in determining FIELD's vision, mission and policies through their representatives in IPPHTI, who are present in each annual meeting.

### 3.3. External financial auditing SPO

FIELD's financial accountability mechanism is already well managed. Every year external audits are conducted, however the audit is still project-based and not institutionally based. There is no change in this indicator since the baseline. Financial reports are not made public.

## 4. Perception of Impact

### 4.1. Client satisfaction SPO

The two visited cooperatives both expressed that they were very satisfied with FIELD's program. From their perspective, they have benefitted from the knowledge gained from FIELD through the FFS. Other benefits they mentioned were the assistance received to establish the cooperatives and increased incomes from applying organic farming techniques taught to them by FIELD. In addition, they mentioned that they had a better network and were less dependent on middle men for cash or loans. However, they expressed that there is still a need for FIELD's assistance to find suitable markets for their agricultural produce. They are unable to access end-users or buyers of their products themselves and still rely on middle men in this regard.

### 4.2. Civil society impact SPO

Before FIELD's intervention, farmers were marginalized by public sector regulations which created a dependency on commercial input suppliers. After the implementation of the project, farmers have gained more authority and a say in their production resources and tools. This achievement is considered to be a part of 'farming democratization' according to the head of FIELD's FFS.

Another achievement in the area of civil society, according to the vice chairman of Jati Asih cooperative, is a revived interest in farming. Before the project was implemented, youth were not interested at all in becoming farmers as it was considered to be a low-paying job for the poorest in the community. Many community members in the Indramayu area became (construction) labourers as a result. Since FIELD's interventions, farmers have gained pride in their work. The vice chairman himself said that he now more confident and proud to be a farmer.

The relation between farmers and middlemen has also changed as the result of FIELD's intervention. Farmers have become less dependent on middlemen for production input and capital. But according to the chairman of Jati Asih, farmers still depend on middlemen to market and sell their product. Farmers hope that future interventions by FIELD will assist them to address this issue.

As mentioned under other indicators, FIELD has also created room for 'activism' amongst farmers. Farmer groups were directly engaged to discuss the revisions required in the Cultivation Law and participated in petitioning for the Constitutional Court review. Other examples of FIELD's contribution to strengthening civil society are evident in the SPO's efforts to organise smallholders. In March 2013, a local Farmers and Fishers Forum of Indramayu (Forum Petani dan Nelayan Indramayu or FOR PANEN) was set up. This Forum has since collaborated with IHCS to disseminate information to

smallholders about their rights and has sought to protect, conserve and document local knowledge especially pertaining to seed varieties.

## 4.3. Relation with public sector organisations SPO

During the baseline evaluation, it was found that FIELD had strategic relations with the government, but that this had not led to policy change. The end line evaluation has found that together with its partners, FIELD has been successful in pushing for the revision of the Law on Cultivation Systems.

At the local level, through USAID-IFACS support, FIELD has also begun to engage more with the local government. Government officials have been invited to FFS to receive training and efforts have been made to improve relations between farmers and the local government[82]. In Indramayu, FIELD engaged the Agency for Agricultural Research and Development (*Badan Penelitian dan Pengembangan Pertanian* or Balitbang) to support multi-location trials for plan breeding. In 2013, Balitbang provided some parallel funding for the trials (IDR 20 million per 1,500 square meters)[83].

The cooperatives have closer relations with the government. In one of the villages visited, village government staff had become cooperative members. The village government was even interested in making the cooperative a part of the village government's financial arm with the chance of receiving funds from the village. The cooperative decided to reject the offer because they did not want to be co-opted or influenced by the village administration in their daily affairs. The local village government has responded positively to the development of the cooperative and FIELD's presence and assistance. However, other than being supportive, the evaluation team did not find any meaningful improvements with regards to more strategic collaboration between farmers' groups/cooperatives and the government.

## 4.4. Relation with private sector agencies SPO

This indicator is of less relevance to FIELD since the SPO does not engage directly with private sector actors. Rather, FIELD's advocacy is targeted to reduce farmers' dependency on private sector produced seeds and agricultural inputs. In this sense, FIELD has successfully contributed in decreasing dependency on mass produced seedlings and fertilizers.

As mentioned before, FIELD does collaborate with the private sector for funding through corporate social responsibility (CSR) programs. Unilever has supported FIELD in providing assistance to farmers to improve the processing of raw materials for food, as well as to support the production of soybeans[84].

## 4.5. Influence upon public policies, rules, regulations SPO

One of the key achievements booked in 2012 by the consortium of CSOs lobbying for a judicial review of the Law on Cultivation, of which FIELD was a part of, was the issuance of the Constitutional Court Decree No.99/PUU-X/2012 mandating the revisions of five articles in the 1992 Law (5, 6, 9, 12 & 60). With this revision, the interests of smallholder farmers are better protected.

In another separate effort, FIELD and 11 other NGOs failed to influence Law 18/2012 on Food. A petition was submitted to the Constitutional Court in 2013 proposing for revisions[85]. The proposed

[82] Suara Merdeka Cetak, "USAID Latih Petani Hutan", 24 November 2014. Available from http://berita.suaramerdeka.com/smcetak/usaid-latih-petani-hutan/ (accessed 28 December 2014)

revisions, which sought to support the fulfilment of food rights, protect small businesses and individuals from criminalization, and limit genetic engineering, were rejected by the Court[86].

Other than these findings, there are no changes in this indicator even though there is an improvement in the relations between FIELD and the government.

### 4.6. Influence upon private sector agencies' policies, rules, regulations SPO

There is no change in this indicator from the 2012 baseline. The indicator is less relevant to FIELD since they seek to influence public policy to protect smallholder farmers from commercial interests that undermine farmers' position. As such, FIELD does not work to influence private sector policies and practices directly.

## 5. Civil Society context

### 5.1. Coping strategies

Since the baseline, FIELD has demonstrated its capacity to respond to the existing operational context through Hivos and non-Hivos supported interventions. At the grassroots level, FIELD continued to support the organisation of farmers in groups, cooperatives and forums to help them to deal with daily challenges faced to secure a sustainable, agricultural-based livelihood. The focus has been on making smallholder farmers more resilient and independent. However, there have been challenges. FIELD has faced difficulties in improving the organizational capacities of the cooperatives they established. This is evident from the number of cooperative members, which is lower than expected (30% of targeted membership). Hivos assigned a consultant assist in developing the management of the cooperatives. Nonetheless, the number of members did not increase as expected.

FIELD has also been well aware of the impacts of policy frameworks on small holders. For this reason, they have been actively engaged in coalitions at the national level to lobby for revisions of regulations that have a direct impact on farmers. These include Law No. 18/2012 on Food, Law No. 19/2013 on Protection and Empowerment of Farmers, and Law No.12/1992 on Cultivation System. FIELD has managed to cultivate its strong grassroots base as a means to provide inputs to proposed policy revisions that protect seed breeding and ensure farmers have a steady income.

Report CDI-15-067

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Klaver, D.C., Smith H., Nugroho K., Amir S., February 2015, *KBR end line report; MFS II country evaluations, Civil Society component,* Centre for Development Innovation, Wageningen UR (University & Research centre) and SurveyMETER. Report CDI-15-024. Wageningen.

This report describes the findings of the end line assessment of the Kantor Berita Radio 68H (KBR68H), a partner of Free Press Unlimited in Indonesia.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses how KBR68H has contributed towards strengthening civil society in Indonesia using the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered relate to changes in the five CIVICUS dimensions to which KBR68H contributed; the nature of its contribution; the relevance of the contribution made, and an identification of factors that explain KBR68H's role in civil society strengthening.

Keywords: Civil society, CIVICUS, theory-based evaluation, process-tracing

# Acknowledgements

SurveyMETER and CDI are thanking the staff and the leaders of all Southern Partner Organisations that participated in collecting information for the evaluation of the contribution of these partner organisations to creating a vibrant civil society in India. They also thank the Co-Funding Agencies and the Dutch Consortia they are a member of for making background documents available. We hope that this evaluation can support you in better positioning yourself in the Civil Society Arena of Indonesia.

# 1 Introduction

This report presents the civil society end line findings of KBR, a partner of Free Press Unlimited. It is a follow-up to the baseline assessment carried out in 2012. According to the information provided during the baseline study, KBR is working on the theme 'governance'.

These findings are part of the overall joint MFS II evaluations carried out to account for results of MFS II-funded or co-funded development interventions implemented by Dutch Co-Funding Agencies (CFAs) and/or their Southern Partner Organisations (SPO). They are also intended to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework (see Appendix 1) and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact, and context influencing agency by civil society in general) has been used to orient the evaluation methodology (see Appendix 1).

**Changes in the civil society arena of the SPO**
In the 2012 – 2014 period the most important change that took place in KBR's civil society arena is related to Civic Engagement. Between 2011 and 2013 Teen Voice expanded through televised and radio broadcasted programs. According to KBR68H's own estimated the relay of the show through 52 radio stations and 22 television stations relayed an estimated 1.17 million youth and teenagers. This number is impressive. The content was produced involving youth reporters and presenters with a focus on presenting issues through the viewpoints of teenagers. As the audience survey, covering 300 children showed, the audience was enthusiastic about the content of the shows. Children enjoyed the content and felt that it was of use in their daily lives. In the second period, Teen Voice television and radio was discontinued due to a lack of interest from potential funders. Fortunately, KBR68H had already begun to expand Teen Voice online through a portal. KBR succeeded to disseminate content through its KBR68H portal and through social media ensuring that Teen Voice continues until today. The online platform affords new opportunities for the show to engage audiences. Two-way communication has improved through Twitter and Facebook.

Throughout 2012-2014, KBR68H also expanded its networks with radio stations. The network grew from 850 to 900 radio stations in this period. KBR68H maintains a reputable position as an independent media source known for its high-quality content and has the infrastructure to broadcast in the Asia-Pacific region. For Teen Voice the network expansion did not have measurable positive consequences, rather it signifies positive trends for KBR68H as an organization. This implies that it improved it 'level of organisation' in CIVICUS terms.

These findings were obtained through an analysis of documents, a workshop with the SPO, and several interviews. These interviews were conducted with: KBR; external resources persons working in civil society organisations that receive support from KBR; other civil society organisations with whom KBR is collaborating; public or private sector agents and; external resource persons with knowledge of the MDG or theme on which KBR is concentrating.

**Contribution analysis**
Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. KBR68H was selected for a quick assessment.

The above mentioned changes can be attributed to KBR68H and partially to FPU funding during the first period. Although the televised and radio shows have been discontinued due to a lack of funds, including those from FPU, KBR68H has managed to adapt and make use of the opportunities available through the internet. KBR's intention with Teen Voice is that it remains an interactive platform that would allow for the seeds of democratic traits, such as freedom of expression and constructive dialogue, to be planted. Unfortunately the Teen Voice programme discontinued on radio and television in 2014 and its portal is neither frequently visited nor social media are being used by children to continue raising their voice. The interventions were not sustainable.

**Relevance**
Interviews with staff of KBR, with external resource person, with the liaison officer of FPU, as well as contextual information helped to assess the relevance of KBR's interventions in terms of: its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which KBR is operating; the CS policies of FPU.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant since KBR68H was able to produce quality content, target an underserved age group, and engage its network disseminate content through television and radio up until 2013.

With regards to the context in which KBR68H is operating, its interventions and outcomes achieved are relevant because media plays a critical role in shaping opinions. Online media and television are the main media outlets in the country programs like Teen Voice fill an important gap in an adult dominated space.

With regards to the CS policies of Free Press Unlimited (FPU), KBR's interventions and outcomes were relevant, but not sustainable. KBR continued to engage with the international Kids News Network, but FPU did not react to a request for a short interview on this network and KBR's role in it.

**Explaining factors**
Interviews with staff of KBR, external resource persons, as well as contextual information helped to assess the relevance of its interventions in terms of; its Theory of Change (ToC) for Civil Society (CS) as designed during the baseline study; the context in which KBR is operating; the CS policies of KBR

Internal factors that explain the findings are KBR68H's migration of the Teen Voice radio and television programs to a web portal and social media platform and the fact that it did not succeed to develop a business plan capable of financing the further mainstreaming children's programmes into ongoing activities. External factors that explain the findings are the drop of commercial television and radio interest in the continuation of Teen Voice. Factors that explain the findings that are related to the relation between FPU and KBR68H are the support FPU provided through trainings, Teen Voice's membership to the Kids News Network (KKN). FPU supports its partners by means of project packages that last 18 months. KBR was not able to find alternative sources to continue the Teen Voice programme that ended in 31 December 2012

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the governance issues KBR is working on. Chapter 3 provides background information on KBR, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Free Press Unlimited. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in Appendix 2 in the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in Chapter 4. The answers to each of the evaluation questions are being presented in Chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in Chapter 6. Conclusions are presented in Chapter 7.

# 2 Context

## 2.1 Political context

This paragraph briefly describes the context KBR68H is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

### 2.1.1 Brief historical perspective

Indonesia's rise to being the world's third largest democratic nation has been lauded by many world leaders. The county is often considered to be a model Muslim democracy. As the fourth most populous nation with an estimated 250 million people[1], Indonesia has sustained its democratic commitment since transitioning from an authoritarian leadership to a democracy in 1998. The decentralized administration now consists of 34 provinces and 508 districts and municipalities.

Prior to 1998, Indonesia was under strict authoritarian regime. Suharto, known for his so-called New Order (1966-1998) regime, ushered in radical transformations that would place social and political forces under direct state supervision. The defining characteristics of the Suharto era were a focus on economic growth and controlled consensus and political stability devoid of dissent. A series of tumultuous economic and political transitions in the nineties severely diminished the credibility of ageing President Suharto, who was forced to resign amidst mass street protests.

His departure in 1998 laid bare three decades of social inequalities, state-perpetuated abuses against human rights, and a lack of civilian liberties. The regime change opened the way for a period of *Reformasi* started under the presidency of B. J. Habibie (1998-1999) and continued by Abdurrahman Wahid (1999–2001), Megawati Soekarnoputri (2001–2004), and Susilo Bambang Yudhoyono (2004–2014). Restrictions on citizen participation, press freedom and association were removed. Democratic reforms and decentralization led to direct elections, portioned authority, devolution of authority to regional authorities, formation of new political parties and ended the military's parliamentary influence. The distinct historical periods of the New Order Regime and *Reformasi* (1998-present) have shaped the emergence of civil society. Defining characteristics are summarized in table 1.

With political reforms came greater freedom and space for civic engagement. In the *Reformasi* period, there was a remarkable increase in the number of civil society organizations, many of which were Islamic in character. In 2000, the Central Agency on Statistics (BPS) recorded around 70,000 registered organizations, compared to just 10,000 in 1996.[2] New groups sprung up with donors encouraging activists to establish NGOs they could fund. These organizations were eager to distance themselves from state and often took an anti-government stance. Proliferating CSOs and NGOs have taken advantage of decentralization and greater regional autonomy to engage in public affairs. Civil society and government relations have improved, although both sides remain sceptical of the others' intentions.

[1] In 2010 the population was estimated to be around 237 million people (BPS 2010 Population Census). The current figure is an estimate from BKKBN and similar figures are cited in the CIA's World Fact Book and the World Bank.

Available from http://intranet.law.unimelb.edu.au/staff/events/files/Microsoft%20PowerPoint%20-%20LSM%20dan%20Islam%20di%20Indonesia%20--Melbourne%202010-FINAL.pdf (accessed 25 October 2014)

Table 1

*Characteristics that have defined the emergence of civil society in Indonesia*

| Characteristics | New Order, authoritarian period (1966 – 1998) | Reformasi (1998 – present) |
|---|---|---|
| **Political system** | Centralized, authoritarian characterized by unipolarity. Golkar as the dominant political party.<br><br>In 1999 there were 27 provinces, 306 districts and around 60,000 villages. | Decentralized, democratic. Fragmentation of power and atomization of patronage relationships. Emergence of numerous political parties. Direct presidential elections since 1999.<br><br>Decentralization altered the political and administrative landscape: 34 provinces, 410 districts, 98 municipalities, 6,944 sub-districts and 81,253 villages.[3] |
| **State-citizen interaction** | Benevolent leader, obedient population. Down to the village level, the state permeated society. | Modern political culture marked by diminishing hierarchy between the state and citizens, allowing for citizens to interact more freely. |
| **Citizen representation and voice** | Strict control of speech, expression and association.<br><br>CSOs and their networks largely "hiding behind the screen", and operating under state surveillance. A period of growth occurred in 1995-98, as resistance was building. | Burgeoning of CSOs, pressure groups and NGOs following the political euphoria after Suharto's fall.<br><br>Indonesian CSOs began to establish new networks internationally. Up until the early 2000s the focus was on state-centrist issues. Later, issues that CSOs were tackling became more diverse, ranging from pluralism, poverty reduction to fulfilment of economic, social and cultural rights. |
| **Media** | No free press, censorship and state-control. Suharto had firm grasp over how to use print & broadcast medias to promote political ideologies. | More vibrant media environment, flourishing of media businesses albeit in control of 12 main conglomerates that are mostly profit-driven and often have political ties. |
| | Limited public and CS use and access to internet until mid-90s. | Twitter nation, widespread social media use. |
| | | Growing realization of the importance of media/free press as the fourth pillar of democracy. |
| **Artistic forms of expression** | Art and literary censorship conducted by the state. Art forms were a means to reinforce political order. | Greater freedom of the arts and cultural sectors. Organizations able to hold art events more freely. Freedom of expression a catchphrase amongst individuals and artistic groups, but challenged by more conservative members of society. |
| **Religious expression and organization** | Regime repressed religious groups, especially radical forms. | Emergence of religious groups seeking to restore Islamic values and defend Muslim values. |

### 2.1.2 Recent trends in the political context

Indonesia is considered to be a story of democratic success, but it still struggles to realize the benefits of sustained and equitable economic growth. In the political context, the main challenges lie in governing such geographically vast and decentralized country, applying principles of good governance and the enormous task of reforming the country's bureaucracy.

Although, Indonesia's 'big bang' decentralization initiated at the turn of the century narrowed the gap between local government and citizens, it has also localized political power struggles. While the devolution of authorities relieved tensions between the central government and the regions, it has also created opportunities for corrupt and rent-seeking practices, at the local level. As indicated by Transparency International's corruption index scores, perceived corruption in Indonesia remains high.

Table 2

*Transparency International's Global Corruption Barometer survey: Indonesia*

| Year | Corruption perceptions Index Score<br>*(0 perceived as highly corrupt and 100 perceived as clean)* | Rank |
|---|---|---|
| 2011 | 30 | 100/182 |
| 2012 | 32 | 118/174 |
| 2013 | 32 | 114/177 |

Source: Transparency International

In 2013, decentralization was taken a step further with the approval of the Village Law, intended to address weak governance arrangements and empower rural communities to participate politically. The new law could also lead to village elites distorting power relations and misusing government funding if not properly monitored.

Indonesia is still transitioning politically and many challenges lie ahead. According to the 2012 Indonesia Governance Index's Executive Report, "Indonesia is witnessing a paradox in its democracy. On one hand, a successful opening-up of civil liberty has led to the avalanche of democratic demands across the nation, however on the other hand, democratic institutions' are inadequately respond to those demands." Nonetheless, the Indonesian Governance Index, which focuses on measuring provincial governance, does show a general improvement in the performance of the government (political office) bureaucracy, civil society and economic society based on principles of participation, transparency, fairness, accountability, efficiency, and effectiveness between 2008 and 2012. Civil society scores improved the most significantly, while scores for bureaucracy rose slightly[4].

Table 3

*Indonesia Governance Index: Average provincial scores*

| Arena | 2008 | 2012 |
|---|---|---|
| Government | 4.93 | 5.46 |
| Bureaucracy | 5.53 | 5.58 |
| Civil Society | 4.85 | 6.33 |
| Economic Society | 4.77 | 5.71 |

Source: http://www.kemitraan.or.id/igi

In the past decade, Indonesians have generally enjoyed a freedom to participate in the political process through a direct-election mechanism. However, in September 2014 lawmakers voted in favour of a bill reviving indirect elections of regional heads. The controversial vote provoked public outcry which saw peaceful protests and the public voicing their discontent through social media. In early October, just before the end of his term, president Yudhoyono issued a regulation in lieu of the law, effectively repealing the law until further judicial review.

The recent 2014 elections which marked the end of Yudhoyono's 10-year term, demonstrated that Indonesian voters are increasingly voting for popular figures irrespective of political party alliances. While practices of corruption, vote-buying and poor voter administration remained in the recent election, the public seems to have matured politically, indicated by the enormous interest in televised debates between the leading candidates. The appeal of the newly sworn in President Joko Widodo, popularly known as Jokowi, has come from his hands-on, man-of-the-people approach. As Jokowi begins his five-year term he will need to start addressing a myriad of challenges that include corruption, stagnant economic growth, and human rights concerns, particularly with respect to the rights to freedom of expression, peaceful assembly, and religious intolerance. If left unaddressed, these challenges could seriously undermine Indonesia's stability and democratic reforms.

[4] The IGI uses a scale of 1 (lowest) to 10 (highest). Data is available online through their website. Indonesia Governance Index, Data, "IGI Executive Report". Available from http://www.kemitraan.or.id/igi/index.php/data/publication/factsheet/275-igi-executive-report (accessed 25 October 2014)

## 2.2 Civil Society context issues with regards to the MDG

Several important changes took place during the 2011 and 2014 period. First, the global financial crisis and Indonesia's rise to a middle-income country led to a decrease in international donor funding. Development actors, including CSOs and NGOs, have to compete harder for funding. Some have been more successful than others in diversifying funding by turning to the private sector or private foundations. At the expense of past idealism, local NGOs are now more disposed to receiving funding sources which in the past may have been criticized as supporting neoliberalism.

Regulatory changes also affected the civil society arena positively and negatively. Amongst the more controversial laws to spark reaction was Law No. 17/2013 on Societal Organisations. In an open letter sent before the bill was enacted, CIVICUS said the law would undermine freedom of association and "prevent CSOs from working on sensitive topics related to good governance and democratic reform in the public interest"[5]. FORUM-ASIA deplored the repressive provisions in the law that "leave all groups vulnerable to attacks, undermining the hard-won democratic space that has been forged by civil society since the end of the New Order regime"[6].

Other laws passed that provoked criticism were weak the State Intelligence Law (October 2011) and the Social Conflict Law (April 2012). NGOs and media see these laws as imposing further restrictions on freedom of speech, potentially leading to the criminalization of human rights defenders and signifying a tightening of state control. Discriminatory content was also an issue in discussions on the Religious Harmony Bill in 2013, for which drafting was initiated in despite not being part of the planned National Legislative Program. Late in 2013, the House of Representatives came under fire again for its stance against religious intolerance when it re-endorsed a law that limits state-recognized religions to six.

Land rights and natural resource protection have been a long-standing issue for Indonesia. While Indonesia has adopted and amended laws to improve the rights of smallholders and indigenous communities, many of these regulations have faltered in their implementation. Part of the issue lies in the overlap and lack of clarity of laws adopted that regulate different sectors and local legislation. Another issue is that there is a lack of oversight in the procedures such as granting permits and licensing. These problems, which are commonly found across development sectors, are compounded by a lack of information among local communities on what the laws regulate and their rights vis-à-vis them.

# 3 KBR and its contribution to civil society/policy changes

## 3.1 Background of KBR68H

Kantor Berita Radio 68H (KBR68H) began in 1999, as a part of *Institut Studi Arus Informasi* (ISAI)[7], in response to the closure of three vocal magazines (Tempo, Editor and Detak) by the Suharto government. During the Suharto regime, radio broadcasting suffered heavily from media restrictions, with the only source of news being the state agency. KBR68H chose radio as a medium because of its affordability and potential reach. In the transition to democracy, KBR was able to seize the opportunity to become the first radio news agency acting outside of the state.

In the same year of its establishment, KBR68H was brought under a limited company, PT. Media Lintas Inti Nusantarato to allow for greater flexibility, marketing power, and positioning within the media landscape of Indonesia. By joining the new media market, KBR has the ability to compete with private capital-driven media and has come out as the largest private radio news agency in Indonesia, producing a variety of high-quality information, based on public interest programming. PT. Media Lintas Inti Nusantara is also the parent company of Green Radio Jakarta, Pekanbaru Green Radio, Tempo TV and Portal KBR. In the end of 2013, the company further expanded its reach by signing a business partnership agreement with SmartFM[8].

Given its position within the private sector, KBR's relations with its constituents can be considered as business exchanges. These relations, however, are quite flexible. For example, community radio stations may receive KBR services free of charge, and they also receive shares of revenue from commercial advertisements. Notwithstanding, KBR68H has an explicit public service ethos. As an independent radio news agency, KBR68H is "committed to freedom of information, good quality media, and increasing information access". It considers itself "a friend for listeners during a process of democratic transition, moving towards a better future for the country"[9]. Broadcasted programs serve as a medium for public education and cover critical content, such as legal reform, regional autonomy, environment, public health, small and medium enterprises, education, religion and tolerance, and democracy. KBR believes that their constituents choose them primarily for their content quality, along with the prospect of profit. Interestingly, radio stations and government-funded information campaigns often prefer KBR68H over official government radio (RRI) because of KBR's reputation for quality content.

Starting off with 30 minutes of on-air time and seven relaying partners, KBR currently serves up to eight hours of on-air programming to 900 radio stations throughout Indonesia (100 of which are community radio stations), as well as 9 countries in Asia. KBR is supported by 50 journalists in Jakarta, 100 correspondents in numerous cities in Indonesia and 20 contributors across Asia. Aside from delivering content, KBR commits itself to raising the standards of the radio industry by providing:

1. Training for aspiring and intermediate journalists;
2. Training for radio technicians;
3. Marketing training, and;
4. Support to the development of radio stations in remote areas.

[7] ISAI itself is a member of the *Komunitas Utan Kayu* affiliation set up in 1994. The same affiliation also gave birth to *Komunitas Salihara*, who specializes in art media and *Jaringan Islam Liberal* (Liberal Islamic Network).

[9] "Company Profile", KBR68H, no date (probably from 2010)

KBR68H has received numerous national and international awards, both for journalists and institutional merits.

## 3.2 MFS II interventions related to Civil Society

In general, KBR68H's impact on civil society is the encouragement of democracy, tolerance and civic participation, through the production and distribution of high-quality information by a network of local radio stations as well as by promoting professionalism in the media world[10].

Free Press Unlimited (FPU)'s support to KBR68H specifically falls under the Teen Voice Program, which aims to deliver news to young, teenage audiences. KBR68H considers this program to be ground-breaking, as it is one of the very few of its kind to be produced by a private news agency. For KBR it is critical to provide youth with informative programming on issues such as corruption; and to provide teens with an outlet to voice their opinions. They see this as a means to enhance teenagers' confidence and prepare them to be future actors in the national reformation process. Teen Voice, implemented by KBR with € 279,403 in funding, had two main objectives:

- Provide children and teens (target age group 10-14) in Indonesia with the tools to gain a better understanding and insight into their world, and a platform to express their opinions;
- Improve the journalistic quality of children's news reporters in Indonesia.The Teen Voice intervention relates most closely to the CIVICUS dimension of 'civic engagement' sought to deliver educational and critical content *to* teenagers *by* teenagers - telling the story through their eyes. Teen Voice was expected to give opportunities to teens to express their opinions on daily issues. As such, it was intended to plant the seeds of democratic traits such as freedom of expression and constructive dialogue.

Other aspects of the program have some relevance to 'level of organisation' of KBR68H, especially the ability to cooperate, network and build productive linkages with similar actors. FPU provided opportunities for Teen Voice and KBR to network internationally through the Kids News Network (KNN). Internally, KBR relies on the quality of networking and the organisation's relation vis-à-vis the public and private sector to maintain a balance between profitability with societal idealism.

[11] Costs that relate to civil society development or policy influence are those costs that possibly contribute to the development of the CIVICUS dimensions, excluding coordination and office costs; staff costs and financial reserves.

# 4 Data collection and analytical approach

## 4.1 Adjustments made in the methodology of the evaluation

The documentation provided by Free Press Unlimited at the start of the end line assessment period was quite comprehensive. This allowed CDI to provide direction to the in-country team on what areas to focus the evaluation on following an input-output-outcome analysis. In addition, Free Press undertook an audience perception baseline and end line survey, which allowed the evaluation to focus on whether Teen Voice was successfully continued or mainstreamed in KBR68H's programming or networks.

The evaluation team in the field followed the operational guidelines to a great extent, but was unable to have a workshop with all KBR68H for an entire day. In practice, the workshop lasted half a day and was followed up with separate interviews with relevant staff. A separate meeting was scheduled to meet external parties and network organisations.

## 4.2 Difficulties encountered during data collection

Since the FPU-funded project ended in 2012, some key staff, with the exception of the director, have moved fromKBR68H. This presented challenges in assessing the extent to which KBR68H's level of organisation has changed. However, the team managed to contact some of the beneficiaries of the program who were also interviewed during the baseline.

Because of the time frame of the project and that of the end line, few changes occurred since the 2012 baseline. As a result, the in-country team focused on reconfirming the findings from the baseline and assessing the extent to which the changes had been sustained in the period since 2012. Ideally, the baseline assessment would have taken place earlier (in 2010) rather than during a period in which most of the SPO's activities were wrapping up. This would have made it easier to identify and track how changes occurred from base to end line.

## 4.3 Identification of outcomes for in-depth process tracing

This project was not selected for process tracing; however, in identifying the changes in 2012-2014 period, one outcome related on civic engagement was identified. Because KBR68H's program was very focused on increasing the exposure of teenagers and youth to news coverage, only one outcome was selected for evaluation. This outcome was selected because it represents major inputs of the program and taking into consideration the availability of evidence.

# 5 Results

## 5.1 Results obtained in relation to intervention logic

Table 5

*Overview of results achieved in relation to project plan KB68H*

| Planned results | | Level of achievement |
|---|---|---|
| Objective 1 | Provide children and teens (target age group 10-14) in Indonesia with the tools to gain a better understanding and insight into their world, and a platform to express their opinions | Overall, children have positive opinions about Teen Voice television & radio programs |
| Result 1.1 | After 18 months, at least 128 episodes of Teen Voice radio (2 new episodes/week excluding reruns) and 192 episodes of Teen Voice TV (3 new episodes/week excluding reruns) have been produced and broadcast | Achieved, 148 episodes broadcast on radio. 165 episodes of Teen Voice TV completed. |
| Result 1.2 | Children in Indonesia have a platform to freely express their opinions and to gain understanding and knowledge of their world | Achieved, episodes covered children's' and teen's issues. Teen Voice is the kids' news programme in Indonesia. |
| Objective 2 | Improve the journalistic quality of children's news reporters in Indonesia | Partially achieved, two awards for KBR68H journalists (Ikhsan Raharjo and Liza Desylanhi) on child issues from UNICEF and ILO[12]. |
| Result 2.1 | A team of 6 radio reporters and 6 TV reporters are trained and experienced in producing a high quality kids news program | Achieved, a team of 12 journalists received extensive training on how to produce quality news and information programme (for both radio and TV) aimed at children 10 to 14 years of age. |
| Result 2.2 | South-South exchange through network cooperation & item exchange with other KNN members (via the Online Exchange Server/ WKN program) | Achieved |
| Result 2.3 | The program will be financially sustainable after the project period | Not achieved, still dependent on external funding. |

While we can conclude that most of the planned activities were implemented and milestones were achieved, at the outcome level, specifically the first outcome, it is more difficult to draw an assessment on the level of achievement. There are three main sources of information that provide relevant insights, namely: 1) an audience survey commissioned by FPU, conducted by Yayasan Pengembangan Media Anak (YPMA), which generally concluded on the basis of surveys that children have positive opinions of Teen Voice television and radio program; 2) FPU's own assessments of the of KBR's reports that reported successful interventions with regards to the creation of radio and TV episodes and online platforms (website, Facebook, Twitter) but some discrepancies between planned and actual results, and 3) interviews conducted during the evaluation.

The main area where KBR fell short was in sustaining the Teen Voice program[13]. Specifically, long-term financial sustainability was not achieved despite efforts to develop a business plan of acceptable quality, which admittedly took a long time to formulate (submitted only in August 2013). This was identified as a risk from the start of the intervention, but KBR struggled to find a balance between quality programming and market or private-sector ideas of commercialisation. Fundraising and sales were not properly embedded within the organization and seemed to have lacked priority. Revenues to

[12] Liza Desylanhi's report on traumatized Ahmadiyah children in Bogor (AJI-UNICEF)and Ikhsan Raharjo on child labour (ILO)

[13] According to discussion between FPU and KBR in mid -January 2015, as a result of business split between KBR and Tempo Group as of 1 January 2015 ,Teen Voice is now under the Tempo Group with the idea, among others, to make again a TV version possible in the very near future.

continue Teen Voice were not generated because insufficient donors were found, permanent viewership was not mobilized, and off-air events did not generate sufficient visibility and awareness.

## 5.2 Changes in civil society in the 2012-2014 period

Teen Voice radio and television programs ended in December 2012, thus changes in civil society will be discussed in this section by focusing on the extent to which changes or results delivered through the project were sustained in the 2012-2014 period and how KBR has coped with current challenges.

### 5.2.1 Civic Engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

From July 2011 to December 2012, KBR was able to enhance civic engagement through Teen Voice. Teen Voice is considered by many to be unique amongst commercial media in Indonesia given that there are very few programs that serve quality fare for children. According to estimates, 81 million viewers of television in Indonesia are under the age of 18, but very few programmes cater to this age group.[14] The broadcasted shows sought to inspire children and teenagers through compelling news content so that children would have a more active interest in issues covered by Teen Voice.[15] The involvement of teenage reporters helped to tell the story from the eyes of the teenagers.

In 2012, Teen Voice expanded from radio shows to the popular mediums of television and internet platforms with support from FPU. Teen Voice was (re)broadcast on 22 local television stations as well as a subscription-based TV channel (AORA TV) and social media. At its height, some 53 radio stations relayed televised versions of Teen Voice. The number of radio stations broadcasting Teen Voice dropped from 53 to 51 in November 2012.[16] In early 2013 the frequency of broadcasting fell to once a week after FPU project funding ended. In 2013, KBR estimated that when Teen Voice was broadcast through mainstream media, some 400,000 viewers were reached and around 770,000 young people listened to Teen Voice[17].

In the last year of the project, Teen Voice discontinued relaying programs through mainstream media. KBR68H turned to the use of online media. Although fewer audiences have been reached, the internet and social media allowed for more interactive engagement. Teen Voice did improved its online presence through a fan page and Twitter account. It also began broadcasting on YouTube and moved its website to the parent channel of KBR68H (http://www.portalkbr.com/teenvoice/).

Despite its reputable programs, Teen Voice has failed to position its program within the market and has been unable to continue to produce content and maintain an audience base. As an illustration, one of its episodes available through the WKN's WaDaDa YouTube channel (http://www.youtube.com/watch?v=YCYyfYzKbjA) only received 45 views as of 16 November 2014.[18]

New possibilities to launch the TeenVoice programme again on television have been created when the programme was shifted to the Tempo Group since 2015[19].

[14] Free Press Unlimited, "Indonesia's Teen Voice: on the right track", 10 September 2012. Available from https://www.freepressunlimited.org/en/article/indonesia%E2%80%99s-teen-voice-right-track (accessed 21 November 2014)https://www.freepressunlimited.org/en/article/indonesia%E2%80%99s-teen-voice-right-track

[15] According to the proposal submitted in early 2011, this program was expected to reach around a million radio listeners and 100 thousands television viewers from various groups. Teens and also parents are expected to obtain information from this program, be it from direct listening, from the information passed on by their children or from media reporting the content of this program.

[18] 'WaDaDa' provides a selection of news items produced by members of the World Kid's Network all over the world.

[19] Information received from FPU Program Manager South Asia on 21 January 2015

With regards to its reach, Teen Voice's ability to attain a larger audience and involve more children and teenagers through its programming has diminished; fewer people have been reached since Teen Voice through radio and television was discontinued in January 2014 and continued through web-portal. However, KBR remains a reliable and active member of the Kids News Network of Free Press Unlimited.

**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.2 Level of Organisation

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

Given how Teen Voice fared in the 2012-2014 period, the SPO's relations with other CSOs working on the concerns of teenagers and youth has decreased with the discontinuation of the televised and radio-broadcasted programmes. Due to budget constraints in 2013, the number of crew members was cut back from six to three. Compared to the baseline, KBR has thus been less effective in defending the interests of teens and youths as a marginalised group in mainstream media. FPU has recognized that the main challenge of Teen Voice laid in its long-term sustainability of the project (in terms of finances and funding, business management, viewership and audience base)[20]. The business plan finalized in August 2013 seems to have been unsuccessful. From the evaluation team's perspective, working to bring teen voices into mainstream media requires considerable investment and financial sustainability within the given timeframe of Teen Voice was probably not a realistic expectation.

However, KBR itself continues to be Indonesia's leading independent radio network with 900 partner radio stations across Indonesia and in nine countries in Asia and Australia. The SPO's network has grown significantly since 2000, when it encompassed just seven radio stations, and 2000 when 600 radios were part of the network. In 2013, KBR's parent company signed a business partnership agreement with SmartFM, which could also be considered a competitor of KBR. The collaboration is seen as mutually beneficial: KBR expands its audience base in the cities of Jakarta, Medan, Palembang, Semarang, Surabaya, Manado, Makassar, Balikpapan and Banjarmasin; while SmartFM is able to air its programs through KBR's extended network. However, the Teen Voice programme has not been part of this network expansion. While there is a general consensus amongst the network of the importance of teen or youth-oriented programmes, the discontinuation of Teen Voice radio and infrequent updates of the KBR web portal mean that Teen Voice is not relayed by the network.

With its activist roots, KBR68H maintains an affiliation with AJI and the Tempo group, which includes organisations such as Komunitas Utan Kayu, Salihara and international NGOs (Hivos, The Asia Foundation, Ford Foundation amongst others). The collaboration between KBR68H and its network of radio station is a demand-and-supply oriented relationship. In 2013, KBR68H launched a successful subsidiary online news portal, PortalKBR.com in partnership with TV Tempo to further extend its reach by allowing radio partners to send and receive information more effectively. "PortalKBR.com is the result of the convergence of the radio world and the online world with a specific mission to become a news portal that provides a place for the flow of information from the regions."[21]

This recent development is also reflected in the financial resources and internal governance of KBR. A new division for creative and marketing services has been set up since the baseline demonstrating new priorities and a need to be more business savvy. Organisationally, KBR has sought out creative ways to generate revenue, favouring a mixed business model that draws revenues from advertising, sponsorships and events[22]Government ministries and agencies have contributed to revenue generation by paying for the broadcast of public service announcements about family planning, AIDS prevention, forest conservation and other issues.

[20] See report by Chermene Fisser, 28 August 2013 p.2

[21] Translated from PortalKBR.com's website: http://portalkbr.com/tentangkami.html

[22] George, Cherian, ed. 2014. *Asia Journalism Focus: Sustaining Independent Journalism*. August 26. Available from http://www.scribd.com/doc/237725106/Asia-Journalism-Focus-Sustaining-Independent-Journalism#scribd (accessed 17 November 2014)

The SPO has diversified the composition of its financial resources. According to information provided by KBR to the evaluation team, only 10 percent of the revenues now come from donor agencies, compared to 31 percent during the baseline[23]. This could also be a reflection of trend in foreign aid funding rather than the success of KBR alone. KRB has had problems with financing the continuation of several programs, not only Teen Voice. In May 2014, it was forced to take 'Asia Calling', its award-winning program off the air due to a lack of funding. Fortunately it was able to revive the program due to a new sponsor. This illustrates that KBR68H still has some way to go in making its business model a success.

**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

As during the baseline, the composition of shareholders of KBR's parent company PT. Median Lintas Inti Nusantara, remains the same, i.e. Koperasi Utan Kayu, Yayasan ISAI, other institutions and some individual shareholders. These shareholders continue to meet at least once a year to review the progress of KBR68H. As a limited company, financial audits are followed as regulated by the government. Overall, there is no change in terms of downward accountability and the public can access the company's financial information.

With KBR drawing revenue from advertising and sponsorships, the organisation has set up internal standards which forbid it to receive advertising income from tobacco companies and firms with poor environmental records as this would contradict the organisation's mission and concerns. In addition, the production teams are separate from the marketing divisions, so the latter does not influence the content of programs.[24] Despite claiming that revenue sources are carefully selected, KBR continued to work with private patrons, like Exxon Mobile, who sponsored talk shows on women's issues. Exxon Mobil has received criticism in the past for environmental performance and the collaboration would suggest that internal codes are not followed or implemented.

**Score baseline 2012 on an absolute scale from 0-3: 3**

**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perceptions of both civil society actors (internal) as well as actors outside civil society are taken into account. Specific sub-dimensions for this evaluation are the extent to which the SPO has contributed to engaging more people in social or political activities, strengthening CSOs and their networks, and has influenced public and private sector policies.

By design, KBR68H's contribution to civil society is indirect through the production of high-quality information and independent journalism in line with freedom of information. This situation did not change since the baseline. FPU's support, such as building the capacity of journalists to produce children's programs, was more relevant to KBR68H as an organisation rather than directly impacting

[23] According to the document cited in the previous paragraph, donor contributions still amount to 20 percent of KBR's revenues. In 1999 when KBR was founded it relied solely on foreign grants.

[24] George, Cherian, ed. 2014. *Asia Journalism Focus: Sustaining Independent Journalism*. August 26. Available from http://www.scribd.com/doc/237725106/Asia-Journalism-Focus-Sustaining-Independent-Journalism#scribd (accessed 17 November 2014)

teens. The discontinuation of Teen Voice is illustrative that the SPO has not been able to build a strong link with civil society to create a high demand for the continuation of the program.

With regards to assessing the change in client satisfaction in 2012-2014 period, it is worth discussing Teen Voice participants and audience. Social media is one indication of satisfaction. Since KBR initiated its @TEENVO1CE Twitter account, its followers grew to 700 in March 2013[25] to 889 in November 2013 and 1,016[26] in mid-November 2014[27]. Although growth in followers has slowed (189 in nine months to 127 in 12 months) this is not surprising given Teen Voice's discontinuation. FPU commissioned base and end line audience surveys to collect opinions of Teen Voice target audience, intended to help Tempo TV/ KBR68H improve its program and website. Overall findings showed that the majority enjoyed watching and listening to Teen Voice. Three quarters of those surveyed said they learned from the television programs and 88 percent said they learned from radio programs. Almost all children surveyed found Teen Voice to be useful in their daily life, in for example learning and confidence building[28]. This evaluation was unable to conduct a similar survey, but data from interviews and former training participants reported high satisfaction of Teen Voice. The program was seen as providing a venue for the children to express themselves and open the potential for children's participation in media; this was unlike other mass media that sometimes exploited them.

Regarding KBR68H's relations with the public and private sector, and its ability to influence rules, regulations and practices, the evaluation found no significant changes occurring since the baseline. As a platform for public interaction KBR68H considers the public sector to be both a source and recipient of information, or even a client. KBR engaged a number of government representatives by inviting them to be resource persons in Teen Voice episodes. In addition, their client base included the National Family Planning Coordinating Agency, Ombudsman Commission, National Law Commission, Government-owned corporation PT. Pegadaian (Persero), and Ministry of National Education.

As mentioned before, KBR maintains relations with private sector agencies, considering them to be revenue sources. This has not changed since the baseline. KBR received corporate social responsibility (CSR) funding from Danone, Coca Cola and Exxon Mobil. There is no evidence that KBR68H has influenced private or public policies and practices. The only way it does so is indirectly, by publishing and airing credible news of issues which may concern policies and practices.

**Score baseline 2012 on an absolute scale from 0-3: 2**

**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.5 Civil Society Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in chapter 3. In this section we describe how KBR68H is coping with that context.

Indonesians have come to embrace social media. Given this context, the launching of PortalKBR.com since the baseline has been a strategic move. The portal is a logical development for the radio network. As the managing director, Tosca Santoso, explained, "All mainstream media need to think about the fundamental transition to digital media". He believes that this is the next best step for KBR68H. In 2012, Teen Voice starting using Facebook and Twitter as a platform for audience interaction. Both forms of social media are popular amongst Indonesian youth.

KBR68H institutionally has been able to adapt to changes in the media environment. Through the web portal and the internet, KBR68H has changed the flow of information from being one-way to two-way communication with radio partners and audiences.

## 5.3 To what degree are the changes attributable to the Southern partners?

### 5.3.1 Civic engagement

The identified change, i.e. increased participation of teenagers in the news program Teen Voice, was achieved in the period 2011 - 2013. More teenagers were exposed to independent news produced specifically for a young audience. The televised and radio broadcasted version of the program reached a wide audience by through 51 radio stations reaching some 770,000 young people and 23 television stations reaching some 400,000 viewers in 2013. In 2013, however, the audience numbers dropped with the discontinuation of Teen Voice television and radio.

Since 2012, the last year of the program, KBR expanded to web-based platforms. This new media form, although it has reached fewer audiences, has in 2013 been able to create more interactive communication with a smaller social media audience.

There are two pathways that were considered for the increased participation. The first attributed this change to the expansion of Teen Voice to digital media, whilst the later considered this as a result of traditional media forms, i.e. television and radio.

*Pathway 1:* KBR68H's use of social media platforms, Facebook and Twitter, and KBR68H's portal resulted in a larger audience.

The web-based platforms allow for an optimum utilization of social media for more interactive interaction with target groups. Social media platforms expand the opportunities for teenager viewers to be reporters and to propose story ideas, enlarging opportunities for engagement. The involvement of teenage reporters helps sharpen the story angle to capture the views of target audiences.

The following information confirms this pathway to increased participation of teenagers:
- The web portal, social media and Twitter are active and have 63,000 followers (as of 17 November 2014);
- Teen Voice is part of KBR web portal (Source: PortalKBR)[29]
- Participation by teenagers is documented in the portal[30]
- Content analysis of teen voice news by the evaluator in the web portal shows contents produced by teenagers (see for example interview by teen reporter as reported at http://www.portalkbr.com/teenvoice/bincang-kita/3030616_6437.html).

The following information rejects this pathway:
- Better coverage through traditional media forms (television and radio);
- Visitor-specific information per age-group (this information was unavailable).

*Pathway 2:* The Teen Voice program was expanded through mainstream media (television and radio). The following information confirms this pathway to increased participation of teenagers:

- Broadcasting of Teen Voice television episodes broadcast three times a week with 30-minute episodes on 22 local television stations, as well as on Channel 068, subscription-based AORA TV;
- Broadcasting of live shows twice a week on two radio stations in Jakarta, which was then relayed by 51 local radio stations;
- Content produced focuses on youth/teenagers (10-17 years old) as an audience and target groups are satisfied.

[29] PortalKBR. Available from http://www.portalkbr.com/teenvoice/index.html (accessed 17 November 2014)
[30] Ibid

The following information rejects this pathway:

- Pilot project with TransTV cancelled;
- Teen Voice program was discontinued on mainstream media.

**Conclusion**
Based upon the analysis of information available, we conclude that the most valid explanation for the increased quality of participation of the target group in Teen Voice since the baseline is the shift towards a web-based platform for Teen Voice. However, from July 2011 to December 2012, mainstream media was responsible for an increased exposure of teenagers to news broadcasts. In particular, the expansion of Teen Voice to television in 2011 created a larger audience base and more opportunities for participation. Thus, all three formats were necessary to achieve the outcome. It was the combination of both pathways that created the change from July 2011 to 2014. The role of the SPO was the production of content, the training of 12 journalists, training of young presenters, and the dissemination of content through their network and the development of a web-portal to make materials available through the internet. All these elements facilitated interaction through three different formats: television, radio and web-based.

## 5.4 What is the relevance of these changes?

### 5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

The Theory of Change (ToC) of the 2012 baseline illustrated that KBR sought to provide quality news content aiming to assist the formation of an open, independent and ever growing society. The main critical assumption lay in the connection between quality of information and quality networking; and finding a balance between profitability and idealism. The second assumption rested on the government maintaining an environment that supported freedom of information and a conducive civil society that promoted positive forms of expression. Last, professional management was considered to essential in achieving desired changes.

With regards to the changes in civil society dimension in improving the network of radio stations, this is still very much relevant to the ToC. One of the preconditions of the ToC was quality networking. While no significant expansion has taken place and expectations for 2014 were not attained quantitatively (the number of radio stations in the network remains 900, falling short of the expected 1,000), the development of PortalKBR represents a significant improvement in the ability of transactions to occur between KBR and its network.

KBR's coverage remains prestigious, although it failed to secure new sponsors to enable it to sustain Teen Voice television and radio. The ToC assumed that a high level of organisation would lead to sustainability. The end line found that KBR68H is pushing the boundaries with regards to how it disseminated content, expanding to social and digital media. Nonetheless, KBR still needs to find innovative ways of raising its own funds in order to attract new sponsorship and investment, which has become even more critical given that traditional donors are phasing out of Indonesia since the country became a LMIC.

As for quality of information, success of delivering independent, accurate, credible and sought information was to be rated from KBR's recognition as a reputable organisation. Since the baseline, KBR continued to hold a unique and undisputed position as the largest independent station. In 2013, KBR's subsidiary, Green Radio, successfully encouraged off-air re-forestry actions in West Java that gained support from prominent Indonesians including the former President Susilo Bambang Yudhoyono; writer Ayu Utami; social activist and Ramon Magsaysay Awardee, Teten Masduki; and presenter Olga Lidya. Recently in 2014 Luvi Ana, an editor for Portalkbr.com, was nominated as a candidate for the N-PEACE awards for her work in advocating peace, tolerance, and striving against the women and minority marginalization[31].

[31] N-Peace Network, N-Peace Awards, Nominees 2014, "Luvi Ana: A powerful voice for equality". Available from http://n-peace.net/candidate/candidate-300 (accessed 22 November 2014)

As far as Teen Voice is concerned, external stakeholders interviewed during the evaluation positively confirmed the quality of information produced for Teen Voice, and quantitatively, the program reached a wide audience by being broadcast on 51 radio stations and 23 television stations. Furthermore, the audience survey commissioned by FPU showed that target groups were satisfied with the content produced.

Although the changes in civil society are still relevant to the ToC in 2012, KBR continued to struggle to find its position as a private sector agent with a triangular model of cooperation with the public sector, private sector and civil society. Granted, KBR now has an online and social media following, but this public support has not been able to create pressure and demands for continued production of civic education content on television and radio. The roles of the public and private sectors are limited as KBR's clientele and a financial resource base.

### 5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

Although Teen Voice did not kick off as expected, and now only continues through online media, the interventions of KBRH68 remain relevant to civic engagement. "In comparison to the other age groups, teenagers and young adults consume more TV & radio programs; go more often to the cinemas, surf the internet and read magazines or tabloids more frequently than adults.[32]" The expansion of Teen Voice to television in 2011 and the transition to a web-based platform made sense considering trends in media consumption. Indonesian teens watch up to 4.5[33] to 5[34] hours of television a day. A recent 2014 UNICEF report claims that 30 million Indonesian teens are online; with most on social media. With the growing influence of media on the lives of teenagers and youth, and the numbers of internet expected to increase as technology becomes more affordable, disseminating positive and news-worthy messages can certainly have an influence on the views and opinions of the next generation. New media forms provide opportunities for engagement and ICT-based interventions are attracting more recognition.

In Indonesia's current media landscape, media ownership is concentrated in the hands of a few large multi-media conglomerates. The owners of these conglomerates are politically connected, some even running for presidential candidacy in 2014.[35] Mergers and acquisitions have led to media groups expanding their control in telecommunications. For instance, the CT Group acquired detik.com, one of the largest online media platforms, expanding its influence beyond television to online media.[36]

The Tempo Media Group, which operates KBR68H, unlike its more commercial, advertisement-oriented peers, is renowned for maintaining a high quality of journalism, focusing on the production of documentaries and producing content for local television stations.[37] As such, KBR68H and Tempo fill an important niche in Indonesia by providing quality content.

### 5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

The official terms of reference for sending in MFS II proposals did not mention the requirement to report on Civil Society Outcomes and was only communicated after consortia started to implement

[37] Ibid

their programme. There programme included a programmatic line on Governance with two specific objectives: SPOs including media play an effective role in terms of providing checks and balances related to legislative processes, policymaking and/or policy implementation and; SPOs including media participate more actively, have a stronger voice in political processes at different societal levels and/or deliver more quality. The KBR Teen Voice programme links to this second objective.

In Indonesia, Press Freedom 2.0 has three objectives: To promote gender equality in the Indonesian society with a focus on the prevention of women trafficking and support for its victims; To promote a free and professional media landscape with a focus on the development of high quality news and information programs aimed at children and youth (through Kids News Network), as well as independent journalists; To strengthen the capacities of and links and synergy between civil society organizations and media initiatives. The Teen Voice programme links to the second objective.

The KBR programme hence has been relevant in the light of these programmatic frameworks. After the project ended KBR continued to engage with the international Kids News Network, but Free Press Unlimited did not react to a request for a short interview on this network and KBR's role in it.

As noted by FPU, the biggest challenge with KBR was to develop and implement a sound business strategy that would ensure sufficient income to cover production and broadcast costs, which however did not materialize.

## 5.5 Explaining factors

### 5.5.1 Internal factors

When the project ended in December 2012, the number of crew members was cut back from six to three, hence decreasing KBR's capacity to ensure that children's voices continued to be heard and seen in Teen Voice Program. KBR was not successful in making a business plan in 2013 that would ensure the continuation of the Teen Voice Programme. However mainstreaming these voices requires considerable investments and financial sustainability which was not guaranteed with the MFS II project.

KBR68H is run by a respected media group, Tempo. Tempo started out in 1971 as a magazine by current affairs critic Goenawan Mohamad and the journalist Yusril Djalinu. The media group is known for publishing and producing critical content, sometimes making it unpopular amongst those with power. KBR68H's longstanding history, links with the Tempo Group, and large network have allowed it to continue to broadcast, able to pay the substantial fees required for frequency leasing.

FPU used the five capacities framework to assess the baseline capacities of KBR68H, later repeated at the end of 2011 (unfortunately no further assessments were made available to the evaluation team).

The following scores were reported:

Table 6
*FPU assessment of KBR68H against the 5C framework.*

| No. | Capacity | Baseline value | 2011 score |
|---|---|---|---|
| 1C | The Southern organisation is capable to commit and act. | 3.0 | 3.2 |
| 2C | The partner organisation is capable to deliver on development objectives. | 3.3 | 3.6 |
| 3C | The partner organisation is capable to relate. | 3.0 | 3.0 |
| 4C | The partner organisation is capable to adapt and self-renew. | 2.4 | 2.9 |
| 5C | The partner organisation is capable to achieve coherence. | 3.2 | 3.3 |

Source: Free Press Unlimited Annual Report 2011 – Result Area Capacity Strengthening

The assessment shows that KBR68H scored relatively well during the baseline, with slight increasing capacities when implementation was underway. Its online presence was strengthened and training was delivered to staff to improve the quality and information of radio broadcasts. In some elements relevant to civil society, the scores of KBR68H were high (range from 3.5-4, with 4 being the highest score). This partially explains why the networking activities with local radio stations were implemented smoothly. These detailed indicators under the core capacities illustrate this point.

Table 7

*FPU assessment of KBR68H against the 5C framework.*

| Core Capacity (5C) | Press Freedom Consortium Sub-indicator | 2011 score |
|---|---|---|
| 1 | Strategy to engage with the media. | 4 |
| 2 | Organisation's infrastructure is considered sufficient and relevant for its core tasks. | 3.8 |
| 2 | The organisation supports the development of quality media, participation of civil society and/or the accountability of democratic institutions | 4 |
| 3 | The organisation enters into coalition with relevant stakeholders and maintains them. | 3.5 |
| 5 | The organisation has a balanced approach towards engaging in media – civil society co-operations. | 3.8 |

Source: Free Press Unlimited 5C Scan 2011

We may need to acknowledge support from other donor such as MDIF (Media Development Investment Fund) that since year 2000 has been a constant partner, providing a variety of finance and business support to develop KBR68H's content and geographic coverage.[38]

Another internal factor contributing to KBR68H's success is the distribution of its radio content to its partners via satellite. In the past, there was no way for partners to return information back to KBR68H apart from through telephone. The online portal has also acted as a hub, allowing radio partners to send back information daily.

### 5.5.2 External factors

KBR68H has proved to be reasonably capable of adjusting its programs to developments in the external environment. It has been able to find appropriate resource people to be part of the Teen Voice program and has keep abreast with issues that dominate the public discourse. One area where perhaps the SPO was unable to respond sufficiently was the migration of Teen Voice to the web and social media platform of KBR68H. This decision was made amidst financial challenges faced by Teen Voice[39]. The Chief Editor of KBR68H admitted that his organisation responded late and that the move was perhaps not innovative enough.

The number of internet users in Indonesia continues to grow. This trend is very likely to be a contributing factor to an increased popularity of PortalKBR. In 2011, Indonesia counted 55 million internet users[40]. According to the same survey company, MarkPlus Insight, user numbers grew to 61 million in 2012 and 75 million in 2013 (roughly 30 percent of the population)[41]. Amongst the respondents, who used internet more than three hours a day, the 15-30 year-old age group dominated.

Internet in Indonesia has great potential if media is used as a means to improve the quality of life and information distribution. But distribution is still marked by a digital divide. According to a report produced by Internews, "This is not only a result of geography, but also a consequence of government policy and programs, and of business practices[42]." More citizens may be using internet but those who are internet literate tend to reside in urban areas as 65 percent of the country's villages have no access to any network[43]. In the future, mobile internet usage has the potential to lessen this divide.

[43] Ibid, p.8

By comparison, the penetration of television is higher, with almost 100 percent of household owning a television in 2011[44]. What this means is that with Teen Voice now only being broadcast through the Internet, its audiences are likely to be the urban rather than rural youth.

In March 2011, a book-pack edged bomb was sent to KBR68H's office. The package was suspected to be targeting a moderate Islamic scholar with links to ISAI and a reaction to KBR68H's show on religious tolerance. Concerns over a conducive media environment remain. At the policy level, there are many overlapping regulations on the access to information but no revisions to laws regulating the media since the baseline. Law No. 32/2002 on Broadcasting is seen to create unfair advantages to large media conglomerates and there is a risk that ownership may become too concentrate at the expense of diversity of opinions[45]. Additionally, the application of the Electronic Information and Transaction (ITE) Law No. 11/2008 has drawn concern from groups like Amnesty International for criminalizing freedom of expression and potential paving the way for restrictions to online media[46].

### 5.5.3 Relations CFA-SPO

FPU undertook a series of trainings to support the Teen Voice project. The aim was to assist KBR68H in capacitating Teen Voice staff to produce news content for children, which required a different journalistic approach[47]. Most of the trainings received positive feedback from KBR68H.

A second element of support from FPU was in the form of creating linkages between Teen Voice and the World Kids Network and Kids News Network. These linkages were intended to create a platform for cooperation and generate revenues for Teen Voice. The exchanges with WKN came quiet late in the intervention and it is unclear how effective the KNN platform was in generating revenues. Inputs from FPU were considered by KBR68H as the facilitating factors to their achievement.

# 6 Discussion

## 6.1 Design of the interventions

KBR68H's interventions were based on the assumption that youth and teenagers are underrepresented in Indonesian media, and that were very few programs that cater to this under-served target group. KBR's Teen Voice was based on the premise that television and radio programing could provide venue for civic education that in turn would promote civic engagement by creating a well-informed and engaged youth/teenage public who promoted democratic ideals.

While this assumption was valid, the program design and interventions would have benefited from a more in-depth assessment of the links between civic participation and media usage among youth, factoring in specific age groups, types of media used, and identifying information gaps. This kind of assessment would of course require financial resources and a willingness on the part of the funding agencies to invest as well as consensus between SPO and the CFA that the choice of the target group made by the SPO, not the CFA

Another feature of the design which could have been stronger was the targeted age group. This seemed to vary from one report and document to another; some mentioning 10 to 14, others 10-17 and 12-17). The audience survey also found that younger, elementary school-aged children were more impressed with Teen Voice than older children. Content could have expressly targeted an even more specific age bracket. This would facilitate the development of appropriate content, selection of prime-times for this age group, as well as taking into account media habits (such as the distancing of urban adolescents from radio and the growing usage of mobile phones and internet).

A majority of the respondents in the audience survey reported to watch Teen Voice with friends and classmates, and many said it helped them at school. The end line survey also goes on to recommend a better linkage between Teen Voice content and school lessons. This is probably a worthwhile suggestion for improving future designs, especially since it offers a link with the most widespread source of civic education, namely formal school systems. At a regional level, this could then be linked to KBR's radio network, promoting youth activism in local radio stations. Additionally, it would potentially provide KBR with a means to promote public or government financing of such a program.

At the design stage, KBR68H expected support and sponsorship for Teen Voice from the commercial sector and government to sustain the program. FPU also linked it to KNN to derive revenues from uploaded content on the web platform. But KBR was unable to maintain the operations and benefits of Teen Voice beyond 2013. This is partly because planning for sustainability happened too late. The business plan development began late in 2012 and wasn't completed until after the project life time. Other interventions were not sufficiently timely. For example, the Kids News Summit held in November 2013 included a session on business plan development, but this came too late for Teen Voice. The issue of financial sustainability should have been addressed from the start and integrated into the way the project was implemented. For instance, the linking and networking activities supported by FPU, as well as the trainings, should have been focused equally developing quality programming as on KBR's institutional ability to attract long-term public and private funding for such programs.

If Teen Voice, or similar interventions, is considered for replication, then development partners will need to take the ever-changing media landscape into account. More specifically, the internet should be considered as both a source for sharing and promoting and a source of revenue. PortalKBR.com and KNN are already using this concept. Nonetheless, the power of the internet is still underutilized. For instance, KBR68H could be pushing the boundaries in developing mobile technology or web-based applications to spur greater engagement of their target youth audiences. Even in countries like Indonesia, schools are using online platforms and Internet tools for course content and home work. Getting involved in this area through web-based content or applications is a potential worth exploring. This would also drive an interest from private and public sector players to invest in KBR and contribute

to sustainability. A solid sustainability plan should be drawn up from the start, identifying what resources may be needed to build the capacity of the SPO and make the program financially viable.

KBR68H will need to start pushing the boundaries of how to integrate traditional media and internet. Some options could include exploring podcasting and developing YouTube channels that appeal more to a young target audience. YouTube stars may start to rival television stars in Indonesia and are attracting youth interest. Promoting young television and radio presenters coming from KBR's regional network on YouTube would be a way to tap into the new medium. This would also offer an opportunity to promote more youth leadership, rather than just focusing on promoting participation as was done by the Teen Voice intervention.

# 7 Conclusion

In this chapter we summarise our findings in relation to each of the evaluation questions:

**Changes in the civil society arena of the SPO**
In the 2012 – 2014 period the most important change that took place in KBR's civil society arena is related to Civic Engagement. Between 2011 and 2013 Teen Voice expanded through televised and radio broadcasted programs. According to KBR68H's own estimated the relay of the show through 52 radio stations and 22 television stations relayed an estimated 1.17 million youth and teenagers. This number is impressive. The content was produced involving youth reporters and presenters with a focus on presenting issues through the viewpoints of teenagers. As the audience survey, covering 300 children showed, the audience was enthusiastic about the content of the shows. Children enjoyed the content and felt that it was of use in their daily lives. In the second period, Teen Voice television and radio was discontinued due to a lack of interest from potential funders. Fortunately, KBR68H had already begun to expand Teen Voice online through a portal. KBR succeeded to disseminate content through its KBR68H portal and through social media ensuring that Teen Voice continues until today. The fact that more and more Indonesian youth are consuming media content through their computers and mobile devices justifies the decision to shift the Teen Voice to an online version, in addition to financial constraints. However, there is still a plan to televise the Teen Program by the Tempo Group. Teen Voice has been brought under the Tempo Group since January 2015.[48]. The online platform affords new opportunities for the show to engage audiences. Two-way communication has improved through Twitter and Facebook. Apart from this, initiatives have developed to start the television programme again because Teen Voice is now under the Tempo Group[49].

Throughout 2012-2014, KBR68H also expanded its networks with radio stations. The network grew from 850 to 900 radio stations in this period. KBR68H maintains a reputable position as an independent media source known for its high-quality content and has the infrastructure to broadcast in the Asia-Pacific region. This implies that it improved it 'level of organisation' in CIVICUS terms. There is no evidence that this network expansion had positive consequences for Teen Voice since the programme has not become part of KBR68H's core programme, nor has it been institutionalized by its radio network.

**Contribution analysis**
The above mentioned changes can be attributed to KBR68H and partially to FPU funding during the first period. Although the televised and radio shows have been discontinued due to a lack of funds, including those from FPU, KBR68H has managed to adapt and make use of the opportunities available through the internet. KBR's intention with Teen Voice is that it remains an interactive platform that would allow for the seeds of democratic traits, such as freedom of expression and constructive dialogue, to be planted. Unfortunately the Teen Voice programme discontinued on radio and television in 2014 and its portal is neither frequently visited nor social media are being used by children to continue raising their voice. The interventions were not sustainable.

**Relevance**
With regards to the baseline ToC, the interventions and outcomes achieved are relevant since KBR68H was able to produce quality content, target an underserved age group, and engage its network disseminate content through television and radio up until 2013.

With regards to the context in which KBR68H is operating, its interventions and outcomes achieved are relevant because media plays a critical role in shaping opinions. Online media and television are the main media outlets in the country programs like Teen Voice fill an important gap in an adult dominated space.

[48] Information received from FPU Program Manager South Asia on 21 January 2015
[49] Information received from FPU Program Manager South Asia on 21 January 2015

With regards to the CS policies of Free Press Unlimited (FPU), KBR's interventions and outcomes were relevant, but not sustainable. KBR continued to engage with the international Kids News Network, but FPU did not react to a request for a short interview on this network and KBR's role in it.

**Explaining factors**

Internal factors that explain the findings are KBR68H's migration of the Teen Voice radio and television programs to a web portal and social media platform and the fact that it did not succeed to develop a business plan capable of financing the further mainstreaming children's programmes into ongoing activities. External factors that explain the findings are the drop of commercial television and radio interest in the continuation of Teen Voice. Factors that explain the findings that are related to the relation between FPU and KBR68H are the support FPU provided through trainings, Teen Voice's membership to the Kids News Network (KKN), and the discontinuation of FPU funding support to the Teen Voice program.

**Design of similar interventions**

Future similar interventions need to take the ever-changing media landscape into account and in particular possibilities to use internet as a source for sharing and promoting children's programmes as well as a possibility to raise revenues. This could be accompanied by the use of mobile technologies that further engage youth.

Table 8

*Summary of findings.*

| When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements? | Score |
|---|---|
| The CS interventions were well designed | 6 |
| The CS interventions were implemented as designed | 6 |
| The CS interventions reached their objectives | 5 |
| The observed outcomes are attributable to the CS interventions | 7 |
| The observed CS outcomes are relevant to the beneficiaries of the SPO | 7 |

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

# Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration
- 1 = A slight deterioration
  0 = no change occurred, the situation is the same as in 2012
+1 = slight improvement
+2 = considerable improvement

| Dimension | | Indicators | Question | Change in the indicators in the 2012 – 2014 period |
|---|---|---|---|---|
| **Civic engagement** | 1 | Needs of marginalised groups | How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies? | -1 |
| | 2 | Involvement of target groups | What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities? | +1 |
| | 3 | Political engagement | How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups? | 0 |
| **Level of organisation** | 5 | Relations with other organisations | In the past 12 months what has been the most intensive interaction you had with other CSOs? | + 1 |
| | 5 | Frequency of dialogue with closest CSO | In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with? | + 1 |
| | 6 | Defending the interests of marginalised groups | Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs? | -1 |
| | 7 | Composition current financial resource base | How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking? | + 2 |
| **Practice of Values** | 8 | Downward accountability | To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them? | 0 |
| | 9 | Composition of social organs | What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for? | 0 |
| | 10 | External financial auditing | How regularly is your organisation audited externally? | 0 |
| **Perception of impact** | 11 | Client satisfaction | What are the most important concerns of your target groups? How do your services take into account those important concerns? | +1 |
| | 12 | Civil society impact. | In the past 12 months, what impact did you have on building a strong civil society? | - 1 |
| | 13 | Relation with public sector organisations. | In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives? | 0 |
| | 14 | Relation with private sector organisations | In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective? | 0 |

| | | | | |
|---|---|---|---|---|
| | 15 | Influence upon public policies, rules, regulations | How successful have you been in influencing public policies and practices in the past 2 years? | 0 |
| | 16 | Influence upon private sector agencies' policies, rules, regulations. | How successful have you been in influencing private sector policies and practices in the past 2 years? | + 1 |

| | | | | |
|---|---|---|---|---|
| **CS context** | 17 | Coping strategies | In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society. | +1 |

# Appendix 2 Changes in civil society indicators between 2012 and 2014

## 1 Civic Engagement

### 1.1 Needs of marginalised groups SPO

In early 2013, the frequency of programing had already dropped to once a week after FPU funding ended. Due to budget constraints there was also a reduction in crew members from 6 to 3. Fewer people and fewer segments of civil society have been reached through the Teen Voice program as the television and radio program ended in January 2014. When it was still being produced for mainstream media, Teen Voice was broadcast on 52 radio stations and 22 local television stations, as well as AORA TV, a subscription-based channel. According to the proposal submitted in early 2011, this program was expected to reach around a million radio listeners and 100,000 television viewers from various groups. Teens and also parents were expected to obtain information from this program, be it from direct listening, from the information passed on by their children or from media reporting the content of this program. In 2013, KBR68H reported that Teen Voice reached 770,000 youth listeners and 400,000 youth viewers[50]. Teen Voice fell short of its radio target, but exceeded its television audience.

In 2012, Teen Voice expanded to online media with support from FPU, uploading content to internet platforms and social media. The program now only continues through an online format. Teen Voice moved from a Facebook group to a fan page (50,609 likes). Later Teen Voice was moved from its own web platform to the KBR68H portal (http://www.portalkbr.com/teenvoice/). Teen Voice's own Twitter site has not grown significantly over the past year (from 889 in November 2013 to around 1,000 currently). But the number of Twitter followers of KBR68H has swelled to 64,900 followers. Teen Voice episodes were uploaded to YouTube, but viewership remains limited[51].

Although in terms of coverage and reach Teen Voice is decreasing, the coverage of KBR68H itself amongst a general population has increased according to published figures. Portalkbr.com receives about 5,839 unique visitors, 3,920 visitors per day, and 7,591 (1.30 per visitor) page views per day (Alexa Traffic Rank).This figure is higher compared with situation in March 2013 (1,000 visitors) as reported in FPU final report assessment. . KBR68H's social media (Twitter and Facebook) now has 64,900 followers. As of November 2014, KBR as a news agency serves some 900 stations in its network across the country, compared with 850 stations in 2012[52].

KBR does not have any age disaggregated information to show whether the audiences reached include teenagers and youth, and other more marginalized groups.

### 1.2 Involvement of target groups SPO

KBR68H's target groups include network radio stations and teenage/youth audiences. Compared to the baseline, the situation in 2014 provides more opportunity for two-way interaction with target groups. This is mainly because of the move to online platforms where interaction is easier, and KBR68H's ability to communicate with its network via satellite, providing opportunities for two-way communication. The establishment of a web portal and the use of social media both invite more interactive contact with listeners and viewers. More participation is encouraged by getting teenage

[50] "Teen Voice Business Plan", KBR68H, 2013

[51] For an example of a video see: http://www.youtube.com/watch?v=YCYyfYzKbjA --with only 45 views by 16 November 2014.

[52] "KBR Proposal", KBR68H, 2012. Available from http://wikimedia.or.id/w/images/5/56/Proposal_KBR68H.pdf (accessed 16 November 2014)

viewers to check the portal, which has on-air materials, as well as other additional materials to be commented on by the viewers. This social media platform is able to give teenager viewers the opportunity to be reporters and to propose story ideas. The involvement of teenage reporters helps sharpen the story angle in terms of seeing the story through the eyes of the teenagers.

Aside from being a more efficient medium to promote involvement, the use of the internet, web portals and social media allows access to a wider audience. KBR expects this to propel the popularity of Teen Voice. Visitors to the KBR portal and social media can now receive Teen Voice updates.

### 1.3 Intensity of political engagement SPO

There is no evidence that KBR68H is more intensely politically engaged with elected agencies. However, some network journalists and local radios reported close relations with local parliament members in journalism relationship. In the workshop with the management, KBR68H claimed that they and their network radios have closer relations with political parties. This relation is one of mutual interest however: parliament members need media coverage and journalists needs news.

## 2 Level of Organisation

### 2.1 Relations with other organisations SPO

As a journalism agency, KBR68H's relations with some 900 radios in their network and other CSOs did intensify, with a larger network. KBR68H's journalists are organised in various networks/umbrella organisations. Examples of radio stations with which it is engaging are SONYA FM, GRESS FM, SP FM, PASPATI FM, KEI FM, SETIANADA FM, MAX FM, PIKON ANAI FM, SWARA ALAM FM, CHANDRA FM. Recently it expanded to partner with SMART FM[53]. Apart from this, KBR68H continued to engage with a number CSOs for advocacy purposes or thematically. Some of these include AJI, WAHLI and ELSAM. CSOs utilize KBR68H's online portal, providing comment and feedback to Twitter feeds for example.

However, on teens and youth, their relations with CSOs who have similar concerns are decreasing as the visibility of teen issues decreases as well. At global level, as reported by FPU in September 2013, KBR is a reliable and active member of Kids News Network:

- KBR has successfully pioneered in the creation of a KNN programme with two broadcast platforms - radio and television.
- KBR participated in both KNN Summits (2011, 2012) since they came on board;
- KBR contributes to WKN according to schedule;
- Teen Voice's editor in chief Fia Martaniah provided two weeks of training to NEFEJ, new KNN member in Nepal in 2012.

### 2.2 Frequency of dialogue with closest civil society organisation SPO

The collaboration between KBR68H and radio stations in its network is characterized by a demand-and supply relationship. As a news provider for its radio networks, KBR68H supplies content regularly to its members. With the launching of PortalKBR.com, there has been more frequent dialogue and exchange between KBR and its network. For instance, the radio networks and the portal have worked together on the design of the websites of their partners. The portal also allows radio partners to send information back to KBR68H more effectively. Right now, KBR68H distributes its radio content to its partners via satellite, but in the past, there has been no way for partners to return information back to KBR68H, apart from through the telephone. The portal acts as a hub, allowing radio partners to send back information daily and changing the nature of information flows, from being one-way to two-way (partner to KBR and KBR to partner).

[53] PortalKBR, "Perluas Jaringan Informasi, KBR68H Gandeng Smartfm Radio Network", 11 December 2013. Available from http://www.portalkbr.com/berita/nasional/3053880_4202.html (accessed 16 November 2014)

It should be noted that radio stations in KBR's network are established as private sector agencies (PT), but they are the closest in nature to KBR itself. KBR also maintains relations with CSO affiliated with AJI and Tempo group, such as Komunitas Utan Kayu and Salihara. In addition, KBR has relations with international NGOs (Hivos, The Asia Foundation, Ford Foundation etc.) in promoting pluralism and freedom of expression as key elements of democracy. However, there is hard evidence showing that KBR's involvement in this network has increased structured dialogue with these CSOs.

## 2.3 Defending the interests of marginalised groups SPO

As demonstrated in KBR's Teen Voice proposal, KBR considers teenagers and youth to be marginalised groups in Indonesian media. Very few mainstream media outlets are available for this age bracket, and those that are tend to be of low quality. Through Teen Voice, KBR68H's has brought teen voices into mainstream media through TV and radio shows. In addition, KBR branched out to social media as a means to engage youth. However, since the baseline KBR has been defending the interests of fewer people because of the closure of the Teen Voice program in 2014. While some of KBR's initiatives still give space for teens to participate in radio, television, and social media, as well as in their portal (http://www.portalkbr.com/teenvoice/), the coverage of these marginalised groups is not monitored. The last data from KBR provided in their business plan (2013) state that overall Teen Voice reached 770,000 youth listeners and 400,000 viewers.

According to KBR staff one group that has been reached with the creation of the KBR portal are migrant workers in Malaysia. The portal allows them to stream content from the local radio stations of their choice. While this is relevant, the assumption can also be made that with the discontinuation of televised and radio broadcasted versions of Teen Voice, fewer rural teenagers are likely to be reached since television and radio is still more popular in urban areas.

## 2.4 Composition financial resource base SPO

In 2011, donor funds compromised 31 percent of KBR's income. In 2014, this dropped to 10 percent. This suggests that KBR is more capable of diversifying its funding sources by mobilizing domestic funds and reaching out to commercial sponsors. It should be noted though that this cannot be attributed to KBR's efforts alone as aid from development agencies in Indonesian has declined as a whole. Nonetheless, commercial funding constitutes 90 percent of KBR's income. KBR68H has succeeded in diversifying its sources of financing. Private patrons and corporations support KRB through their CSR programs. Exxon Mobile and Astra, for example, sponsor talk shows on women's issues. In addition, KBR generates revenues through advertising. KBR is looking at more creative ways to team up with other radio networks, which could be considered rivals as well, seeking areas of shared and mutual interest to expand its audience base.[54] According to a recent report, "The most successful business model in the media to date has been developed by KBR68H, which attracted foreign partners to produce and distribute radio programs." Open Society Foundations, who produced the report, credit KBR for being able to draw on inter-state market funding for their programs while at the same time maintaining their independence and quality.[55] Other evidence, like outcome of the Teen Voice program which was discontinued, suggests that this resource base while improving, is still on shaky ground. KBR faced challenges in securing the sustainability of Teen Voice, and almost had to discontinue its award-winning program 'Asia Calling' as well.

KBR also continues to enjoy the support of international NGOs like Plan International, Ford Foundation and The Asia Foundation, but due to changes in donors' communication strategy, support to KBR has decreased since the baseline. In 2014, most of programs from NGOs are in the forms of short-term programs. A number of ministries and sub-national government agencies also pay for the

broadcasting of public service announcements on family planning, AIDS prevention, forest conservation and other issues.

# 3 Practice of Values

## 3.1 Downward accountability SPO

There is no change since the baseline on financial transparency. As a limited company under PT. Media Lintas Inti Nusantara, KBR68H follows strict regulations on financial audits set by the government. In this regard, the main audience for the financial report is the shareholders (Koperasi Utan Kayu, Yayasan ISAI, individuals and other institutions), although as a limited company, the public can access financial information through the ministry law and human rights.

With regards to the internal control system, there is no difference with the baseline. As a private sector organization, KBR68H's internal control system strictly follows the commercial business standards. There are shareholders, a supervisory board, internal audits, etc. At least once a year there is a shareholders meeting to review the progress of KBR68H, examining both financial and programmatic progress. The board remains the same: representative from ISAI, Koperasi Utan Kayu and Mr. Gunawan Muhammad.

## 3.2 Composition of social organs SPO

There is no change in the organisation structure and as a limited company under PT. Media Lintas Inti Nusantara as the holding company, there are no people representing the beneficiaries (teen) or the marginalized groups as the shareholders. Composition of the shareholders remain the same i.e. Koperasi Utan Kayu, Yayasan ISAI, other institutions and minority individual shareholders.

## 3.3 External financial auditing SPO

In the in 2012-2014 period, there are no changes in the external auditing practices of the SPO. As a limited company under PT. Media Lintas Inti Nusantara, KBR68H follows strict regulations on financial audits set by the government. Their financial report is annually audited by an external auditor and 2013 audited financial report is available and seen by the evaluator.

# 4 Perception of Impact

## 4.1 Client satisfaction SPO

If we want to see whether there was a change in client satisfaction between 2012 and 2014, we need to see at two domains: 1) the network of radios that are clients of KBR68H as news provider and 2) the opinion of the children who were target audiences of Teen Voice.

In 2013, FPU commissioned a second audience survey to assess the opinions of target audiences of Teen Voice. The report found that overall children have positive opinions about Teen Voice television & radio programs. The majority enjoyed watching and listening to Teen Voice. However, many mentioned it was at times uninteresting. Three quarters of those surveyed said they learned from the television programs and 88% said they learned from radio programs. Almost all of children found Teen Voice (TV and radio) to be useful in their daily life, ex: learning and confidence building. Furthermore, the audience survey reported that a majority of children (81%) found content to be appropriate and not frightening. There is a split opinion about whether Teen Voice was sometimes boring: 17% said "yes", 43% said "a little bit", while 40% said "no". For children in the TV group, Teen Voice has several advantages compared to the 'normal' news for adults: more fun (48%); more about children (23%), easier to understand (15%).

This evaluation did not conduct a similar audience survey like the one commissioned by FPU, so there is no statistically representative data to confirm whether there is a change between 2013 and 2014.

What we have is data from interviews with 3 former trainees and participants of Teen Voice. They reported high satisfaction of the Teen Voice program. Unlike other program, according to the respondents, Teen Voice did not exploit youth or teen, but instead was able to go beyond just providing a venue for the children by opening horizons for the participation of youth in media.

In terms of radio network, there is a rapid change in terms of number of network radio, from 7 radios in 2000, 600 radios in 2009 and at least 900 radios over Indonesia and 9 countries in Asia and Australia plus social media networks[56].

## 4.2 Civil society impact SPO

KBR68H's contribution to civil society by design is indirect through independent journalism to support freedom of information. During period 2012-2014, there is no change in this modality. The program funded by FPU added components on teen issues and capacity building for local journalists. In general, the impact on civil society is more relevant to KBR68H as an organisation, rather than the Teen Voice program. In general, KBR68H has impact on civil society through the encouragement of democracy, tolerance and civic participation. KBR also contributes through the production and distribution of high-quality information disseminated throughout a network of local radio stations as well as for its promotion of professionalism in the media world[57].

## 4.3 Relation with public sector organisations SPO

There has been no change since the baseline. As a platform for public interaction, KBR68H considers public sector organisations (PSO) to be in various positions. First, PSOs are sources of information as well as recipients of information. The public is engaged through interactive dialogue episode in radio programs, for example. In a commercial relationship, PSOs are clients of KBR68H that pay for placing news, advertisements, or public service announcements in their program. Their clients are both national and sub-national government, such as the National Family Planning Coordinating Agency, Ombudsman Commission, National Law Commission, corporation PT. Pegadaian (Persero), Ministry of National Education, etc.

## 4.4 Relation with private sector agencies SPO

There is no change during the 2012-2014 period in terms of the nature and type of relationships with private sector agencies. KBR68H maintains a company-to-company relationship and private sector agencies, who are both clients (utilizing KBR's services, such as advertising) and donors (through their corporate social responsibility programs). ASTRA, an Indonesian company and others (Danone, Coca Cola, Exxon Mobile) remain their clients in 2014.

With regards to KBR's relations with other private sector agencies in the same field, more is mentioned under indicators 2.1 and 2.2. Also worth mentioning is the expansion of KBR68H's audience reach which was a result of a new business partnership agreement signed with SmartFM in 2013, giving KBR a better footing in a number of major cities in Indonesia.

[57] King Baudouin Foundation. 2009. *Press Release: The 2008-2009 King Baudouin International Development Prize has been awarded to the radio press agency KBR68H (Indonesia) in recognition of its contribution to democratic development*. Brussel, 19 May. Available from https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=5&cad=rja&uact=8&ved=0CDUQFjAE&url=http%3A%2F%2Fwww.kbprize.org%2FuploadedFiles%2FKBPrize%2F04Winners%2FAll_winners%2F2009_persbericht_Eng.doc&ei=qChoVNv7N5CMuASa8YDwCQ&usg=AFQjCNHeACVmEStIKqAOL8aNCTSF_VP2Yg&sig2=3WwQzt7IAk_4fsUH4_efxA (accessed 16 November 2014)

## 4.5 Influence upon public policies, rules, regulations SPO

The role of KBR68H in influencing public policy remains the same as in 2012, i.e. indirect influence through setting the public discourse that later together with other factors cumulatively will build public pressure. In 2014, as in 2012, there is no mechanism to track KBR68H's contribution to developing public pressure for policy change by reporting on "headline news" through their radio network. One recent example found was a 2013 Indonesian Civil Society Report on the Implementation of the International Covenant on Civil and Political Rights (ICCPR). KBR articles posted on their website were cited as trusted news sources on events relating to religious discrimination.[58] This suggests, that amongst Indonesian NGOs, they have become an important source of information. Any policy influence KBR has had in the past two years has been indirect.

## 4.6 Influence upon private sector agencies' policies, rules, regulations SPO

KBR68H's main target is freedom of information and private sector agencies' policies are not their immediate target. They do not seek to influence the private sector although they wish to set an example amongst competitors of an independent company that adheres to democratic principles. This position has not changed since the baseline. Like in 2012, during 2013-2014 KBR has been strengthening their focus on environmental issues, continuing to cooperate with ASTRA and Green Radio to promote "green journalism".

# 5 Civil Society context

## 5.1 Coping strategies

Indonesians have come to embrace social media. According to social media consultancy Socialbakers, some 7.6 million Indonesians joined Facebook in September 2014 alone. In this regard, KBR68H has kept abreast with the latest media developments and the pace its consumers have set, moving online and using their mobile phones at an increased frequency. The launching of PortalKBR.com since the baseline has been a strategic move. The portal is a logical development for the radio network. As the managing director, Tosca Santoso, explained, "All mainstream media need to think about the fundamental transition to digital media". He believes that this is the next best step for KBR68H.

This social media boom has had a large impact on political and social issues. With regard to civil society dynamics, the transformation of KBR68H from mainstream radio to digital and social media can be seen as good coping strategy. When interviewed, Santoso stated that social media plays a supportive, rather than simply competitive, role with respect to traditional media. Social media can be used to increase the loyalty of radio listeners by reaching out to them, involving them in stories and engaging them. According to KBR's management, social media allows them to reach out to people where terrestrial radio cannot reach, which speaks to the expanding footprint of mobile phone service in Indonesia.

The above situation is well recognised by KBR68H as an institution and the fact that KBR68H now is growing bigger in terms of number of staff and portfolio, we may say that institutionally, KBR68H can cope with the recent development in media and journalism arena. However, KBR has not yet capitalized on these developments to advance specific issues, like teenage voice and representation in the media. These concerns were also raised by FPU assessors (Chermene Fisser and Yvonne Pinxteren) who conducted an assessment of Teen Voice in August-September 2013. They noted that Teen Voice has not adequately coped with the financial and market challenges.

Report CDI-15-024

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

WAGENINGEN UR
For quality of life

Klaver, D.C., Prasetyo, K., Smidt, H., February 2015, *KWLM end line report; MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and SurveyMETER. Report CDI-15-066. Wageningen.

This report describes the findings of the end line assessment of KWLM that is a partner of Hivos.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses KWLM's contribution towards strengthening Civil Society in Indonesia and it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which KWLM contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain KWLM's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

# Acknowledgements

SurveyMeter and CDI are thanking the staff and the leaders of all Southern Partner Organisations that participated in collecting information for the evaluation of the contribution of these partner organisations to creating a vibrant civil society in Indonesia. They also thank the Co-Funding Agencies and the Dutch Consortia they are a member of for making background documents available. We hope that this evaluation can support you in better positioning yourself in the Civil Society Arena of Indonesia.

# 1 Introduction

This report presents the civil society end line findings of Koperasi Wana Lestari Menoreh (KWLM) in Indonesia which is a partner of Hivos under the Dutch Consortium People Unlimited 4.1. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study, KWLM is working on MDG7ab.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch CFAs and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

*Changes in the civil society arena of the SPO*
In the 2012 – 2014 period the most important change that took place in the civil society arena of KWLM is related to Civic Engagement and Level of Organisation according to the findings in chapter 5. These findings were obtained through an analysis of documents, a workshop and follow-up interviews with the SPO, and interviews with external resources persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

*Contribution analysis*
Based upon an analysis of the projects and programmes financed by the Dutch NGOs, four orientations strategic for civil society development were identified: Ensuring that more people from more diverse background are engaging in civil society activities; ensuring that the organisations that receive support from the SPO are capable of playing their role in civil society – intermediate organisations; strengthening the relations with other organisations in civil society to undertake joint activities, and; influencing policies and practices of public or private sector organisations. For Indonesia the focus was on the capacity of intermediate organisations to play their role in civil society and on policy influencing.

Based upon an estimation of the percentage of the total MFS II budget related to interventions that are relevant for civil society, those SPOs whose absolute budgets for civil society were most important were selected for in-depth process tracing on two outcomes related to the above mentioned strategic orientations. The evaluation team conducted a quick assessment on contribution of the other SPOs. KWLM was not amongst those SPOs selected for in-depth-process tracing and only one outcome was selected for the evaluation.

The evaluation team selected one outcome to evaluate the effectiveness of KWLM in civic engagement and level of organisation. Under KWLM, smallholders have been organised to produce certified, legal timber. Smallholders have gained an interest in sustainable community logging because the certified timber can fetch a better price. Credit services have also been offered to smallholders, and this has helped them become less dependent on middlemen. The cooperative model of KWLM, which combines business with sustainable community forest management, has been effective to engage communities and to link communities to a premium market. It has attracted smallholders in the cooperative ranks,

which has grown from 322 persons in 2009 to 1,207 persons in 2014, with another 1,100 waitlisted. KWLM's certification service and transparent timber price calculation are key incentives for community members as it gives better prices for timber products. Active and expanded membership of KWLM is a proxy of participation undertaken by individuals to advance shared interests at different levels. The contribution of the SPO towards achieving this outcome is through combining agricultural services, namely certified timber, the provision of free seedlings and access to credit. A contributing factor has been the enabling environment, where the Kulon Progo government has promoted community forest management and have been keen to learn from KWLM's approach.

*Relevance*
Interviews with staff of KWLM, with external resource person, with the liaison officer of Hivos, as well as contextual information helped to assess the relevance of KWLM's interventions in terms of; its Theory of Change (ToC) for Civil Society (CS) as designed during the baseline study; the context in which KWLM is operating; the CS policies of Hivos.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because KWLM's ultimate objective is to support the prosperity and autonomy of forest-dependent communities. The delivery of services, in this case certification, credit, the promotion of reforestation, ant others has led to support from the public sector, community awareness of the importance of sustaining timber production, and access to markets.

With regards to the context in which KWLM is operating, its interventions and outcomes achieved are relevant because they are in line with the Government of Indonesia's efforts to combat illegal logging and promote community forestry schemes. Pressure to address these issues have arisen from global market actors and consumers, and the Government of Indonesia is keen to maintain its position as an exporter of certified timber.

With regards to the CS policies of Hivos, KWLM's interventions and outcomes are relevant to the Green Entrepreneurship programme. Through this programme, the CFA has supported smallholder participation in markets that are driven by sustainable economic and environmental principles.

*Explaining factors*
The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within the KWLM, the external context in which it operates and the relations between KWLM and Hivos.

Internal factors within the SPO that explain the findings are KWLM's position to bridge the communities with private sector buyers as well as being a frontline service provider. KWLM implements a diversified outreach strategy through which in links cooperative members to credit union services. However, there are also inhibiting factors that have affected the extent to which the cooperative has grown. KWLM faces difficulties to maintain cash flows between buyers and the communities, and this is inhibiting the further expansion of the cooperative.

External factors that influence KWLM's achievements have been the growing demands by global markets that imported timber products are certified and come from sustainably managed forest areas. The Government of Indonesia has responded to these demands by developing its own certification system, which has also been applied by KWLM.

Factors that explain the findings that are related to the relation between the KWLM and Hivos are the linkages that Hivos has facilitated between KWLM and Telapak, another Hivos partner that is active in sustainable forest management. This network helped KWLM obtain FSC certification.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the MDG/theme KWLM is working on. Chapter three provides background information on KWLM, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Hivos. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in Appendix 2 of the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in Chapter 4. The answers to each of the evaluation questions are being presented in Chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment

of what elements of the project design may possibly work in other contexts or be implemented by other organisations in Chapter 6. Conclusions are presented in Chapter 7.

# 2 Context

## 2.1 Political context

### 2.1.1 Brief historical perspective

Indonesia's rise to being the world's third largest democratic nation has been lauded by many world leaders. The county is often considered to be a model Muslim democracy. As the fourth most populous nation with an estimated 250 million people[1], Indonesia has sustained its democratic commitment since transitioning from an authoritarian leadership to a democracy in 1998. The decentralized administration now consists of 34 provinces and 508 districts and municipalities.

Prior to 1998, Indonesia was under strict authoritarian regime. Suharto, known for his so-called New Order (1966-1998) regime, ushered in radical transformations that would place social and political forces under direct state supervision. The defining characteristics of the Suharto era were a focus on economic growth and controlled consensus and political stability devoid of dissent. A series of tumultuous economic and political transitions in the nineties severely diminished the credibility of ageing President Suharto, who was forced to resign amidst mass street protests.

His departure in 1998 laid bare three decades of social inequalities, state-perpetuated abuses against human rights, and a lack of civilian liberties. The regime change opened the way for a period of *Reformasi* started under the presidency of B. J. Habibie (1998-1999) and continued by Abdurrahman Wahid (1999–2001), Megawati Soekarnoputri (2001–2004), and Susilo Bambang Yudhoyono (2004–2014). Restrictions on citizen participation, press freedom and association were removed. Democratic reforms and decentralization led to direct elections, portioned authority, devolution of authority to regional authorities, formation of new political parties and ended the military's parliamentary influence. The distinct historical periods of the New Order Regime and *Reformasi* (1998-present) have shaped the emergence of civil society. Defining characteristics are summarized in the table below.

Table 1
*Characteristics that have defined the emergence of civil society in Indonesia*

| Characteristics | New Order, authoritarian period (1966 – 1998) | Reformasi (1998 – present) |
|---|---|---|
| **Political system** | Centralized, authoritarian characterized by unipolarity. Golkar as the dominant political party.<br><br>In 1999, there were 27 provinces, 306 districts and around 60,000 villages. | Decentralized, democratic. Fragmentation of power and atomization of patronage relationships. Emergence of numerous political parties. Direct presidential elections since 1999.<br><br>Decentralization altered the political and administrative landscape: 34 provinces, 410 districts, 98 municipalities, 6,944 sub-districts and 81,253 villages.[2] |
| **State-citizen interaction** | Benevolent leader, obedient population. Down to the village level, the state permeated society. | Modern political culture marked by diminishing hierarchy between the state and citizens, allowing for citizens to interact more freely. |
| **Citizen representation and** | Strict control of speech, expression and association. | Burgeoning of CSOs, pressure groups and NGOs following the political euphoria after Suharto's |

[1] In 2010 the population was estimated to be around 237 million people (BPS 2010 Population Census). The current figure is an estimate from BKKBN and similar figures are cited in the CIA's World Fact Book and the World Bank.

[2] Rumah Pemilu, "Gambaran Singkat Pemilihan Umum 2014 di Indonesia", 3 July 2014. Available from http://www.rumahpemilu.org/in/read/3351/Gambaran-Singkat-Pemilihan-Umum-2014-di-Indonesia (accessed 25 October 2014)

| | | |
|---|---|---|
| **voice** | CSOs and their networks largely "hiding behind the screen", and operating under state surveillance. A period of growth occurred in 1995-98, as resistance was building. | fall.<br>Indonesian CSOs began to establish new networks internationally. Up until the early 2000s the focus was on state-centrist issues. Later, issues that CSOs were tackling became more diverse, ranging from pluralism, poverty reduction to fulfilment of economic, social and cultural rights. |
| **Media** | No free press, censorship and state-control. Suharto had firm grasp over how to use print & broadcast medias to promote political ideologies. | More vibrant media environment, flourishing of media businesses albeit in control of 12 main conglomerates that are mostly profit-driven and often have political ties. |
| | Limited public and CS use and access to internet until mid-90s. | Twitter nation, widespread social media use. |
| | | Growing realization of the importance of media/free press as the fourth pillar of democracy. |
| **Artistic forms of expression** | Art and literary censorship conducted by the state. Art forms were a means to reinforce political order. | Greater freedom of the arts and cultural sectors. Organizations able to hold art events more freely. Freedom of expression a catchphrase amongst individuals and artistic groups, but challenged by more conservative members of society. |
| **Religious expression and organization** | Regime repressed religious groups, especially radical forms. | Emergence of religious groups seeking to restore Islamic values and defend Muslim values. |

With political reforms came greater freedom and space for civic engagement. In the *Reformasi* period, there was a remarkable increase in the number of civil society organizations, many of which were Islamic in character. In 2000, the Central Agency on Statistics (BPS) recorded around 70,000 registered organizations, compared to just 10,000 in 1996.[3]New groups sprung up with donors encouraging activists to establish NGOs they could fund. These organizations were eager to distance themselves from state and often took an anti-government stance. Proliferating CSOs and NGOs have taken advantage of decentralization and greater regional autonomy to engage in public affairs. Civil society and government relations have improved, although both sides remain sceptical of the others' intentions.

### 2.1.2 Recent trends in the political context

Indonesia is considered to be a story of democratic success, but it still struggles to realize the benefits of sustained and equitable economic growth. In the political context, the main challenges lie in governing such geographically vast and decentralized country, applying principles of good governance and the enormous task of reforming the country's bureaucracy.

Although, Indonesia's 'big bang' decentralization initiated at the turn of the century narrowed the gap between local government and citizens, it has also localized political power struggles. While the devolution of authorities relieved tensions between the central government and the regions, it has also created opportunities for corrupt and rent-seeking practices, at the local level. As indicated by Transparency International's corruption index scores, perceived corruption in Indonesia remains high.

*Transparency International's Global Corruption Barometer survey: Indonesia*

| Year | Corruption perceptions Index Score<br>*(0 perceived as highly corrupt and 100 perceived as clean)* | Rank |
|---|---|---|
| 2011 | 30 | 100/182 |
| 2012 | 32 | 118/174 |
| 2013 | 32 | 114/177 |

Source: Transparency International

In 2013, decentralization was taken a step further with the approval of the Village Law, intended to address weak governance arrangements and empower rural communities to participate politically. The new law could also lead to village elites distorting power relations and misusing government funding if not properly monitored.

Indonesia is still transitioning politically and many challenges lie ahead. According to the 2012 Indonesia Governance Index's Executive Report, "Indonesia is witnessing a paradox in its democracy. On one hand, a successful opening-up of civil liberty has led to the avalanche of democratic demands across the nation, however on the other hand, democratic institutions' are inadequately respond to those demands." Nonetheless, the Indonesian Governance Index, which focuses on measuring provincial governance, does show a general improvement in the performance of the government (political office) bureaucracy, civil society and economic society based on principles of participation, transparency, fairness, accountability, efficiency, and effectiveness between 2008 and 2012. Civil society scores improved the most significantly, while scores for bureaucracy rose slightly.[4]

Table 3

*Indonesia Governance Index: Average provincial scores*

| Arena | 2008 | 2012 |
|---|---|---|
| Government | 4.93 | 5.46 |
| Bureaucracy | 5.53 | 5.58 |
| Civil Society | 4.85 | 6.33 |
| Economic Society | 4.77 | 5.71 |

Source: http://www.kemitraan.or.id/igi

In the past decade, Indonesians have generally enjoyed a freedom to participate in the political process through a direct-election mechanism. However, in September 2014 lawmakers voted in favour of a bill reviving indirect elections of regional heads. The controversial vote provoked public outcry which saw peaceful protests and the public voicing their discontent through social media. In early October, just before the end of his term, president Yudhoyono issued a regulation in lieu of the law, effectively repealing the law until further judicial review.

The recent 2014 elections which marked the end of Yudhoyono's 10-year term, demonstrated that Indonesian voters are increasingly voting for popular figures irrespective of political party alliances. While practices of corruption, vote-buying and poor voter administration remained in the recent election, the public seems to have matured politically, indicated by the enormous interest in televised debates between the leading candidates. The appeal of the newly sworn in President JokoWidodo, popularly known as Jokowi, has come from his hands-on, man-of-the-people approach. As Jokowi begins his five-year term he will need to start addressing a myriad of challenges that include corruption, stagnant economic growth, and human rights concerns, particularly with respect to the rights to freedom of expression, peaceful assembly, and religious intolerance. If left unaddressed, these challenges could seriously undermine Indonesia's stability and democratic reforms.

[4] The IGI uses a scale of 1 (lowest) to 10 (highest). Data is available online through their website. Indonesia Governance Index, Data, "IGI Executive Report". Available from http://www.kemitraan.or.id/igi/index.php/data/publication/factsheet/275-igi-executive-report (accessed 25 October 2014)

## 2.2 Civil Society context issues with regards to the MDG

Land rights and natural resource protection have been a long-standing issue for Indonesia. While Indonesia has adopted and amended laws to improve the rights of smallholders and indigenous communities, many of these regulations have faltered in their implementation. Part of the issue lies in the overlap and lack of clarity of laws adopted that regulate different sectors and local legislation. Another issue is that there is a lack of oversight in the procedures such as granting permits and licensing. These problems, which are commonly found across development sectors, are compounded by a lack of information among local communities on what the laws regulate and their rights vis-à-vis them.

In 1999 the Government of Indonesia passed the Forestry Law (Law No. 41/1999). This law classified all land into two designations: 1) state forests (*kawasan hutan*) as land bearing no ownership rights and further categorized by three allowable land uses, namely conservation, protection and production forests, and; 2) non-forest estates (*area pengunaan lain*) as those areas designated for non-forestry use such as agriculture and settlement[5]. Law 41/1999 regulated the administrative authority of the forest sector. It was designed to reaffirm control of the forest sector in the hands of the central government after the issuance of Law 22/1999 on Regional Governance, which for a brief period saw district governments taking a proactive role in administering forests and issuing timber extraction permits[6].

In 2007, the Government of Indonesia issued a regulation on Forest Management Planning (PP No.6/2007) which introduced schemes for community forestry, opening up opportunities for these initiatives to be registered.[7] The schemes granted long-term forest management rights to communities. *Hutan desa* (village forest) is one such a scheme that has the potential to improve the welfare of rural communities. More recently in 2013, the country's constitutional court accepted a petition form the Indigenous People's Alliance (AMAN) to review articles of the 1999 Forestry Law. This resulted in a greater recognition for indigenous people's rights by declaring that customary forests should not be classified as state forest areas[8].

Nonetheless, there continue to be many gaps in Indonesia's regulatory framework that have allowed for the over-exploitation of natural resources. For example, the Forest Law does not contain clear criteria for land status conversion[9]. Inconsistent legislation has led to different interpretations of existing policies.

In the context of decentralisation, the devolution of power to the subnational level has increased deforestation and forest degradation rates[10]. Local authorities have issued forest permits and permits for estate crop production and mining activities with little concern for sustainable natural resource management. "In essence, the devolution of law-making authority to regional officials has, in the absence of unambiguous laws, transparent processes, clearly defined powers and supervision, resulted in a mixed bag of rules and regulations and hence inappropriate and overlapping permits, such as the issuance of estate crop permits for forested areas.[11]"

Despite the above issues, the last decade has seen a unique transformation of the government's position on illegal logging "from denial to open acknowledgement that illegal logging is a severe

problem"[12]. Pushed forward by consumer countries and global timer markets, as well as NGO campaigns, timber legality certification gained traction in Indonesia in 2007. Efforts cumulated in the enactment of Indonesia's own verification mechanism in 2009. This mechanism is meant to improve the credibility and legality of timber products from Indonesia[13]. An Indonesian Eco-labelling Institute (*Lembaga Ekolabel Indonesia*/LEI) was formed to facilitate the developments of standards compatible with FSC and market demands. In 2011, Indonesia also signed bilateral Voluntary Partnership Agreement with the European Union. This laid the ground work for the European Union's acceptance of the development of a national legality assurance system that could track timber movement from producers to the international market.

# 3 Description of KWLM and its contribution to civil society/policy changes

## 3.1 Background KWLM

*Koperasi Wana Lestari Menoreh* (KWLM) was officially established in April 2009. Based out of Kulon Progo District, Yogyakarta Province, the vision of KWLM is to develop Kulon Progo to realize a sustainable natural environment that can generate profits for community members in a fair manner[14]. The mission of the cooperative is threefold, namely:

1. To achieve a sustainable natural environment that has optimal ecological and environmental functions;
2. To create jobs for citizens of Kulon Progo, especially for cooperative members;
3. To empower communities in increasing revenues generated from sustainable forestry, agriculture, plantations, animal husbandry and fisheries.[15]

The members of KWLM consist mainly of small-holder timber farmers. Agro-forestry is the predominant livelihoods of residents in Kulon Progo. Farmers cultivate several wood varieties including teak, mahogany, *albaziafalcataria*, Indian rosewood, *hibiscus tiliaceus* and acacia.

Since the beginning, KWLM has been assisted by Bina InsanMandiri Foundation (YABIMA) and Bogor-based PerkumpulanTelapak[16]. Telapak, an environmental organisation, has a wide national and international network from which KWLM has been able to benefit as it was assigned by Hivos to provide direct technical assistance to KWLM. The cooperative model of KWLM is based on Forest Cooperative Lestari Jaya in Southeast Sulawesi. KWLM is a modestly-sized cooperative with members in 15 villages and 12 paid staff members. KWLM's strategy is to create employment opportunities through sustainable forest management and to develop non-timber forest products that have a high competitive advantage. It refers this as 'community logging' (Comlog). KWLM has introduced eco-label certification as a solution to over-exploitation of timber and low commodity prices.

KWLM manages three business units, which are: 1) certified timber, 2) herb and spices, vegetables and other agricultural products, and 3) seedlings. These products are marketed under the name of Poros Nusantara Utama, Ltd, of which KWLM is shareholder. This company is a socially responsible corporation that works together with KWLM and its members. KWLM and PT.Poros are market leaders for certified timber in Kulon Progo district.

## 3.2 MFS II interventions related to Civil Society

Target communities in Kulon Progo face frequent droughts and unsustainable logging practices have led to environmental degradation and economic inefficiency. Until 2010, most of the people in these areas were practicing "wallet" driven logging, meaning if they need cash, they cut their trees. Prior to the intervention, communities had limited access to premium timber markets and no linkages to eco-certification. KWLM introduced community-based forestry and logging standards to help local farmers addressing these issues. As stipulated in their proposal submitted to Hivos for period 2010-2012, main objectives of the program are sustainable forests and the welfare of forest dependent community in Kulon Progro district through introducing this logging standards and increasing farmers' capacity to access premium market.

[14] "Cooperative Profile: Profil Koperasi Wana Lestari Menoreh", KWLM

[16] The Forests Dialogue, "Field Dialogue on Investing in Locally Controlled Forestry". Available from http://theforestsdialogue.org/sites/default/files/ilcf_indonesia_field_visit_itinerary_english.pdf (26 October 2014)

KWLM's interventions are intended to contribute to developing the capacity of target populations with regards to enterprise and strengthening their economic position. In addition, the interventions are meant to introduce knowledge and innovative strategies that improve the position of small-scale producers who are vulnerable to fluctuating markets and climates.[17]Hivos supported the initiative because of what it considered to be a unique combination of 'business' and 'environment'[18]. The 2010-2012 project followed from earlier Hivos support in 2008-2009 that focused on strengthening KWLM as an organisation, transferring skills and knowledge on sustainable forest management and small-holder certification.

Through the project interventions, members of the cooperative (i.e. smallholders) would obtain a sustainable income through sustainable forest management and the creation of timber and non-timber forest products. KWLM's activities also focused on building farmers' self-reliance and organisational development so that the cooperative would become independent, professional, and self-sustained. This is most closely linked to 'level of organisation' in the CIVICUS framework.

## 3.3 Basic information

Table 4

*Basic information KWLM*

| | | Details |
|---|---|---|
| Name of SPO | : | KWLM |
| Consortium | : | People Unlimited |
| CFA | : | Hivos |
| Start date of cooperation | : | 1 January 2010 |
| MDG/Theme | : | MDG7ab |
| MFS II Project Name | : | Community-based Local Economic Development through Sustainable Forest Management (Kulon Progo) (Project ID230S01) |
| Contract period | : | January 1, 2010 – November 30, 2012 |
| Total budget | : | € 59,558 |
| Other donors if applicable | : | N/A |
| Estimation of % of budget for Civil Society[19] | : | 12% |

[19] Costs that relate to civil society development or policy influence are those costs that possibly contribute to the development of the CIVICUS dimensions, excluding coordination and office costs; staff costs and financial reserves.

# 4 Data collection and analytical approach

## 4.1 Adjustments made in the methodology of the evaluation

The evaluation team followed the operational guidelines to a great extent, and was able to hold a workshop with all of KWLM's sub-groups. In practice, the workshop lasted six hours, with full participation of all sub-groups. However, due to unfamiliarity with CS dimensions and the large number of workshop participants, the workshop was not fully efficient. Moreover, most participants were elderly farmers with a limited education background. This led to a difficulty amongst participants in understanding the CS dimensions and questions.

Another obstacle was the lack of participant preparation for the workshop, which in the case of KWLM was understandable. Workshop participants were mostly farmers who did not have time to read and understand relevant documents (baseline report, CS dimensions change) shared with them prior to the workshop. All of the participants found it difficult to respond to the CS dimensions of change questions. The evaluation team had to go over each question several times, explaining each one-by-one. Nonetheless, from the level of response, it was clear that some of the participants nonetheless had difficulties in comprehending the questions.

## 4.2 Difficulties encountered during data collection

During data collection, the team experienced the following difficulties:

- Workshop participants did not really understand, or were unfamiliar with the CS indicators or the CIVICUS framework. They found it difficult to relate KWLM's situation with these indicators, although most of them participated in the baseline process. This lessened the effectiveness of the workshop.
- As a cooperative, KWLM does not have a monitoring and evaluation system in place to measure changes other than those directly relevant to the daily operations of the cooperative. This added to difficulties in finding hard data and affected the agreement on the outcomes.
- KWLM has not experience with an external evaluation prior to the MFS-II base- and end line evaluations, which resulted in a lack of preparation and minimum understanding of common evaluation practices.
- Because of the time frame of the project and that of the end line, few changes occurred since the 2012 baseline. The project ended nine months after the baseline was conducted. As a result, the in-country team focused on reconfirming the findings and assessing the extent to which additional changes had occurred and whether interventions and results were sustainable. Ideally, the baseline assessment should have taken place earlier (in 2010). This would have made it easier to identify and track how changes occurred from base to end line.

## 4.3 Identification of two outcomes for in-depth process tracing

This project was not selected for in-depth process tracing. Given the limitations in the data and information available, only one outcome was selected for quick process tracing. The outcome, "smallholder farmers are organised to produce certified, legal timber" was selected to be measured for effectiveness.

The selection was made with the following considerations:

- This is relevant as the pathway and the outcome reflect the pre-conditions stated in ToC such as 'well organized community, capacity to access market' and 'community environmental awareness'.
- The outcome is relevant to two CIVICUS dimensions, namely 'level of organisation' (the cooperative's ability to organise smallholders) and 'civic engagement' (cooperative members gain benefits from being organised, as well as access to markets).
- 'Prosperous and autonomous communities', which is the ultimate goal of the cooperative, cannot only be measured from a better prices that are offered to members for certified timber, but there are other benefits which as a package contribute to sustainable livelihoods. An increase in the number of the cooperative members reflects that more community members have become more 'prosperous and autonomous'.
- Although improved community environmental awareness –as an impact in civil society- can be seen as an interesting outcome to look at, it will not be traced as a distinguished outcome since it is explained and incorporated as one of the pathways which constructs the chosen outcome.
- As a cooperative, KWLM does not have intermediary organisations (IOs) thus it is most suitable to look at the organisation of smallholders into the cooperative as an indicator for level of organisation.

# 5 Results

## 5.1 Results obtained in relation to intervention logic

Table 5

*Overview of results achieved in relation to project plan KWLM*

| Result Level | Description | Level of achievement |
|---|---|---|
| Main Objective | To provide sustainable income to smallholder forest producers through sustainable forest management and the creation of vibrant enterprise of timber and non-timber forest products.<br><br>Implemented in 15 villages, 3 sub-districts, Kulon Progo District. Expected beneficiaries: 2,600 households (min. 30% women actively participate). | Partially achieved: While coverage was expanded to 18 villages, over 4 sub-districts, the number people benefiting as cooperative members was lower than expected. The number of women members in the cooperative is only 20%. |
| Outcome | Cooperative members' income increased (improved welfare) significantly through better and fairer price paid by the consumers as they confidence of the sustainability of the products that they purchased. | Achieved: Although there is no measurement on whether cooperative members' income has increased, members are making more profit in the sales of timber through KWLM. KWLM timber products for IDR 300,000 more per cubic meter compared to the price offered by middlemen. The cooperative is transparent with its system. The cooperative has also gained trust from regular buyers. |
| | Forest area is maintained/protected for its economic value to the community. | Partially achieved: There is no base and end line data or Forestry Department data showing any changes forest area. However, there is evidence that the community is active in protecting and replanting the forest area. KWLM provides 10 seedlings for every tree cut for timber. |
| | Market of certified sustainable timber and non-timber products is expanded. | Partially achieved: An expansion of two buyers of certified wood produced by KWLM to six. However, KWLM still faces difficulties in finding buyers able to pay the amounts necessary for covering operational costs. |
| Output | An increase in the number of registered members as many as 2,600 by end of 2012 | Partially achieved: Membership did not grow as expected, due to additional membership requirements. In March 2012 there were 903 members, which grew to 1,207 during the end line. More potential members have registered but KWLM does not have the capacity to absorb them. |
| | 2,000 hectares of smallholders' forest land receive FSC certificate | Partially achieved: only 417 hectares of smallholders' forest land received FSC certification. |
| | KWLM produces and sells FSC certified timber products. | Partially achieved: KWLM only produced 800 timber products in 2013. The cooperative has limited capital to optimize production and sales. Plans to set up a saw mill did not materialize. |
| | Establishment of demonstration nurseries which provide seedlings to KWLM members. 60,000 seedlings for 1,000 ha in 2011 and 130,000 seedlings for 2,000 hectares in 2012. | Insufficient data: KWLM has a separate unit for managing nurseries. Seedling support for 2012-2014 provided by the local government. |

Most of the planned results were partially achieved. KWLM's reports to Hivos were not very comprehensive and lacked detailed information. This is understandable considering that they are a local cooperative and many of its members have only received basic education, while KWLM's staff are busy running the cooperative's daily operations.

The main area where KWLM fell short was in achieving expected organisational growth. Membership, production and sales were lower than expected. This could also mean that original targets were too ambitious for KWLM. It is also clear that KWLM has struggled to find a cash-flow system that works for them. There is also no substantial evidence that KWLM had any success in expanding the production of non-timber forest products. Nonetheless, in the last two years KWLM has successfully gained the interest and support of the local government who are looking at ways to replicate KWLM's model.

## 5.2 Changes in civil society in the 2012-2014 period

### 5.2.1 Civic engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

KWLM's main focus is on sustainable timber production. As during the baseline, the cooperative's members are predominantly male, land-owners. Since 2012, KWLM has expanded its interventions to an additional sub-district. The number of members has also increased from 903 in 2012 to 1,207 in 2014. An additional 1,100 people are waitlisted as potential members. KWLM has not been able to absorb a larger number due to cash-flow problems.

Females make up just 20 percent of the current members because entry requirements require members to own land or be involved in timber production, both which are male-dominated. Interventions to support female farmers in the production of herbs and spices did not run as expected because KWLM failed to find buyers.

During the end line, the evaluation team found an improvement in the knowledge and confidence of cooperative staff. Compared to the baseline, staff and members were better informed of KWLM's systems and procedures.

The intensity of political engagement of the cooperative did not change since the baseline. KWLM does not have a specific strategy for political engagement, and in fact bars its members from engaging in politics. This is to ensure that the cooperative is not influenced by the interests of specific political parties.

### 5.2.2 Level of organization

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

KWLM's relationships with other like-minded actors has remained the same since the baseline. The networks with whom they are involved stem from the period of Hivos' support. Telapak remains its closest ally, representing KWLM at the national level. At the local level, KWLM has strong ties to CUKATA credit union and collaborates with them to provide credit to KWLM members. In fact both share a similar membership base, area of operations, as well as target locations.

The frequency of dialogue with its closest partners has decreased since the baseline. Coordination and collaboration with Telapak has become less routine, since Telapak's support earlier had focused on technical assistance to get the cooperative up and running. KWLM no longer engages with Yayasan Bina Insan Mandiri (YABIMA), with whom KWLM was promoting community logging, since this local organization has become inactive.

The cooperative also has a broadened network with university students, many of whom have taken a keen interest in studying how KWLM runs its sustainable forestry programme and in certified timber.

Although most of KWLM's members own land, these farmers are small-holders in scale and are still dependent on others for market linkages to sell their timber. KWLM has taken over the position of traditional middlemen, and has supported farmers receive better prices for their timber. As a result of KWLM's support, cooperative members have been practicing a more systematized form of logging and have better financial safeguards. They are no longer forced to cut down trees and sell them at monopolized prices to middlemen when they are in critical need for cash. KWLM has offered them a means not only to see timber at better prices through certification, but also access to credit. KWLM still offers cooperative members swift payments, although there have been some issues relating to cash flow problems. Cooperative members can contact KWLM when they are ready to sell their timber logs, which are then inspected, paid for, and picked up for redistribution to an external buyer.

Compared to the baseline situation, KWLM now has more buyers. The cooperative regularly supplies timber to six buyers who are in the export business. There is still a lack of interest amongst local buyers in more expensive, certified wood. As mentioned before, KWLM has issues with cash flow, since substantial capital is required to purchase ordered amounts from farmers. Payment terms are such that full payments are made upon receipt of the timber, and even then buyers often do not make timely payments.

KWLM also has struggled to diversify its funding resources. Since Hivos funding ended in 2012, no new donors have been identified to provide grants to KWLM. A loan from ICCO has been secured in 2014, which will hopefully help KWLM address the cash flow problems.

### 5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision-making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

There has been no change in downward accountability, composition of social organs and in auditing practices since the baseline. With regards to the latter, KWLM has yet to be audited externally since this was requested by Hivos.

KWLM is governed by cooperative principles, which by Law are based on kinship values and on improving the welfare of members. KWLM is accountable to its members, who are aware of the prices at which wood is bought and sold and are informed of the financial conditions. General assemblies are conducted as mandated by law. The cooperative's internal procedures are guided by its bylaws (AD/ART).

The composition of the social organs of KWLM remains the same. KWLM is open for women members but the numbers of women are still limited. As described in above sections, cooperative members are of an 'elite' group and landless farmers are unable to join the cooperative. As such, power relations remain the same, which is internally spread over the Board of Supervisors, Executing Agency and Director.

### 5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perceptions of both civil society actors (internal) as well as actors outside civil society are taken into account. Specific sub-dimensions for this evaluation are the extent to which the SPO has contributed to engaging more people in social or political activities, strengthening CSOs and their networks, and has influenced public and private sector policies.

The increase in membership since 2012 is an indicator of client satisfaction. There is certainly no lack of interest from community members in joining KWLM, with more than 1,000 other waiting to join up. It is unfortunate the problems with cash flow have affected KWLM's ability to grow further. In addition, the evaluation team interviewed three cooperative members who complained about late payments being made as a result. However, the general satisfaction remains high.

One of the main impacts of KWLM's work has been in promoting legal timber as a means to improve the bargaining position of members vis-à-vis middlemen. Farmers have better options with regards to whom they sell wood to and are less dependent on middle men since KWLM has facilitated the availability of loans.

Public and private sector actors have taken an interest in KWLM. The cooperative model of KWLM has been replicated in Lampung Province while the wood certification system has been taken up by local governments in East Java. Under the current regulations, all concessionaries and forestry companies have to obtain certification. The government of Kulon Progo has requested KWLM's assistance to provide trainings on the process of certifying wood products. This illustrates that KWLM has been able to provide its services to the public sector and has become a model for replication. In 2013, KWLM

was also recognized by the British Council and the Arthur Guinness Fund for its community-based social enterprise and was awarded in the Community Entrepreneurs Challenge.

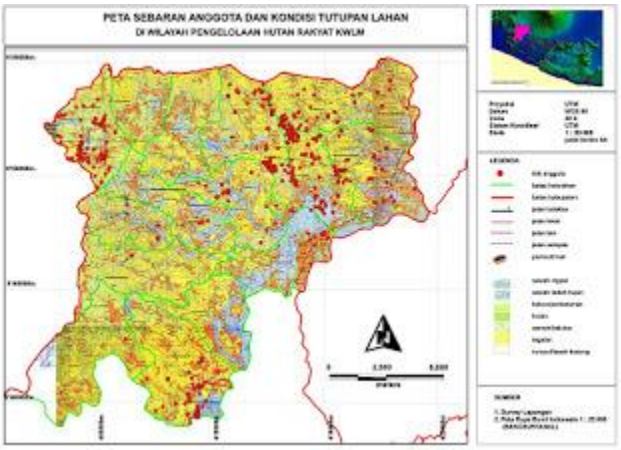
KWLM continued to maintain relations with local government offices in Kulon Progo District which is characterized by mutual exchanges and partnerships. The Forestry Department has provided seedlings to KWLM and KWLM on its part has transferred its technical know-how and expertise to the government. The Forestry Department is also replicating KWLM's GPS-based inventory system to locate, track and record trees and timber. KWLM has helped streamline district certification processes. Its close relations with government officials earned KWLM the trust to issue letters of origin for the wood they sell without long bureaucratic processes.

With regards to the private sector, KWLM does not seek to influence policies and practices directly. Rather the cooperative's social business model and certified wood products are its selling points for private sector partnership. KWLM offers traceability, chain of custody and a transparent system. As noted above, KWLM sells certified wood to six private companies. The demands are currently much higher than what KWLM can manage to deliver and are constrained by cash flow. KWLM has not been able to negotiate terms of payments and often has to deal with delayed payments.

### 5.2.5 Civil Society Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in Chapter 3. In this section we describe how KWLM is coping with that context.

Timber certification and verification has received greater attention of the Government of Indonesia and the global market. KWLM has responded well to this situation, gaining FSC certification and responding to in-country development in the area of certification. KWLM is in the position to promote the benefits of certified timber to the community and provides farmers with a link to the global market. These conditions have been favourable for KWLM whose mission is to support sustainable community logging while ensuring forests are conserved. KWLM plans to diversify its products, expanding from just providing raw, unfinished timber to furniture production.



## 5.3 To what degree are the changes attributable to the Southern partners?

### 5.3.1 Smallholder farmers are organised to produce certified, legal timber

KWLM was not selected for in-depth process-tracing. The evaluation team was able to identify one outcome achieved in the period up to 2014 for quick process-tracing. This outcome is: "Smallholder farmers are organised to produce certified, legal timber". The indicators for the achievement of the outcome are the increased number of KWLM members and the access to six local buyers who are willing to pay the premium price for certified timber.

During the period of 1980-2007, individual logging was a common practice by communities spread around 17,000 hectares of forest area in Kulon Progro district[20]. This kind of forest management practice endangered the sustainability of forest areas since there was no standard for logging and made community members were reliant on middlemen. KWLM introduced the concept of community forest management in after a pilot supported by Telapak Foundation in Sulawesi was proven to be successful.

[20] Overview of KWLM. Didi Sutadi, "Pemenang Community Entrepreneurs Challenge (CEC) Wave III", *NihDia.com*, 25 March 2013. Available from http://www.nihdia.com/2013/03/25/pemenang-community-entrepreneurs-challenge-wave-iii/ (accessed 20 December 2014)

Map of Community Forest in Kulonprogo (KWLM)

Cooperatives in the Indonesian context are generally seen effective means to engage and organize communities as it combines social and economic interests. Since KWLM was founded in 2009, its membership base has grown from 322 people to 903 in March 2012, and 1,207 in 2014. Another 1,100 people are interested in joining the cooperative, but have been wait listed. Having more members is considered an indicator of the outcome's achievement because it means that sustainable community logging practices are taking root and spreading. KWLM has also expanded its interventions to a new sub-district (Nanggulan) following success in Samigaluh, Kalibawang and Girimulyo. As explained in other sections of this report, KWLM has had problems with internal cash-flow and has yet to accept more of the wait-listed members[21]. KWLM is still trying to increase their capital from accumulated profits so that it can accommodate more people in the area. Nonetheless, there is evidence for a high level of interest amongst smallholder farmers to join the cooperative. The government has also been interested in KWLM's model and has begun to draw from KWLM's experience and technical know-how.

There are three pathways that could explain this outcome. The first attributes the organisation of farmers to the incentives offered by KWLM. The main incentives are a premium price offered for timber and access to savings and loans. The second pathway attributes the outcome to a greater environmental awareness amongst community members of the importance of sustainable forest management practice. In the third pathway, the outcome is explained by government support for community forest management.

*Information that confirms or rejects the pathways:*

1. Pathway 1: KWLM offers incentives for smallholder farmers to participate in sustainable timber harvesting

KWLM has received two types of certification for the production of legal timber. The first is FSC certification for chain of custody received in 2011 and valid up to 2015. The second is SVLK certification, which KWLM secured in 2012. The costs for certification were covered with Hivos support. This certification provides the basis for KWLM to sell timber at a premium price, and in turn it can offer financial incentives to smallholders interested in joining the cooperative.

*Information that confirms pathway 1:*

Cooperative members earn up to IDR 300,000 more for each cubic meter of certified timber they sell to KWLM. Based on interviews with the cooperative staff and members, middlemen can only offer between IDR 2.8 to 3 million for the same amount of timber that KWLM buys for IDR 3.3 million. KWLM offers better prices for timber products, especially when the location of the logging is near the main road. This is a clear financial incentive for smallholders to join the cooperative. External sources

[21] The target as stipulated in the proposal was 2,600 but "accepting more members means that they have to be able to provide cash for the credit to their members" (interview with KWLM Director", MFS-II evaluation 2014).

also confirm that one of the selling points of KWLM has been that it can offer 30-40% higher prices than middlemen[22].

Other than the premium price, cooperative members also appreciate KWLM's transparent price calculations and the ease of transactions. When smallholders sell through the cooperative they obtain a documented calculation and a receipt of payment. When cooperative members are ready to sell their timber, they only have to call or send a message to KWLM, and the cooperative organizes the rest.[23]

The second incentive that KWLM has offered is the improvement of access to financial credit. Prior to KWLM's interventions, trees were cut and sold when community members needed cash urgently. Middle men would be able to offer cheap prices for the timber. Interviews with KWLM and cooperative members revealed that the ability to access savings and loans through a non-monopolized system has been another motivation to join the KWLM. KWLM works with a local credit union, CUKATA to offer loans to its members. Smallholders are able to offer their trees as collateral and can now save money, which is paid out annually to the members. This information was confirmed by the Tosari sub-district leader. Cooperative members are able to benefit from better financial management and no longer have to resort to cutting their trees when a family member falls ill or when they need to pay school fees. Rather, they can save money through the credit union. The bigger their saving, the larger annual benefits they receive at the end of the year.

*Information that rejects pathway 1:*
Through KWLM's system, only four types of wood can be certified, purchased, and resold to retailers, furniture producers or wood exporters. This means that not all types of wood produced by smallholders can be bought at better prices.

KWLM reported in their annual reports to Hivos that membership was not growing according to expected targets due to the fact that community members could not comply with expected requirements. Some of these requirements require potential members to spend money to obtain the right documentation proving their land ownership. This means that while there are financial incentives for joining the cooperative, there are also disincentives.

The management team of KWLM mentioned that it cannot accept 1,100 wait-listed potential members because of cash flow problems. The issues with cash flow have also affected the satisfaction of cooperative members who told the evaluation team that payments are sometimes being delayed.

2. Pathway 2: Community members take up sustainable logging out of a concern for the environment
Community awareness plays an important role in stopping illegal logging practices and in efforts to promote reforestation. Deforestation, climate change and global warming are well-broadcasted issues. Data shows that KWLM conducted outreach/socialization in 4 sub-districts.

*Information that confirms pathway 2:*
According to written reports and documents, KWLM invested in undertaking regular socialization meetings to promote community logging in their targeted villages. Socialization covered more than 81 hamlets. Although the main purpose was to attract new members, KWLM's vision and mission (which is to promote sustainable forest management) were spread by these activities. Also, new members, upon joining KWLM undergo orientation on sustainable community logging so that they comply with cooperative standards and certification standards.

Cooperative members interviewed confirmed that their villages were much greener than a couple of years ago. They are aware of the importance of conserving forest areas as a means to sustain their future livelihoods. One cooperative member interviewed said that what motivated him to plant more was that one day he would get a return on his investments. Conservation is thus being seen as a means to secure future financial opportunities.

[23] Interviews with Wagiman and Suradi, member and field facilitator of KWLM, MFS II evaluation 2014

KWLM applies a system through which it offers ten free seedlings for every tree sold by cooperative members. This stimulates cooperative members to plant more trees. In addition, trees must be a minimum of 20-25 cm (depending on the species) to be cut. These Standard Operating Procedures (SOP) help ensure that forests are conserved[24].

KWLM's efforts to combine 'environment' with 'enterprise' have been recognized by the Arthur Guinness Fund and the British Council in March 2014 (KWLM won an award "Community Enterprise Challenge Wave III" for 2013)[25]. KWLM was acknowledged for creating awareness among community members of the importance of protecting natural resources.

*Information that rejects pathway 2:*
The evaluation found limited rejecting evidence. There was no indication of illegal logging activities going on in the area, and no media reports were found of such cases. A study conducted by Syahadat (no year)[26] revealed that unorganised initiatives undertaken by communities to manage forests have led to poor forestry practices that are unsustainable and do not produce optimum product revenues.

None of the cooperative members interviewed mentioned concern for the environment as their primary motivation for joining KWLM.

Cooperative members interviewed said that KWLM sometimes 'persuaded' them to sell their timber even though they had rather wait. This is because KWLM had to fulfil orders from their buyers. These practices go against sustainable logging practices and counteract the conservation messages promoted by KWLM.

3. Pathway 3: Government support for community forest management promotes smallholder organisation

*Information that confirms pathway 3:*
The Forestry Law No.41/1999 stipulates that the government supports community logging and forestry. It provides the basis for government recognition of community-based forest management schemes.

The long-term development plan of Kulon Progo district (2005-2025) recognizes the function of communities in managing forest areas and pays special attention to improving the management, conservation and utilization of natural resources in the Menoreh area[27] where KWLM works. The District Government of Kulon Progo has expanded the area of community managed forests from 18,731.97 hectares in 2010[28] to 20,177.69 hectares in 2013[29]. This expansion is important because it reflects stronger measures to defend the interests of communities dependent on forests for livelihoods and at the same time recognizes the need to conserve forest areas.

KWLM developed a five-year forest management plan (2010-2014) with a projection that the cooperative would manage up to 5,000 hectares of land. Based on this assumption, KWLM has calculated annual allowable cuts or AAC (jatah tebang tahunan/JTT). Every year, KWLM proposes AACs to the Forestry Department of Kulon Progo based on their latest inventory.[30]

[30] Menoreh Sustainable Wood, "Penghargaan dari The British Council". Available from https://menorehwood.wordpress.com/ (accessed 21 December 2014)

*Information that rejects pathway 3:*
While the local government has been supportive of community forest schemes on paper (through policies, for example), they lack technical know-how on how to implement sustainable community logging. This is evident from the fact that they have requested KWLM's support to provide trainings and are also replicating KWLM's timber/forest inventory system.

According to the local parliament, the government of Kulon Progo has not invested sufficiently in developing farming, forestry and plantation opportunities that exist in the Menoreh Mountain area[31].

*Conclusion*
Based on the available data and information, we conclude that all three pathways form a causal package to explain the achievement of the outcome" Smallholder farmers are organised to produce certified, legal timber". KWLM's certification service and transparent timber price calculation are attractive for community members as it gives certainty and better prices for timber products. Pathway 1 is *sufficient* but not *necessary*, while pathways 2 and 3 are *necessary but not sufficient* as it requires pathways 1 to be able to explain the outcome. The package offered by KWLM is primarily grounded in economic incentives, which has also successfully introduced sustainable forestry practices as communities become aware of the importance of maintaining forests for their future livelihoods. Government policies and efforts provide an enabling environment in terms of legal framework and supportive relations.

## 5.4 What is the relevance of these changes?

### 5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

In the 2011 Theory of Change (ToC), KWLM's main goal was the development of a prosperous and autonomous forest-dependent community. In order to reach these objectives, KWLM identified a number of conditions, which were: 1) delivery of good services; 2) community environmental awareness; 3) support from the public sector and 4) capacity to access markets. The main assumption was that environmental sustainability and economic resilience had to be linked through sustainable management of forest resources.

Since the baseline, KWLM has not altered its ideas and intervention strategies. The cooperative's main service consistently provided has been its FSC and SVLK certification. In addition, KWLM has facilitated links to savings and loans provided through a credit union. Support from the public sector, although beneficial has not been a necessary factor for the achievement of the outcome. Rather, it has expanded KWLM's scope of service delivery to government officials in the Forestry Department and aided its ability to provide seedlings to community members as compensation for every tree cut, as well as a means to promote environmental values. While certification has opened access to a niche market, KWLM's capacity to access markets hinges on its ability to fulfil market demands and identify potential buyers. It is in this last area, which is probably the most critical of the preconditions that KWLM has struggled. KWLM's supply of timber is dependent on the production of its members, from whom it buys wood to be resold. Membership has not increased because of cash flow issues. This means essentially that KWLM has not yet found a balance between supply and demand based on available capital.

Regarding community environmental awareness the indicator was that members practice the standard operation procedures in conducting community logging. The evaluation has found that there have been cases when community members have been pressured to sell wood before reaching the ideal diameter so as to fulfil orders. In essence this goes against the very ideals that KWLM has set for itself as an organisation.

### 5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

The interventions and results of KWLM have been relevant both to the local context as well as to current policy directions of the government.

Within the Province of Yogyakarta, Kulon Progo District has the second largest forest area with just over 60 percent (2013) classified as 'hutan rakyat', or community forest[32]. Many timber products in Yogyakarta come from the District. Deforestation in the area has been polemic since the 70s and reached its peak in 1999[33]. This has led to landslides and the loss of ground water resources. Past logging practices have not been sustainable and have caused overexploitation as well as economic inefficiency. According to KWLM, timber production for an area of around 8,000 hectares should be 77,000 $m^3$, but has reached 234,000 $m^3$, far exceeding sustainable logging standards[34]. As a country, a new study released in 2014 suggested that Indonesia has the highest deforestation rates globally[35]. According to National Statistic Agency (BPS), there are around 14.1 million (2006) forest-dependent communities. For them, community logging is their main livelihood, as it is in Kulon Progo where KWLM works.

In recent years, the District has sought to address deforestation, which was taken up in its Long (2005 – 2025) and Mid-Term (2011-2016) Development Plans. The local government set targets for the expansion of 'hutan rakyat', which were surpassed in 2013[36]. These developments are in line with national policy directions.

The Indonesian government established bilateral cooperation with the European Union through a Voluntary Partnership Agreement (VPA) with the aim to improve forest sector governance and ensure exported timber is legal. To support the implementation of this bilateral cooperation, the Government of Indonesia issued standards and guidelines for sustainable forest management and timber verification in 2009 and 2011, imposing a mandatory certification system for forestry businesses[37]. By 2012, there were 202 businesses or units holding certification[38], KWLM being one of them. In 2014, the Indonesian timber certification and verification system was accepted by the European Union.

KWLM introduced community-based forestry and logging standards to help local farmers address the above issues within the existing regulatory framework. KWLM's promotion of sustainable community logging and access to premium markets is also in line with the momentum gained for REDD+ initiatives. Illegal logging is of relevance to REDD+ because it is an important cause of deforestation and degradation and sustainable forestry management is a priority for REDD+ mechanism[39].

### 5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

The interventions of KWLM fall under the Green Entrepreneurship programme of Hivos. This programme area, Hivos' largest globally, focuses on "enterprising men and women as catalysts for green socio-economic progress"[40]. Hivos considered KWLM as a farmer-based cooperative that has

[40] "Hivos Business Plan 2011-2015", Hivos, p. 21

strong concern on the environment and employment aspects[41]. In Hivos' 2008 Vision Paper on Civil Society Building, Hivos states that, "In the economic domain it is civil society's role to counterbalance short-term profit policies, and to struggle for long term production policies which are socially and environmentally sound."[42] As such, Hivos supports activities related to market participation since it contributes to fairer economic relations.

One of the motivations for Hivos' support to KWLM was its initiative of combining the 'business' and 'environment' into programme, a relatively new approach for producers organisations in Indonesia. By supporting KWLM, Hivos intended to improve the bargaining position of farmers in order to improve their welfare. In order to achieve this Hivos supported the organisation of farmers into groups or cooperatives to improve their collective capabilities and confidence to engage and link with other stakeholders, such as buyers. Hivos considers cooperatives to be democratically-run and controlled by its members allowing economic benefits to be distributed proportionally, whilst offering a means to sustain without a continued reliance on external donor support.[43]

## 5.5 Explaining factors

### 5.5.1 Internal factors

The Hivos-supported activities do not seem sufficient to achieve the identified outputs and outcomes. Project activities were focused on three big issues: environmental education (called "socialization"), inventory of potential timber supply, and the process of certification. These do not describe how more certified timer will be sold or how this will contribute to an expansion of market, which in turn is meant to lead to increased incomes and incentives to attract more members to the cooperative. These kind of activities require a large proportion of the budget to cover salary costs as well as inventory. Other inhibiting internal factors seem to have been challenges at the human resource level, especially with regards to business and financial management skills. The evaluation team finds that the problems with cash flow are an illustration of these challenges.

Supporting internal factors mainly related to KWLM's ability to bridge the communities they support to the private sector. KWLM is in a strategic position both in bridging the communities with private sectors and well as being a frontline service provider. They have offered good incentives for cooperative members which include a 'cash and carry' mechanism of payment, better prices for timber, free seedlings for timber rejuvenation, and linkages to a local credit union, CUKATA. This credit union shares the same founding father as KWLM. This personal link has been the basis for a cooperative relationship. Last, as an organisation with a local basis, KWLM benefits from close day-to-day interaction with the farmers. This, in combination with the incentives they have offered and the extensive socialization, has been important for building trust.

### 5.5.2 External factors

The global market for certified timber products has been one of the driving forces behind the government's renewed interest in sustainable forest management. The increased demand resulted in an expansion of areas certified under the Forest Stewardship Council (FSC), from 833,000 hectare in January 2011 to 1,679,117 hectares in July 2013[44]. The Government of Indonesia's own standards on the legality of timber origins (SVLK) has also strengthened the demand for timber certification of community logging enterprises. KWLM who has both FSC certification for chain of custody and SLVK certification created an incentive for the community to take up sustainable management practices.

[41] "Kenschets KWLM", Hivos, 2010

Smallholder farmers on their own would not have been able to apply for certification without KWLM's assistance.

### 5.5.3 Relations CFA-SPO

Prior to 2010, KWLM had received support from Hivos through a micro-fund project. Through this support KWLM was able to benefit from improved skills and knowledge in forest management, support for the official registration of the cooperative, and supporting FSC certification. However, in the second period of collaboration Hivos was unable to provide direct financial assistance to further enhance staff and member capacity[45] but hired Telapak as a consultant to provide capacity building on sustainable forestry and business development to KWLM. Telapak's support was key in obtaining FSC certification. Of note is that Hivos did not continue its partnership with KWLM after the project closed in 2012 because of a new programmatic emphasis on sustainable food production.

# 6 Discussion

## 6.1 Design of the intervention

The design of KWLM's interventions did not focus on improving forestry laws and regulations as a means to promote community participation in sustainable forest management. Rather, the focus was on creating a market-oriented instrument through timber certification as a way to bring about more responsible and sustainable community logging. The cooperative model was considered as an institutional tool to garner small-holder participation in the market.

While there is renewed interest in cooperatives as a means to organize farmers, this model has also received criticism. Empirical research on agricultural cooperatives has found that the poorest farmers are the least likely to participate, suggesting that agricultural cooperatives can be rather exclusive[46]. Studies also show that reducing poverty through the cooperative model hinges on inclusion and effectiveness, and that long-term impacts of membership on poverty reduction are rarely monitored or analysed[47]. The evaluation team found that KWLM's membership is not inclusive and that insufficient interventions are undertaken to support entry into the cooperative. KWLM reported that community members were finding it hard to comply with requirements for cooperative membership, but there is no evidence that KWLM addressed the issue. Women's membership remained low, and did not reach the target of 30 percent set at the start of interventions in 2010.

With regards to effectiveness, KWLM's interventions were focused on four areas: 1) socialization, 2) inventory, 3) nursery development and 4) certification. These activities focused more on ensuring that market demands were met rather than direct actions to assist farmers. What was missing in the design was a focus on ensuring a sustainable supply chain, building skills to ensure better cash flow, and providing marketing and business development training for cooperative members. KWLM has not yet found a way to deal with the payment systems applied by buyers, which requires KWLM to have sufficient financial capital to purchase timber from cooperative members up front for which buyers pay for fully upon delivery of the full order of timber.

It is useful to compare KWLM to Koperasi Hutan Jaya Lestari (KHJL), the first community forest group in Indonesia to achieve FSC certification in 2005. During the start-up phase KHJL members were provided intensive training and support on management practices for teak wood. Farmers also benefited from direct capacity building on wood quality, meeting contract commitments and consistency of supply. Intensive monitoring was conducted to ensure production did not surpass community capacity. Members were provided with start-up, no-interest loans that helped them fulfil FSC requirements, particularly obtaining letters/documents to prove land ownership and other permits.[48] KHJL also profited from the support of The Forest Trust, an organisation with extensive links to international factories and buyers[49].

The elements described above were to a large extent missing in KWLM's interventions. What both cooperatives do have in common is that FSC certification brought them credibility and recognition from the local government. In addition, both KWLM and KHJL worked to organise farmers so that timber could be sold collectively at premium prices. Costs for initial certification were in both instances covered by external donor support.

---

Bioeconomics Working Paper Series. Working Paper 2014/2. Available from http://ageconsearch.umn.edu/bitstream/164803/2/BioeconWP_2014_2.pdf (accessed 18 January 2015)

[47] Ibid

[48] Barr, Robin. 2007. The *Role of Small and Medium Forest Enterprise Associations in Reducing Poverty*. FAO Corporate Document Repository. Available from http://www.fao.org/docrep/010/ag131e/ag131e24.htm (accessed 18 January 2015)

[49] Forest Stewardship Council, "Successful Forest Cooperative in Indonesia", January 2013. Available from https://ic.fsc.org/preview.indonesia.a-614.pdf (accessed 18 January 2015)

Essential ingredients for replication of similar interventions as well as sustained success can be summarized as below. These draw both on findings from KWLM and KHJL, as well as general ingredients required for sustainable interventions:

1. A greater focus on building the capacity of farmers;
2. Working within the production capacities of the farmers;
3. Certification costs and salaries need to be factored into the production, sales and profit calculations;
4. Supporting farmers with loans to fulfil FSC or cooperative entry requirements, thus enabling farmers with less capital to participate;
5. Where funds are available, develop interventions that also benefit non-members, especially if membership requires proof of land ownership, which can lead to exclusion of women and poorer farmers;
6. Collaborate with organisations that have links to international markets, especially where national markets are insufficient;
7. Continue to provide premium prices for timber. This contributes to a decrease in illegal logging as well as encouragement for reforestation;
8. Explore and support value added businesses, such as furniture production;
9. Monitor how collective actions through the cooperative model are leading to economic benefits, and;
10. Ensure democratic principles are held up by the cooperative.

# 7 Conclusion

KWLM's 'Community-based Local Economic Development through Sustainable Forest Management' Project supported by Hivos has successfully expanded the opportunities for smallholder farmers to produce certified timber. Certification has allowed small holders, organised by KWLM through a cooperative model, to collectively participate in markets that offer a better price for timber sourced in sustainable ways. While better prices are the main incentives that have resulted in an expanded cooperative membership, community members have come to adopt more environmentally sound logging practices as they understand that future income will depend on maintaining prized forest resources. In addition, KWLM has offered other services to cooperative members to assist them in reforestation and also to become less dependent on middle men who in the past monopolized timber prices. The linkage with a local credit union has been one of the key explaining factors to their ability to attract more small holders.

Hivos support was critical in allowing KWLM to obtain certification from FSC as well as Indonesia's SVLK certification. The services offered by KWLM has resulted in an increase in membership has grown from 322 in 2009, to 903 in 2012 and now consists of 1,207 members. This means that even after Hivos' support ended in November 2012, KWLM continued to expand to engage more smallholders. While these smallholders are benefitting economically from KWLM's support, it should be noted that the stringent standards of certification have also prevented landless and women farmers from directly participating in the scheme. KWLM's efforts to support these groups through the development of other agricultural products has not been successful.

Nonetheless, the changes related to growth of sustainable community logging are relevant to the context in which the SPO is operating in. Global market demands have pushed for timber products to be traceable and sustainably harvested. KWLM is able to participate in this market by creating linkages with local private sector actors. The local government has also demonstrated an interest in KWLM's systems and approach.

Hivos' support has helped to finance FSC certification, which is valid until 2015. It is unclear whether KWLM will try to extend its certification beyond this period, but if it does, this will have financial implications. Moreover, despite KWLM's success, the SPO still faces challenges in maintaining a proper cash flow system. Cooperative members, while still satisfied with KWLM, have started to voice complaints over late payments. KWLM is trying to address matters, but it may need further technical assistance to ensure the issues are fully addressed. In order for the cooperative's interventions to remain relevant to its beneficiaries, it will need to maintain is capacity to manage financial lows, markets, and continue with transparent business practices.

Table 6

*Summary of findings.*

| When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements? | Score |
|---|---|
| The CS interventions were well designed | 5 |
| The CS interventions were implemented as designed | 5 |
| The CS interventions reached their objectives | 6 |
| The observed outcomes are attributable to the CS interventions | 6 |
| The observed CS outcomes are relevant to the beneficiaries of the SPO | 7 |

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

# Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration
- 1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

| Dimension | | Indicators | Question | Change |
|---|---|---|---|---|
| Civic engagement | 1 | Needs of marginalised groups | How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies? | +1 |
| | 2 | Involvement of target groups | What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities? | +1 |
| | 3 | Political engagement | How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups? | 0 |
| | | | | |
| Level of organisation | 5 | Relations with other organisations | In the past 12 months what has been the most intensive interaction you had with other CSOs? | 0 |
| | 5 | Frequency of dialogue with closest CSO | In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with? | -1 |
| | 6 | Defending the interests of marginalised groups | Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs? | +1 |
| | 7 | Composition current financial resource base | How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking? | -1 |
| | | | | |
| Practice of Values | 8 | Downward accountability | To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them? | 0 |
| | 9 | Composition of social organs | What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for? | 0 |
| | 10 | External financial auditing | How regularly is your organisation audited externally? | 0 |
| | | | | |
| Perception of impact | 11 | Client satisfaction | What are the most important concerns of your target groups? How do your services take into account those important concerns? | +1 |
| | 12 | Civil society impact | In the past 12 months, what impact did you have on building a strong civil society? | +1 |
| | 13 | Relation with public sector organisations. | In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives? | 0 |
| | 14 | Relation with private sector organisations | In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective? | +1 |
| | 15 | Influence upon public policies, rules, regulations | How successful have you been in influencing public policies and practices in the past 2 years? | +1 |
| | 16 | Influence upon private sector agencies' policies, rules, regulations. | How successful have you been in influencing private sector policies and practices in the past 2 years? | 0 |
| | | | | |

| | | | | |
|---|---|---|---|---|
| CS context | 17 | Coping strategies | In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society. | +1 |

# Appendix 2 Changes in civil society indicators between 2012 and 2014

## 1. Civic Engagement

### 1.1. Needs of marginalised groups SPO

Since the baseline, KWLM has expanded its support to one new sub-district, Nanggulan following the success in the sub-districts of Samigaluh, Kalibawang and Girimulyo. This means that its interventions cover more people now compared to the baseline. In 2012, KWLM reported that it had a total of 903 members in three sub-districts. By the end of 2014, membership had expanded to 1,207 people. In addition, there are 1,100 people who are 'wait-listed' to become new members. However, due to internal cash-flow problems within KWLM, the cooperative has not yet been able to accept a further expansion of its membership base[50]. According to the director, KWLM is still trying to increase its capital from accumulated profits so that it can accommodate more people in the area.

KWLM's members consist mostly of farmers that own their own land. KWLM has provided some support to marginalised or landless households in the area through interventions in the area of herbs and spices, vegetables and other agricultural products. However, these products are not the core business of KWLM.

Female membership in KWLM is much lower than male membership. Just 243 women are members, which constitutes 20 percent of the total membership. This is partially explainable by land registration practices and Islamic Law. The latter prescribes rather complicated rules for the division of property, and generally sons inherit twice as much as daughters[51]. On Java, land certificates are more frequently issued in the names of men (65% as of 1998) rather than women (30%), and only a small portion of households in Indonesia have joint or multiple names registered (5%)[52]. Land rights are generally only titled to women if she owns separate property, while marital property is in the name of the husband[53]. KWLM's eligibility requirements oblige members to own land enabling them to produce timber. In addition, the involvement of women in timber production is so limited because KWLM utilizes farmer's groups as a means to incite participation, which tend to be dominated by a patriarchal culture. Although KWLM's herb business mostly covers women beneficiaries, there is little indication that this business is sustainable or has produced recent results. KWLM used to work together with STPN for the production of herbs and processed food with women members, with STPN providing capacity building support to women. Unfortunately, KWLM and STPN have not been able to find buyers for the products.

### 1.2. Involvement of target groups SPO

Qualitatively, the involvement of target groups has improved. At the start of KWLM's initiatives, Telapak Foundation, as the 'father' of KWLM, intensively supported the newly set up cooperative which had minimal management and organizational skills. The current director, who is also a member of Telapak Foundation, is still the main actor running the cooperative. But compared to the baseline, the

[50] Interview with KWLM Director, MFS-II evaluation 2014

[51] Brown, Jennifer. 2003. *Rural Women's Land Rights in Java, Indonesia: Strengthened by Family Law, but Weakened by Land Registration*. Pacific Rim Law and Policy Journal Association, Vol. 12 No. 3, pp 631–651. Available from https://digital.law.washington.edu/dspace-law/bitstream/handle/1773.1/737/12PacRimL%26PolyJ631.pdf?sequence=1. (accessed 15 January 2015)

[52] Ibid

[53] USAID. 2010. *USAID Country Profile – Property Rights and Resource Governance: Indonesia*. Available from http://usaidlandtenure.net/sites/default/files/country-profiles/full-reports/USAID_Land_Tenure_Indonesia_Profile_0.pdf (accessed 15 January 2015)

other management team members who previously knew very little about how to run a cooperative have strengthened their knowledge, skills and have broadened their networks. From evaluation team's observation during the end line workshop, cooperative staff are more confident than in 2012 and are able to speak up for themselves[54]. The director has delegated the tasks of dealing with new buyers, public relations with universities or other cooperatives, and the tree inventory (taking GPS coordinates that are then shared with the local Forest Department) to other staff.

The evaluation team did not observe any significant changes in the involvement of cooperative members in decision-making. Members fulfil a crucial role in certification of wood since they supply FSC certified timber.

### 1.3. Intensity of political engagement SPO

There is no significant change in the last two years in the area of political engagement. KWLM staff can still be considered as 'activists' in the agriculture and food security sector but there is no change in the intensity of individual staff or the organisation itself in participation in locally elected bodies. The organisation remains politically independent. KWLM continues to focus on improving conditions for farmers, making political engagement less of a priority unless farmers' issues require such. Political engagement of cooperative members is forbidden.

## 2. Level of Organisation

### 2.1. Relations with other organisations SPO

In general, the relations between KWLM and other CSOs remain the same since the baseline. KWLM's closest relations with organisations working on similar issues are connected to the Hivos network. At the national level they continue to engage with Telapak, Samdhana Institute and PT Poros Nusantara Utama (PT PNU). Relations with Telapak are characterized as being less dependent since the organisation no longer provides intensive capacity building support. Telapak does still represent KWLM at the national level as KWLM's umbrella organisation.

As mentioned before, KWLM still works together with STPN to provide female members of the cooperative with trainings and technical assistance.

Previously KWLM also worked together with Yabima, however, since the death of its founder, the organisation has become inactive. KWLM's director reported that it has been difficult for KWLM to exand its local networks since there are not many CSOs or cooperatives in the area working on the same issue, i.e. legal timber production[55]. As such, KWLM collaborates more with other cooperatives or credit unions working in the same sub-districts. One of its closest relations is with Koperasi Kredit Tali Asih (or CUKATA), established in 2002. Both share the same founder (Bernadaus Sad Windratmo)[56] as well as members[57]. CUKATA functions to provide credit, while KWLM focuses on sustainable forest management. But both cooperatives share a vision that conservation is not just about the environment, but about providing economic sustainability and upholding traditional and cultural values[58].

[54] The baseline reported that members were involved in the consultation, but the management provided the framework, defines the problems and provide solutions. For projects with donor, the involvement of members and non – members is even lesser.

[57] Community Logging, "Pertemuan Refleksi dan Koordinasi Gerakan Community Logging Part 1", 13 March 2013. Available from http://bumi-sajagad.blogspot.com/2013/03/pertemuan-refleksi-dan-koordinasi.html (15 January 2015)

[58] KulonprogoNews, "Dua Koperasi di Kulonprogo Sambut Masa Panen Padi", 11 June 2014. Available from http://kulonprogonews.com/news/dua-koperasi-di-kulonprogo-sambut-masa-panen-padi/ (accessed 15 January 2015)

## 2.2. Frequency of dialogue with closest civil society organisation SPO

The collaboration and cooperation between KWLM and Telapak has become less routine compared to when the cooperative was newly established. In 2012, there was an annual meeting between KWLM and Telapak to discuss project progress and adjustments needed in its strategy[59]. In 2013, KWLM held a national consolidation meeting with its network. There is no evidence of joint initiatives between the two organisaions in 2014.

KWLM's most frequent dialogue is with CUKATA because they share the same founder and work in the same sub-districts. As mentioned above, both cooperatives share the same members but intervene in different issues and provide different kinds of support to members[60].

## 2.3. Defending the interests of marginalised groups SPO

KWLM's strategy in defending farmers' interests remains the same compared with the baseline, but in terms of quantity, the numbers have increased. KWLM supports farmers to defend their interests through:

1. Encourage conservation by planting more and more trees: KWLM provides 10 seedlings to cooperative members each time they cut a tree. Members are not allowed to cut trees under a certain age.
2. Better financial capacity (through a savings and loans mechanism): Before joining the cooperative, members tended to cut trees whenever they needed money to fulfil their needs. Middle men would take advantage of the need for cash by buying up wood cheaply. Now cooperative members can take out loans, using their trees/wood as collateral.
3. Increased earnings from premium priced wood. KWLM offers IDR 300,000 more per meter cubic of teak wood compared to middle men.
4. Price transparency and clearer market prospects: producers are now more aware of the value of their products.
5. Broadened network: There are many university students now doing research in KWLM target locations about certified wood for their thesis or dissertations. This has helped 'spread the word' about KWLM since many of the resulting works are available on the internet. ICCO has agreed to provide a loan to KWLM through its credit union.

While the community logging project is exclusively for farmers whose land, KWLM has been trying to address the interests of landless farmers through herb and spices, vegetables and other agricultural products.

KWLM sees itself as a social business because it seeks to address problems faced by farmers. According to KWLM, the position of middlemen has become less dominant. It also claims to have contributed to a decrease in illegal logging activities by offering income generating activities through legal timber.[61]

## 2.4. Composition financial resource base SPO

KWLM is still struggling to diversify its funding sources. KWLM still relies in the first place on donor grants for promoting community logging. Post-Hivos support (which ended in 2012), KWLM has not been able to attract other donors. Hivos chose to work with cooperative models as a means to sustain the delivery of services to their members[62]. Although its scheme is promising, KWLM has problems

[59] Interview with KWLM executive, MFS II evaluation 2014

[60] According to an online source, in January 2015, Cukata had 1,439 members and KWLM had "more than 1,000" members. It is unclear how many of the members overlap.
Wahyu Tri Atmojo, "Koperasi Wana Lestari Menoreh dan Koperasi Cukata", *PLUT-KUMKM*, 15 January 2015. Available from http://www.plutjogja.com/koperasi-wana-lestari-menoreh-dan-koperasi-cukata/ (accessed 15 January 2015)

[61] Gustyanita Pratiwi, "Konglomerasi Sosial a la Perkumpulan Telapak", *SWA*, 9 November 2012. Available from https://swa.co.id/entrepreneur/konglomerasi-sosial-a-la-perkumpulan-telapak (accessed 15 January 2015)

[62] Miranda, PO Hivos GE Portfolio

with cash flow, which has limited their ability to expand their business, and in turn has affected member satisfaction. KWLM's scheme is for certified wood to provide income to fund KWLM's activities, assuming that buyers, who are mostly furniture export companies, are willing to pay a premium price. These buyers often pay out the full amount once they receive the wood from KWLM. In the meantime, KWLM pays out its members individually. This means that there is a gap from the time when KWLM purchases the wood from its members to when it receives payment from the furniture companies, who sometimes do not pay on time. The issues with cash flow have restricted a further expansion of members. Members have also complained that KWLM has started to make late payments to them.

In the current condition, KWLM needs IDR 2.4 billion to buy wood from its member. Their current reserve is just IDR 300 million and buyers' down payment of IDR 600 million IDR. They fall short of IDR 1.5 billion in reserves to purchase wood from its members until they receive the full payment from buyers. To cope with this, KWLM has tried to borrow money from various sources, one of which being a soft loan from ICCO, secured in December 2014. Inevitably, they are found in a position where they often have to postpone payments to members.

Another challenge with KWLM's cash flow problem is that most timber producers tend to sell in certain periods (Ied Mubarak, for instance), such that KWLM has to ensure that it has sufficient reserves for months when transactions are high.

# 3. Practice of Values

## 3.1. Downward accountability SPO

KWLM is governed by cooperative principles in the decision-making process and how they run their business.

In Indonesia, the ultimate goal of a cooperative is the welfare of its members. In other words, while it may be a profit-making entity, its services and capital benefit its members. Economic benefits are distributed proportionally to members based on their level of participation in the cooperative. Cooperatives have an important social function since they mobilize members for a common interest.

There has been no change in the downward accountability of KWLM, as it remains accountable to its members as in 2012. Cooperative members are informed of the financial conditions and have the right to inquire with the cooperative on these issues or to express their ideas in the general assembly. During annual general assemblies, members are guaranteed equal rights and voice. Cooperative members are also aware of the prices and the volumes of wood sold to the cooperative. KWLM also discloses the price of the wood sold to its buyer and the profit-sharing mechanisms with its members. The same system has been applied in the cooperative since the beginning, so nothing has changed in the way KWLM applies accountability.

## 3.2. Composition of social organs SPO

There is also no change in the composition of KWLM's social organs. The 20 founders of KWLM and the majority of the management of the cooperative are an 'elite group'. This is illustrated by the fact that only community members who own land can apply for membership, while landless farmers are excluded from joining the cooperative. These power relationships have not changed.

KWLM has an effective separation of authority between the executive and the regulatory body. The highest authority is the General Assembly that meets every 3 years or less if needed. Underneath it is the Governing Body and the Board of Supervisors, as well the Executing Agency with its Director. Each organ's rights and duties have been drawn up in detail in the bylaws (AD / ART). However, most strategic discussions are still dominated by the Chairman. Because the Hivos grant was managed separately, most members did not know about its administration.

From the baseline, up until now the composition of the social organs of KWLM remains the same. KWLM is open for women members but the numbers of women are still limited.

### 3.3. External financial auditing SPO

The cooperative has never been audited externally, although in their budget proposal KWLM allocated IDR 20,000,000 for an organizational audit[63]. This situation is similar with the baseline where the external audit was conducted at the request of Hivos. Also, the administration of the Hivos grant is not subject of the internal procedures of the cooperative and as such are not discussed in the General Assembly or consolidated in financial reports.

## 4. Perception of Impact

### 4.1. Client satisfaction SPO

The trend of increasing cooperative members number was identified in the baseline as one of the indicators of success linked to the increased demand for sustainable forest products. The increased membership can be considered evidence of member satisfaction, as does the large number of membership applicants that are still waiting to join the cooperative once cash flows have improved.

Nonetheless, the evaluation team found dissatisfaction from members with regards to the swiftness of payments. During the baseline, one of the key benefits of KWLM identified was its 'cash-and-carry' scheme. However, as mentioned in 2.4, KWLM's current cash flow problem has caused dissatisfaction among some KWLM members[64]. In addition, the evaluation team found that members sometimes are 'persuaded' to sell their wood to KWLM to meet external demands (during months when demand is very high). This is sometimes not in line with aspirations of the members themselves. The benefits described under 2.3 still outweigh these complaints, and as such the evaluation team still rates that there has been an improvement in client satisfaction.

### 4.2. Civil society impact SPO

KWLM gives its members the option to whom they want to sell their timber to, thus providing grounds for a better bargaining position of its members vis-à-vis middle men; and this is a proxy of empowered community groups being able to defend their interests. Before joining the cooperative, community members would sell their trees to the middle men whenever they needed cash. This allowed the middlemen to monopolize prices. Since joining the cooperative, members have learned how to apply financial planning. KWLM has helped them access loans from credit unions when needed. Farmers have become better organised through the cooperative system. By joining KWLM, and following the certification procedure, cooperative members have benefitted economically. They are able to sell their timber to KWLM for IDR 300,000 more than the prices offered by middle men. In addition to this benefit, cooperative members relatively have a better financial well-being compared with non-members as they have access to financial credit, using their uncut trees as collateral for loans. From a sustainable forest management perspective, this mechanism is beneficial to farmers as well as to forest conservation.

As mentioned by a KWLM management team personnel, the cooperative model of KWLM has been replicated in Lampung Province with the assistance of Telapak Foundation. The wood certification system of KWLM was also replicated by the local government of Pasuruan and Ponorogo Districts, East Java. This means that the coverage of services has been both directly and indirectly influenced by KWLM.

[63] "Budget calculations 2010-2012", KWLM
[64] Interview with KWLM Director, MFS-II evaluation 2014

## 4.3. Relation with public sector organisations SPO

There was no significant change in the relation with public sector agencies in the last two years. Since the baseline, KWLM has had conducive relations with district level government offices. The relationship is characterised by mutual interests. For example, the Forestry Department has donated seeds to the cooperatives while KWLM has provided technical expertise to the office through trainings and by sharing its best practices. Other offices with whom KWLM maintain relations with include the Departments for Watershed Management (BPDAS) and the Department of Industry, Trade and Cooperatives (Disperindagkop).

## 4.4. Relation with private sector agencies SPO

KWLM functions as a "good" middlemen and this role requires KWLM to function as a private sector agency to smoothen the relationship with buyers. KWLM managed expand its market since the baseline. There are now 6 furniture companies working with the cooperative. These companies are satisfied with quality of wood supplied by KWLM. Java Furniture, a furniture exporter in Yogyakarta, has become KWLM's permanent buyer. The company actually needs around 24 cubic meters of certified teakwood per month, but KWLM is only able to provide 16. Since the cooperative directly sells the wood to export companies, they are able to obtain a premium price. KWLM has been successful in linking the farmers to larger buyers. Although KWLM has taken up a 'middle man' role, their cooperative mechanism ensures that they are accountable to the farmers and that their activities contribute to improved welfare.

KWLM has tried to seek out partnerships with bonafide and reputable buyers so that payments are settled punctually. KWLM does not sign agreements with companies who do not have clear, continuous demands for certain quantities of wood or do not have secure markets.

## 4.5. nfluence upon public policies, rules, regulations SPO

In the baseline, there was no indicator to show KWLM's influence on policies, rules and regulations in the sector. The project was also not intended to influence public policies and practices, but rather focused on creating a better system of trading and increasing the value of timber, as well as maximizing non-wood products. There is not much evidence in progress reports on lobby and advocacy to influence public policy. However, because of longstanding relations with district authorities, as claimed by KWLM Director, they have influenced district policy through streamlining the certification process at district level. In 2014, KWLM was entrusted by the local government to issue 'origin of wood documents' (surat keterangan asal usul/SKAU). In the past, only appointed local government staff had the right to issue these documents. This permission simplifies the procedures for KWLM to sell wood to other parties. The GPS-based tree inventory system applied by KWLM has impressed the local forestry department, who are now trying to replicate the system. KWLM has also implemented an Annual Allowable Cut (AAC) system or 'jatah tebang tahunan' (JTT) in Kulon Progo District, which has socialized to the local government. AAC is a mechanism that calculates the amount of wood permitted for harvest each year to ensure productivity and sustainability of forests.

KWLM's model has become well known and is an example to the government on how to improve the economic welfare of communities, whilst conserving forest resources and allow communities to manage these resources. The wood certification system of the cooperative has been replicated in Pasuruan and Ponorogo Districts. Recently, the local government issued a regulation obligating all timber production to be certified. The Kulon Progo District Forestry Office has asked KWLM to train the persons in charge of the wood certification system.

## 4.6. Influence upon private sector agencies' policies, rules, regulations SPO

In 2012, KWLM's involvement in improving the position of small scale forest entrepreneurs was still at the stage of initiation, so its influence on the market for timber was still limited. In 2014, the relations of the cooperative with the public sector has broadened in terms of coordination and information sharing, but KWLM has still not been able to influence the private sector agencies' policies, especially the "terms of payment" of its buyers. KWLM has not found a strategy to negotiate with the private

sector for more suitable payment conditions. They often face problems because their buyers are two weeks to two months late with payments, in some cases even later.

# 5. Civil Society context

## 5.1. Coping strategies

In mid-2014, the 2012 Law on Cooperatives was annulled through a Constitutional Court decision. This means that the law currently recognized is the predeceasing Law. No. 25/1992. The revision was welcomed by many as since it protects and support cooperatives as it provides clearer distinctions between cooperatives and corporations. Since the passing of the 2012 Law, the growth of cooperatives had slowed and the former law allowed non-members to inject capital into the cooperatives and take control of cooperatives[65]. The Law did not have implications for KWLM because its main mission is to conserve forest resources and improve the economic welfare of farmers. In addition, KWLM has from the start been run in such a manner that profits of the sales of timber were returned to its members, which is in line with the principles of the 1992 Law.

In 2011, KWLM obtained FSC certification for forest management and chain-of-custody (CoC). FSC is one of the two certification schemes with an international scope. KWLM is one of the 74 CoC holders for logs (Category W1 Rough Wood) in the country[66]. KWLM also responded to legislation that was passed in 2009, followed by further implementing regulations in 2011 on Indonesia's Timber Legality Verification System (*Sistem Verifikasi Legalitas Kayu*/SVLK). SVLK emerged as in response to increasing pressure from export markets and the passage of policies in consumer countries. Fearing doors to international markets would be closed, SVLK represents and institutionalized effort to support the legality of timber products. [67] SVLK regulates that forestry businesses (concessionaries and companies) must obtain certification. KWLM successfully responded to these policy developments and obtained SVLK certification in July 2012[68].

SVLK is becoming the dominant system for legal timber, and is being promoted by the Ministry of Forestry over FSC schemes[69]. Given that KWLM's FSC certification is set to end in 2015, SVLK certification is important for the sustainability of KWLM's activities. In addition, the European Union, one of the main importers of Indonesian timber products, has ratified the Forest Law Enforcement, Governance and Trade (FLEGT) Voluntary Partnership Agreement with Indonesia in February 2014. This establishes the acceptance of timber products with SVLK certification and establishes SVLK as the key instrument for assuring the legality of exported products originating from sustainable forest management[70]. Of note is that SVLK has been criticized by NGOs for its weak standards and shortcomings in implementation[71]. Nonetheless, for KWLM obtaining certification ensures that its products are eligible for export and guarantees a market base.

Report CDI-15-066

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Report CDI-15-060

WAGENINGEN UR
*For quality of life*

Klaver, D.C., Smidt H., Nugroho, K., Prasetya, K. S., February 2015, *LPPSLH end line report; MFS II country evaluations, Civil Society component,* Centre for Development Innovation, Wageningen UR (University & Research centre) and SurveyMETER. Report CDI-15-060. Wageningen.

This report describes the findings of the end line assessment of the Indonesian Foundation for Research and Development of Natural Resources and Environment –LPPSLH that is a partner of Hivos.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses LPPSLH's efforts towards strengthening Civil Society in Indonesia, based upon the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which LPPSLH contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain LPPSLH's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

# 1 Introduction

This report presents the civil society end line findings of LPPSLH in Indonesia, which is a partner of Hivos under the Dutch Consortium People Unlimited 4.1. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study, LPPSLH is working under the theme MDG7ab.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or co-funded development interventions implemented by Dutch Co-Funding Agencies (CFA) and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

**Changes *in the civil society arena of the SPO***

In the 2012 – 2014 period the two most important changes that took place in the civil society arena of the SPO are related to level of organisation and perception of impact, specifically the impact on civil society.

Since the baseline, LPPSLH's level of organisation has improved: It slightly expanded its network of NGOs to collaborate with and intensified its collaboration with some of them; It improved its financial resource base, and; it's cooperative model has also strengthened the relations between producers and middlemen at community level and in consequence, improving the social network and the capacity to defend one's interests. Other actors currently seek LPPSLH's support to introduce the model in their own district.

With regards to 'perception of impact', the livelihoods of some 1750 persons, of which 75 percent do not own land and 33 percent are women have improved, not only in the material sense by increased income, but also in immaterial terms: cooperative members have broadened their network, are engaging in the cooperative's live and management, and have gained more confidence in engaging with government officials in their district. The relations between middlemen and sugar producers have changed, decreasing the dependence of producers to take loans from middlemen. Middlemen who become cooperative members also have benefited in terms of an easier management of their cash flows.

The three cooperatives are functioning according to their bylaws and they ensure that the crystal sugar produced complies with the standards of premium markets, including organic niche markets.

Since the baseline LPPSLH and district governments collaborate to enhance the successes of the cooperatives. In this relation LPPSLH is increasingly being seen as an expert upon whom these governments can rely. Also the cooperatives receive more support from the local governments and both actors are regularly invited at meetings.

LPPSLH has also raised the awareness of the three local governments that crystal palm sugar is a potential export product, consequently leading to policy changes in favour of sugar. Apart from these the governments have started to influence the utilization of chemical fertilizer on other crops, such as

rice, as contaminants could spill into the organic coconut plantation area. The organic certification, of which crystal sugar marketing depends upon, requires such rigorous standards.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with LPPSLH, and interviews with external resources persons working in civil society organisations that receive support from LPPSLH; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of providing a view of the MDG or theme which the SPO is concentrating on.

**Contribution analysis**

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. KBR was amongst those SPOs selected for a quick process tracing. LPPSLH was amongst those SPOs selected for in-depth process-tracing.

The first outcome that we looked at is "small-scale palm sugar producers are organized into three cooperatives that are operational and profitable". This outcome illustrates how marginalised people have been engaged and organised, such that they are able to defend their own economic interests. The pathway that most likely explains this outcome is the success of LPPSLH's approach in organising the farmers and the marketability of the palm sugar the farmers produce. The contribution of the SPO towards achieving this outcome is in their support to the community in producing a marketable product of good quality and quantity, and linking farmer cooperatives with premium markets.

The second outcome that we looked at is "improved palm sugar farmers' position vis-à-vis middlemen". This outcome is important as it shows that LPPSLH's intervention have had an impact on social mobility, which is a precondition for a healthy civil society. This outcome has been achieved as a result of the SPO's role in the establishment of a new palm sugar value chain that has rivalled the domination of traditional value chains.

**Relevance**

Interviews with staff of LPPSLH, external resource persons, the liaison officer of Hivos, as well as contextual information helped to assess the relevance of LPPSLH's interventions in terms of its Theory of Change (ToC) for Civil Society (CS) as designed during the baseline study; the context in which LPPSLH is operating; and the CS policies of Hivos.

LPPSLH's business model developed for the palm sugar sector is relevant for the goals it formulated in its 2012 Theory of Change: sustainable agriculture and food sovereignty; improved access and control to economic resources and; organisational development. The interventions and outcomes achieved show that organising marginalised groups improves their social mobility. Although many strategies have been used to reach these goals, no evidence is available that LPPSLH has capacitated farmers to demand their rights and enhance their participation in the political economy.

With regards to the context in which LPPSLH is operating, its interventions and outcomes achieved are relevant since palm sugar production is a dominant livelihood strategy and source of income generation in all three districts which has received little attention by the government or the private sector. More traditional forms of sugar production have not allowed for an empowerment of small-scale farmers and producers. LPPSLH has demonstrated that diversified sugar products can be sold at premium market prices, and providing producers with access to these markets can help alleviate social and economic inequalities. LPPSLH's model has begun to draw the attention of the local government and private sector.

LPPSLH's interventions and outcomes are relevant to the civil society policies of Hivos and in line with Hivos' green entrepreneurship theme.

**Explaining factors**

The information related to factors that explain the changes in civil society, LPPSLH's contribution to these changes, and the relevance of its interventions were collected at the same time as the data were gathered for the previous questions. Apart from searching for explaining factors related to these evaluation questions, the evaluation team was also informed about other important factors such as the organisational performance of LPPSLH and relations with Hivos that might have had an effect on its performance, as well as external factors.

The most important factor that explains the changes in the civil society dimensions are Hivos' support, which has enabled LPPSLH to intensively accompany and organise palm sugar producers in three cooperatives in three districts of Central Java. Factors that explain LPPSLH's contribution to changes in civil society are LPPSLH's success in diversifying palm sugar products and linking to, or accessing, a suitable premium market. Factors that explain the relevance of LPPSLH's interventions and outcomes are related to public and private sector perception of palm sugar as an unprofitable product. Other factors that explain the evaluation findings are of LPPSLH's reliance on economic incentives offered by the premium market.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the governance issues LPPSLH is working on. Chapter 3 provides background information on LPPSLH, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Hivos. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in Appendix 2 of the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in Chapter 4. The answers to each of the evaluation questions are being presented in Chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in Chapter 6. Conclusions are presented in Chapter 7.

# 2 Context

This paragraph briefly describes the context LPPSLH is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

## 2.1 Political context

### 2.1.1 Brief historical perspective

Indonesia's rise to being the world's third largest democratic nation has been lauded by many world leaders. The county is often considered to be a model Muslim democracy. As the fourth most populous nation with an estimated 250 million people[1], Indonesia has sustained its democratic commitment since transitioning from an authoritarian leadership to a democracy in 1998. The decentralized administration now consists of 34 provinces and 508 districts and municipalities.

Prior to 1998, Indonesia was under strict authoritarian regime. Suharto, known for his so-called New Order (1966-1998) regime, ushered in radical transformations that would place social and political forces under direct state supervision. The defining characteristics of the Suharto era were a focus on economic growth and controlled consensus and political stability devoid of dissent. A series of tumultuous economic and political transitions in the nineties severely diminished the credibility of ageing President Suharto, who was forced to resign amidst mass street protests.

His departure in 1998 laid bare three decades of social inequalities, state-perpetuated abuses against human rights, and a lack of civilian liberties. The regime change opened the way for a period of *Reformasi* started under the Presidency of B. J. Habibie (1998-1999) and continued by Abdurrahman Wahid (1999–2001), Megawati Soekarnoputri (2001–2004), and Susilo Bambang Yudhoyono (2004–2014). Restrictions on citizen participation, press freedom and association were removed. Democratic reforms and decentralization led to direct elections, portioned authority, devolution of authority to regional authorities, formation of new political parties and ended the military's parliamentary influence. The distinct historical periods of the New Order Regime and *Reformasi* (1998-present) have shaped the emergence of civil society. Defining characteristics are summarized in the table below.

Table 1
*Characteristics that have defined the emergence of civil society in Indonesia*

| Characteristics | New Order, authoritarian period (1966 – 1998) | Reformasi (1998 – present) |
|---|---|---|
| **Political system** | Centralized, authoritarian characterized by unipolarity. Golkar as the dominant political party.<br><br>In 1999, there were 27 provinces, 306 districts and around 60,000 villages. | Decentralized, democratic. Fragmentation of power and atomization of patronage relationships. Emergence of numerous political parties. Direct presidential elections since 1999.<br>Decentralization altered the political and administrative landscape: 34 provinces, 410 districts, 98 municipalities, 6,944 sub-districts and 81,253.2 |
| **State-citizen interaction** | Benevolent leader, obedient population. Down to the village level, the state permeated society. | Modern political culture marked by diminishing hierarchy between the state and citizens, allowing for citizens to interact more freely. |

[1] In 2010 the population was estimated to be around 237 million people (BPS 2010 Population Census). The current figure is an estimate from BKKBN and similar figures are cited in the CIA's World Fact Book and the World Bank.

[2] Rumah Pemilu, "Gambaran Singkat Pemilihan Umum 2014 di Indonesia", 3 July 2014. Available from http://www.rumahpemilu.org/in/read/3351/Gambaran-Singkat-Pemilihan-Umum-2014-di-Indonesia (accessed 25 October 2014)

| | | |
|---|---|---|
| **Citizen representation and voice** | Strict control of speech, expression and association. | Burgeoning of CSOs, pressure groups and NGOs following the political euphoria after Suharto's fall. |
| | CSOs and their networks largely "hiding behind the screen", and operating under state surveillance. A period of growth occurred in 1995-98, as resistance was building. | Indonesian CSOs began to establish new networks internationally. Up until the early 2000s the focus was on state-centrist issues. Later, issues that CSOs were tackling became more diverse, ranging from pluralism, poverty reduction to fulfilment of economic, social and cultural rights. |
| **Media** | No free press, censorship and state-control. Suharto had firm grasp over how to use print & broadcast medias to promote political ideologies. | More vibrant media environment, flourishing of media businesses albeit in control of 12 main conglomerates that are mostly profit-driven and often have political ties. |
| | Limited public and CS use and access to internet until mid-90s. | Twitter nation, widespread social media use. |
| | | Growing realization of the importance of media/free press as the fourth pillar of democracy. |
| **Artistic forms of expression** | Art and literary censorship conducted by the state. Art forms were a means to reinforce political order. | Greater freedom of the arts and cultural sectors. Organizations able to hold art events more freely. Freedom of expression a catchphrase amongst individuals and artistic groups, but challenged by more conservative members of society. |
| **Religious expression and organization** | Regime repressed religious groups, especially radical forms. | Emergence of religious groups seeking to restore Islamic values and defend Muslim values. |

With political reforms came greater freedom and space for civic engagement. In the *Reformasi* period, there was a remarkable increase in the number of civil society organizations, many of which were Islamic in character. In 2000, the Central Agency on Statistics (BPS) recorded around 70,000 registered organizations, compared to just 10,000 in 1996.[3]New groups sprung up with donors encouraging activists to establish NGOs they could fund. These organizations were eager to distance themselves from state and often took an anti-government stance. Proliferating CSOs and NGOs have taken advantage of decentralization and greater regional autonomy to engage in public affairs. Civil society and government relations have improved, although both sides remain sceptical of the others' intentions.

### 2.1.2 Recent trends in the political context

Indonesia is considered to be a story of democratic success, but it still struggles to realize the benefits of sustained and equitable economic growth. In the political context, the main challenges lie in governing such geographically vast and decentralized country, applying principles of good governance and the enormous task of reforming the country's bureaucracy.

Although, Indonesia's 'big bang' decentralization initiated at the turn of the century narrowed the gap between local government and citizens, it has also localized political power struggles. While the devolution of authorities relieved tensions between the central government and the regions, it has also created opportunities for corrupt and rent-seeking practices, at the local level. As indicated by Transparency International's corruption index scores, perceived corruption in Indonesia remains high.

*Transparency International's Global Corruption Barometer survey: Indonesia*

| Year | Corruption perceptions Index Score<br>*(0 perceived as highly corrupt and 100 perceived as clean)* | Rank |
|---|---|---|
| 2011 | 30 | 100/182 |
| 2012 | 32 | 118/174 |
| 2013 | 32 | 114/177 |

Source: Transparency International

In 2013, decentralization was taken a step further with the approval of the Village Law, intended to address weak governance arrangements and empower rural communities to participate politically. The new law could also lead to village elites distorting power relations and misusing government funding if not properly monitored.

Indonesia is still transitioning politically and many challenges lie ahead. According to the 2012 Indonesia Governance Index's Executive Report, "Indonesia is witnessing a paradox in its democracy. On one hand, a successful opening-up of civil liberty has led to the avalanche of democratic demands across the nation, however on the other hand, democratic institutions' are inadequately respond to those demands." Nonetheless, the Indonesian Governance Index, which focuses on measuring provincial governance, does show a general improvement in the performance of the government (political office) bureaucracy, civil society and economic society based on principles of participation, transparency, fairness, accountability, efficiency, and effectiveness between 2008 and 2012. Civil society scores improved the most significantly, while scores for bureaucracy rose slightly.[4]

Table 3

*Indonesia Governance Index: Average provincial scores*

| Arena | 2008 | 2012 |
|---|---|---|
| Government | 4.93 | 5.46 |
| Bureaucracy | 5.53 | 5.58 |
| Civil Society | 4.85 | 6.33 |
| Economic Society | 4.77 | 5.71 |

Source: http://www.kemitraan.or.id/igi

In the past decade, Indonesians have generally enjoyed a freedom to participate in the political process through a direct-election mechanism. However, in September 2014 lawmakers voted in favour of a bill reviving indirect elections of regional heads. The controversial vote provoked public outcry which saw peaceful protests and the public voicing their discontent through social media. In early October, just before the end of his term, president Yudhoyono issued a regulation in lieu of the law, effectively repealing the law until further judicial review.

The recent 2014 elections which marked the end of Yudhoyono's 10-year term, demonstrated that Indonesian voters are increasingly voting for popular figures irrespective of political party alliances. While practices of corruption, vote-buying and poor voter administration remained in the recent election, the public seems to have matured politically, indicated by the enormous interest in televised debates between the leading candidates. The appeal of the newly sworn in President Joko Widodo, popularly known as Jokowi, has come from his hands-on, man-of-the-people approach. As Jokowi begins his five-year term he will need to start addressing a myriad of challenges that include corruption, stagnant economic growth, and human rights concerns, particularly with respect to the rights to freedom of expression, peaceful assembly, and religious intolerance. If left unaddressed, these challenges could seriously undermine Indonesia's stability and democratic reforms.

[4] The IGI uses a scale of 1 (lowest) to 10 (highest). Data is available online through their website. Indonesia Governance Index, Data, "IGI Executive Report". Available from http://www.kemitraan.or.id/igi/index.php/data/publication/factsheet/275-igi-executive-report (accessed 25 October 2014)

## 2.2 Civil Society context issues with regards to the MDG

Several important changes took place during the 2011 and 2014 period. First, the global financial crisis and Indonesia's rise to a middle-income country led to a decrease in international donor funding. Development actors, including CSOs and NGOs, have to compete harder for funding. Some have been more successful than others in diversifying funding by turning to the private sector or private foundations. At the expense of past idealism, local NGOs are now more disposed to receiving funding sources which in the past may have been criticized as supporting neoliberalism.

Regulatory changes also affected the civil society arena positively and negatively. Annex 7 provides an overview of some of these important policy changes. Amongst the more controversial laws to spark reaction was Law No. 17/2013 on Societal Organisations. In an open letter sent before the bill was enacted, CIVICUS said the law would undermine freedom of association and "prevent CSOs from working on sensitive topics related to good governance and democratic reform in the public interest".[5] FORUM-ASIA deplored the repressive provisions in the law that "leave all groups vulnerable to attacks, undermining the hard-won democratic space that has been forged by civil society since the end of the New Order regime."[6]

Other laws passed that provoked criticism were the State Intelligence Law (October 2011) and the Social Conflict Law (April 2012). NGOs and media see these laws as imposing further restrictions on freedom of speech, potentially leading to the criminalization of human rights defenders and signifying a tightening of state control. Discriminatory content was also an issue in discussions on the Religious Harmony Bill in 2013, for which drafting was initiated in despite not being part of the planned National Legislative Program. Late in 2013, the House of Representatives came under fire again for its weak stance against religious intolerance when it re-endorsed a law that limits state-recognized religions to six.

Land rights and natural resource protection have been a long-standing issue for Indonesia. While Indonesia has adopted and amended laws to improve the rights of smallholders and indigenous communities, many of these regulations have faltered in their implementation. Part of the issue lies in the overlap and lack of clarity of laws adopted that regulate different sectors and local legislation. Another issue is that there is a lack of oversight in the procedures such as granting permits and licensing. These problems, which are commonly found across development sectors, are compounded by a lack of information among local communities on what the laws regulate and their rights vis-à-vis them.

# 3 Description of LPPSLH and its contribution to civil society/policy changes

## 3.1 Background LPPSLH

*Lembaga Penelitian dan Pengembangan Sumberdaya dan Lingkungan Hidup* or the Foundation for Research and Development of Natural Resources and Environment (LPPSLH) was established in 1987. LPPSLH's vision is to become a professional and self-sustained organisation that contributes to social justice and democratisation on the principles of equality and interdependency in the fields of natural resources and environment. The missions of LPPSLH are as follows[7]:

- Ensuring effective management of organisational resources for the sustainability of community empowerment activities;
- Building a reputable organisation and expanding networks;
- Conducting advocacy and civic education to strengthen peoples' organisations as the motor of social movements;
- Developing professional institutional systems through effective and accountable administrative, MIS and finance systems.

To realize its vision and mission, LPPSLH has four programmes[8]:

1. Agriculture: aiming to facilitate the development of sustainable agriculture in order realize the independence of farmers and food sovereignty.
2. Forestry: aiming to facilitate the development of community forestry in order to realize the fair, democratic and sustainable forest management.
3. Urban development: aiming to facilitate the development and improvement of community participation, especially the poor and marginalized
4. Small business development: aiming to facilitate the development of small and micro enterprises in order to realize access to and control over economic resources.

Since 2008, Hivos has supported LPPSLH's agricultural programme in Central Java, where its interventions are concentrated in seven districts. LPPSLH has assisted small-holders and producers through support from government, development banks and multilateral agencies, private sector actors, international NGOs and national grant-making organisations. Assistance to coconut palm sugar producers has been provided for almost 20 years by the organisation. LPPSLH has experience in supporting the establishment of cooperatives. The organisation also has developed a business unit. Apart from its concern on agricultural and livelihood issues, LPPSLH has supported women's empowerment issues (also with Hivos support) by providing assistance to small-scale women entrepreneurs.

## 3.2 MFS II interventions related to Civil Society

The MFS II interventions that relate to civil society in LPPSLH's project are associated with the support provided to small-scale producers. LPPSLH works to minimize the vulnerability of small-scale sugar producers by organising them and creating market access opportunities to sell their products at

[7] "Profil LPPSLH", LPPSLH, 2012
[8] Ibid

reasonable and fair prices. In consequence, producers improve their incomes and socio-economic position.

LPPSLH's interventions are invariably related to 'strengthening of intermediary organisations' and 'civic engagement'. By supporting cooperatives, the project has played a role in developing the palm sugar value chain that benefits small-scale farmers. Creating community organisations facilitates the participation of marginalised groups in the local economy, while direct actions to improve livelihoods address structural poverty by increasing control over economic resources. LPPSLH's efforts in the agricultural sector are considered to be contributing to sustainable growth, which takes into account the environment, community involvement and gender parity. LPPSLH's interventions contribute to building a strong civil society, as well as assisting the district government to regulate an insurance scheme for palm sugar farmers and tappers. The district government engaged Bank Pembangunan Daerah or BPD of (Regional Development Bank) Central Java, a provincial government–owned bank to provide the insurance scheme.

Support to palm sugar producers takes place in three districts in Central Java: Banjarnegara, Purbalingga and Banyumas (See map below). Interventions began in Banyumas and were then replicated in Banjarnegara and Purbalingga.

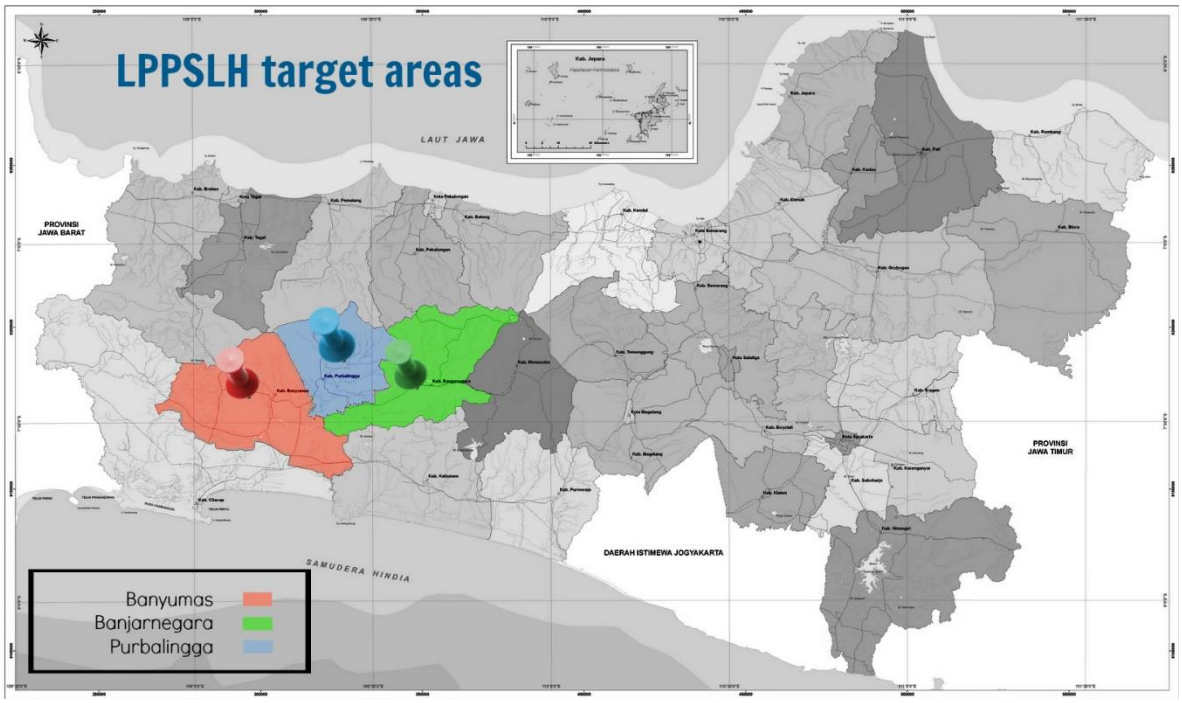

***Figure 1*** *Target areas of LPPSLH support for palm sugar producers.*

[9] Costs that relate to civil society development or policy influence are those costs that possibly contribute to the development of the CIVICUS dimensions, excluding coordination and office costs; staff costs and financial reserves.

# 4 Data collection and analytical approach

## 4.1 Adjustments made in the methodology of the evaluation

The evaluation process began with an input-output-outcome analysis of documents made available by the CFA and any relevant documents from the baseline evaluation. While generally this preliminary step was able to provide guidance to the in-country evaluation team for the focus of process-tracing, there were some challenges due to incomplete documentation, particularly pertaining to the project documents for interventions beginning in 2013. LPPSLH project documents were not fully helpful for the evaluation team as some progress was not reported systematically according to program's logical framework. There was some confusion and ambiguity because reports made reference to three different project titles. Moreover, the progress was primarily reported on one cooperative (in Banyumas) while there are actually three cooperatives receiving LPPSLH assistance. Nonetheless, because the support during the 2013-2015 period is more or less a continuation of earlier support (2011-2013), the input-output-outcome analysis was still of benefit to the team.

The evaluation team followed the operational guidelines to a great extent, and was able to hold a workshop with all of LPPSLH sub-groups. In practice, the workshop lasted five hours, with full participation of all sub-groups. However, due to unfamiliarity with CS dimensions and a large turnout (around 20 participants), the workshop was not fully efficient. As a result, of participant's difficulties in understanding CS dimensions and questions, the evaluation team was unable to obtain averages or scores for each subgroup. The in-country team assigned the scores and then confirmed these with LPPSLH.

Another obstacle was the lack of participant preparation for the workshop. Not all participants had fully read or understood relevant documents (baseline report, CS dimensions change) shared with them prior to the workshop. All of the participants found it difficult to respond to the CS dimensions of change questions, partly due to confusion over whether or not the evaluation's scope was focused on the Hivos-funded projects or more general for organisational/institutional changes.

There was also some discussion between CDI and the in-country evaluation team as to whether or not the cooperative structure should still be considered part of civil society, especially since the cooperative also had a business objective. But since LPPSLH is not a cooperative itself and claims to have a strong basis at the grassroots level, cooperative establishment was considered to be a means to organize small-scale farmers and producers.

## 4.2 Difficulties encountered during data collection

During data collection, the team experienced the following difficulties:

- Workshop participants did not really understand, nor were they familiar with the CS indicators or the CIVICUS framework. They found it difficult to relate LPPSLH's situation with the indicators, although most of them participated in the baseline process. This lessened the effectiveness of the workshop.
- LPPSLH does not have a strong monitoring and evaluation system in place, nor does it have dedicated personnel. As such, it added to difficulties in finding hard data and effected the agreement on the outcomes. Of note is that a new research and development division was formed nine months ago, which is supposed to take on the role of external reporting.

- LPPSLH has not had an evaluation conducted by an external party before (except the MFS-II baseline and end line) which resulted in a lack of preparation and minimum understanding of common evaluation practices.
- The outcomes identified for process-tracing should ideally be supported by more extensive data collection (through for example a survey) to infer a general conclusion from LPPSLH beneficiaries. However, with the available time and resources, such data collection could not be conducted.
- Identification of two outcomes for in-depth process tracing

The first outcome (small-scale palm sugar producers are organized into three cooperatives that are operational and profitable) was selected with the following considerations:

- It was one of several outcomes that all workshop participants agreed to as being a significant achievement.
- It is one of the elements in LPPSLH's Theory of Change (ToC), and the resulting model of change also addresses the ToC's main assumptions.
- The input-output-outcome analysis also provided similar directions for in-depth process-tracing.
- Since this outcome is an indicator of increased level of organization, it can also be used to measure the extent of LPPSLH's civic engagement.
- Since the contract with Hivos specified performance indicators that focused on cooperative growth and capacity improvements, the evaluation team expected fewer difficulties to find supporting evidence.

The second outcome (Improved position of palm sugar farmers' vis-à-vis middlemen) was selected because:

- It was one of several outcomes that all workshop participants agreed to as being a significant achievement.
- The baseline report suggested that the cooperative work was building a stronger civil society and identified the decreasing control of middlemen in the value chain as an area of impact.
- The outcome was linked to the assumptions and elements of Theory of Change (ToC) from the baseline, which included a goal for building farmers' self and control of economic resources.
- It was more suitable to LPPSLH's intervention design, which does not focus on influencing public and private sector.
- The second outcome is related to the first outcome. The second outcome achievement requires the first outcome as part of its causal explanation.

Based upon an analysis of the projects and programmes financed by the Dutch CFAs, four strategic orientations for civil society were identified. Two of which were selected for each SPO for in-depth process tracing. In the preliminary guidance, CDI suggested to the country team to look at the selected strategic orientations. For LPPSLH, only the first outcome matched with civil society orientations in: ensuring that the organisations that receive support from the SPO (intermediary organisations) are capable of playing their role in civil society; the influence in public sector was not selected as LPPSLH's intervention design does not oriented specifically to this dimension. As a more relevant replacement, the evaluation team decided to look at impact on civil society.

# 5 Results

## 5.1 Results obtained in relation to intervention logic

Table 5

*Overview of results achieved in relation to project plan LPPSLH*

| Result Level | Description | Level of achievement |
|---|---|---|
| Objective 1 | Palm sugar farmers have a role and control in managing business and product quality assurance | Achieved: Farmers able to implement a quality management system. Farmers also have the ability to regulate the income and expenditure in the business, reduce dependency on collectors / brokers. Improved land production assets and increased numbers of crops. Farmers able to apply agreed standards of quality for organic palm sugar, and produce grade A quality sugar. |
| Result 1.1 | Farmers have capacity in managing palm sugar businesses | Achieved: Farmers have improved skills in business management. 533 farmers have records of production, sales and revenue.<br><br>Cooperative Nira Satria (KSU) has an agreement with CV P3R for the sale of sugar on domestic and international markets, agreements with 6 buyers for export and 4 buyers for domestic market |
| Result 1.2 | Improved quality of palm sugar products, oriented towards a proper internal management system that is in line with consumer needs. | Achieved: By early 2013 1,044 farmers have become certified members of ICS to apply the quality management system. Not all members of Nira Satria are certified. |
| Objective 2 | Organization built (cooperative) for palm sugar farmers that is able to market products and provide health insurance services. | Achieved: In December 2011, the farmers formed cooperative Nira Satria, registered as a legal entity. By 2012 cooperative membership reached 1,044 certified producers covering 9 villages. Insurance scheme provides minimal coverage. LPPSLH worked with the local government to organize an insurance scheme for palm sugar farmers and tappers provided through a state-owned bank. |
| Result 2.1 | Palm sugar farmers organization built, which is able to market its products. | Achieved: Increase in cooperative membership. 1,044 palm sugar farmers from four sub districts in Banyumas district. From Feb 2012 - Feb 2013 the cooperative has marketed 99,115 tons of sugar. Improved capacity of cooperative in: managing palm sugar business; participatory management through internal control system; in providing support and assistance to palm sugar producers; build partnerships and networks with a number of actors: Dinperindagkop, Dispertanhutbun, banks - BI & BRI, Unsoed, and CSOs like GDM (Gerakan Desa Membangun). |
| Result 2.2 | Palm sugar farmers' organization has certification and can provide health insurance services to the community. Indicator - 1,000 palm sugar farmers registered with the ICS member institutions (cooperatives) as the holders of the certificate of organic palm sugar. | Achieved: The ICS coordinator of the cooperative coordinates ICS teams established at the village level. ICS team performs quality control, production training, technical supervision and checks for products that are not in accordance with the internal organic standards. |
| Other performance indicators not captured by above results | Income of members of the cooperative increases significantly through the palm sugar business and their health also improves through an insurance scheme offered by the cooperative. | Achieved: Increased income of 35% for 520 producers, more efficient production increases income/return 30% through use of more efficient cookstoves. 7 members injured at work are covered through the community insurance scheme. |
| | Improved capacity of LPPSLH to manage earned income. | Achieved: LPPSLH trusted by government and Swisscontact to undertake training and research. Increase in earned income through CV P3R, as much as IDR 5 billion per year. |

LPPSLH reports did not always follow the intervention logic and plan. The above results have been summarized from the documents made available CDI[10]. Based on LPPSLH's institutional audit, there is an explicit distinction between two Hivos projects: *Strengthening of Rural Women to Manage and Improve Market Access for Agricultural Product* and *Improving the Welfare of Coconut Sugar Producers in Purbalingga and Banjarnegara District through Improved Product Quality and Market Access.* However, in their reports LPPSLH used the title *Quality improvement and Market Access Development of Organic Palm Sugars Produced by Smallholder Farmers in Central Java*. Also, LPPSLH did not report on specifically formulated objectives with regard to the position of women and gender equality, nor did project reports mention progress in Purbalingga and Banjarnegara Districts.

Box1: Crystal coconut palm sugar vis-à-vis traditional coconut cast sugar

Coconut sugar syrup can be processed into two kinds of product. Traditionally, the syrup is boiled and then condensed into casts or blocks. The new approach introduced grinding the condensed syrup instead of casting, resulting in crystal-like or grain sugar (thus domestically popular as 'crystal coconut sugar' or 'ant sugar'). With its grainy form and longer processing, crystal sugar has less moisture content allowing for better packaging and longer expiry duration. Crystal sugar is a product preferred by premium and export consumers while traditional cast sugar is more widely used domestically. To increase its added value, crystal coconut sugar has to be certified to ensure it is produced organically. As a diversified product, crystal coconut sugar is a new or alternative value chain from its traditional counterpart. The traditional value chain has been well known to marginalise farmers /producers as it is identical with debt, untransparent pricing, and monopolization by middlemen.

The Quality improvement and Market Access Development of Organic Palm Sugars Produced by Smallholder Farmers in Central Java corresponds with the Hivos contract RO SEA 1002298, implemented in between April 2011 and March 2013. This project was followed up by another contract (RO SEA 1007811) with the title: Strengthening Palm Sugar Producer's Cooperative, Identification and Pilot Initiative on Productive Landscape in Banyumas Central Java, 2013 – 2015.

## 5.2 Changes in civil society in the 2012-2014 period

### 5.2.1 Civic engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

Since the baseline assessment, LPPSLH has contributed to a slight improvement of civic engagement because membership of the three cooperatives that it has created has increased and because the cooperative's management has improved.

The Hivos supported program initially targeted interventions in only one district, Banyumas. It started with the creation of the multi-purpose cooperative Nira Satria that has given the impetus for the replication of LPPSLH's model to the districts of Banjarnegara and Purbalingga. In addition, Cilacap district officials have now approached LPPSLH, also requesting their assistance. More small-scale sugar producers are benefitting from LPPSLH's interventions. Since their establishment, all three cooperatives have grown in membership size and have successfully included different farmer groups: men, women, landowners, landless and middlemen. The Nira Satria cooperative started with 46 members in 2011, but two years later the three cooperatives counted a total membership of 1,749[11]. Women comprise 33 percent of cooperative members, while landless farmers comprise almost 75 percent (Nira Satria and Nira Perwira).

[10] Analysis of achieved results mainly based on the following documents: Progress Program LPPSLH berdasarkan Indikator Kontrak, Proposal Program Lanjutan Gula Kelapa Banyumas 291113, Proposal _ Rencana Kerja Hivos-LPPSLH 2011.

[11] There is no clear data for 2014 except for Nira Perwira. If the 2014 figures for this cooperative are taken into account, then the total membership now counts 1,770

The cooperatives offer benefits beyond the generation of profit. Members benefit from trainings, monitoring of production, certification of the sugar products, savings, and a better ability to pay off debts through the higher prices the cooperative can offer for crystal sugar. With the establishment of the cooperatives, the quality of organic palm sugar produced by smallholder farmers has improved and there is access to premium markets for crystal sugar based upon coconut and palms.

LPPSLH has tried to address gender equality through promoting women's representation in the cooperative management structure and by engaging women in the production of refined sugar. The processing of sugar relies on both women and men carrying out particular tasks, but how women benefit from increased palm sugar markets is not measured.

Box 1: Coconut palm sugar and processing methods

The producers make coconut sugar (also known as coco sugar, coconut palm sugar or coco sap sugar) is a sugar produced from the sap of cut flower buds of the coconut palm. Coconut sugar has been used as a traditional sweetener for thousands of years in the South and South-East Asian regions where the coconut palm is in abundant supply. The world's largest producers of coconuts are the Philippines and Indonesia.

Coconut sugar syrup can be processed into two kinds of product. Traditionally, the syrup is boiled and then condensed into casts or blocks. The new approach introduced grinding the condensed syrup instead of casting, resulting in crystal-like or grain sugar (thus domestically popular as 'crystal coconut sugar' or 'ant sugar'). With its grainy form and longer processing, crystal sugar has less moisture content allowing for better packaging and longer expiry duration. Crystal coconut sugar is a product preferred by premium and export consumers while traditional cast sugar is more widely used domestically. To increase its added value, crystal coconut sugar has to be certified to ensure it is produced organically. As a diversified product, crystal coconut sugar is a new or alternative value chain from its traditional counterpart. The traditional value chain has been well known to marginalise farmers /producers as it is identical with debt, untransparent pricing, and monopolization by middlemen.

Farmers themselves make up the executive management of the cooperatives. Mandatory meetings are held by the cooperatives to discuss planning and progress. There is evidence that the cooperatives' organisational capacity has also increased, and that non-performing executive committees have been replaced. The cooperatives are independent institutionally from LPPSLH and can sell sugar to any buyer, although they prefer to sell to *Pusat Pengembangan Produk Rakyat* or P3R (Civil Product Development Centre, the marketing unit of LPPSLH). Al three cooperatives have been recognized for their success through various awards and acknowledgement by the district government. LPPSLH maintains an institution-to-institution relationship between themselves and farmers' cooperatives.

Whereas LPPSLH, during the baseline still had to engage with the local government of Banyumas district to decrease the regulatory burden of both the first cooperative and their members, this is not necessary anymore, because the leadership of the district changed.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.2 Level of organization

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

Since the baseline, LPPSLH's level of organisation has improved: It slightly expanded its network of NGOs to collaborate with and intensified its collaboration with some of them; It improved its financial resource base, and; it's cooperative model has also strengthened the relations between producers and middlemen at community level and in consequence, improving the social network and the capacity to defend one's interests.

Since the baseline strategic collaboration and partnerships were maintained with organisations working on similar issues (i.e. agriculture and the economic position of small-scale farmers and producers). At the regional level, LPPSLH became the coordinator Komunitas Rembug Tani

(Community for Rembug Farmers) in 2013, a network that promotes organic farming and food security. LPPSLH's collaboration with these organisations, especially the People's Coalition for Food Sovereignty (KRKP) and Rembug Tani) is quite regular. At the national level, since 2014 LPPSLH is engaged in a new network called Agri-Profocus Indonesia, which works with members in the areas of youth in farming, access to finances, market access, and sustainable development services on different agricultural crops and value chains.

Generally, LPPSLH has increasingly been able to defend the interests of the producers who joined the cooperatives, initially created in only one district but now performing in three districts. It has developed a tried and tested a model for improving the capacities of farmer cooperatives that has led to better economic position of small producers. In addition to intensive accompaniment, one of the key elements of success of the model has been the appropriateness of the interventions with respect to the rural dynamics and the complex relations between farmers and middlemen. LPPSLH has been open to the participation of middlemen in its cooperative model. Middlemen and farmers have enjoyed benefits from the diversification of sugar products and the introduction of a new value chain. With the introduction of a new export-oriented market for organic crystal coconut palm sugar offering better profit margins, farmers have an alternative to traditionally produced cast sugar products. This in turn has led to a better position vis-à-vis middlemen, who themselves are joining the cooperative ranks because of improved cash flow opportunities. However, for non-cooperative members and members who continue to produce the traditional forms of cast sugar, middlemen are still in a position to control prices, especially amongst farmers who rely on middlemen for loans. Farmers who are not cooperative members have little option but to sell their products to middlemen as a means to pay off debts.

LPPSLH's support to the cooperatives is still essential although the cooperatives are becoming more independent. The cooperatives have greater financially independency, as illustrated in their ability to pay for General Assemblies utilizing their own fund. All three cooperative still rely on the market linkages created by LPPSLH (through P3R), intensive accompaniment, financing of routine certification, and rigorous quality control. Only Nira Satria has been able to cover half the certification costs. LPPSLH has also established a quality control unit, known as ICS (Internal Control System) and has trained farmers to regularly monitor whether crystal sugar is produced to international export standards. In doing so, LPPSLH has applied a participative farmer-to-farmer approach that relies on social pressure and incentives.

In its work with sugar farmers, LPPSLH has diversified funding sources. The government has supported much of LPPSLH's work either through funding arrangements or by assisting the cooperatives through the provision of tools or other production inputs. There is a high level of interest from neighbouring districts like Cilacap to fund the replication of LPPSLH's model. With the current resource base, LPPSLH's support to the three cooperatives could be sustained even without external donor funding. With regards to other program areas, LPPSLH receives funding from USAID and Global Fund for an HIV/AIDS intervention and Ford Foundation for a programme on agroforestry.

### 5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision-making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

In 2013, LPPSLH improved its organisational structure by clearly separating the functions of the executive management and the board. Another improvement since 2012 has been in LPPSLH's auditing practices. The SPO now conducts both project-based audits and institutional audits. The institutional audit is funded by LPPSLH themselves. The composition of the social organs and diversity of them remains the same as during the baseline: There are no community members or persons representing marginalized groups in the social organs, which is not unusual for foundations in Indonesia.

As during the baseline, LPPSLH has applied transparency principles within the cooperative structures as well. Cooperative members are informed of the financial conditions and have the right to inquire with the cooperative on these issues or to express their ideas in the general assembly. Cooperative members are also aware of the prices of palm sugar on the international market and profit-sharing mechanisms.

**Score baseline 2012 on an absolute scale from 0-3: 2**

**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perceptions of both civil society actors (internal) as well as actors outside civil society are taken into account. Specific sub-dimensions for this evaluation are the extent to which the SPO has contributed to engaging more people in social or political activities, strengthening CSOs and their networks, and has influenced public and private sector policies.

**Impact upon the civil society arena**

Since the baseline LPPSLH's interventions have slightly improved the civil society arena in which it operates.

In the first place, the livelihoods of some 1750 persons, of which 75 percent do not own land and 33 percent are women have improved, not only in the material sense by increased income, but also in immaterial terms: cooperative members have broadened their network, are engaging in the cooperative's live and management, and have gained more confidence in engaging with government officials in their district.

In the second place the relations between middlemen and producers are being challenged by the cooperatives that are capable of producing crystal sugar for premium markets, thus offer new opportunities for sugar producing farmers and decreasing their chance of becoming trapped in debt pay-off arrangements with middlemen which further impoverish them. Also middlemen, in particular smaller and vulnerable middlemen, who due to the non-payment of debts in time, also faced difficulties in managing their cash flows; join the cooperatives and accept the cooperative arrangements in place. Their advantage is an easier management of their cash flows.

In the third place, apart from the three cooperatives created between 2011 and 2013 that continue to grow in membership, other districts are also interested to have such cooperatives being created, some of which experienced this is not possible without the support given by LPPSLH. Some of these districts have started to approach LPPSLH to assist them in this.

The three cooperatives are performing and a key element of their success is that they have a quality control system in place that ensures that the crystal sugar produced complies with the standards of premium markets, including organic niche markets. According to LPPSLH this success is not only induced by economic incentives, but also by social incentives in place that consist of farmers working together based upon the principles of solidarity and sense of belonging.

The cooperatives are functioning according to their bylaws and internal accountability systems in at least one of them were used to replace the management committee when they are not performing. The cooperatives finance their annual general assemblies and increasingly become financially independent. However, they still require LPPSLH to fund routine certification and quality inspection, monitoring, and promotional activities. They also still rely on the market linkages created by LPPSLH, in particular through P3R, the business unit within LPPSLH.

**Public sector collaboration and policy influencing**

LPPSLH considerably improved its collaboration with the public sector and based upon the successes of the cooperatives it also increased its influence upon local governments since the baseline assessment in 2012.

It started its collaboration with two new districts with a memorandum of understanding and its relations with the first district improved due to a change of leadership in that district. Given the

successes obtained until so far, other districts also gained an interest in collaborating with LPPSLH with funding coming from the CSR fund of a state-corporation.

The district Offices for Cooperatives and SMEs in the three districts have learned from LPPSLH's success in supporting cooperatives and the SPO is now perceived as an expert agent that can support local governments. The SPO also helped to change the negative perceptions these governments used to have with regards to NGOs.

Also the collaboration between the cooperatives and district officials has become more open and beneficial for both. Officials are regularly being invited at meetings of cooperatives and vice-versa and they take colleagues from other districts with them to visit the cooperatives. Apart from these, local governments have waved registration costs for the last two cooperatives; provided production tools; assisted in certification and; built a central processing unit for one of the coops. However LPPSLH is at the same time concerned that more intense engagement with the local governments may result in a negative backlash for the cooperatives: the cooperative that received support in the construction of the central processing unit was forced to pay unexpected additional costs to the government-appointed contractor and threatened that the construction process would stop if they refused to do so.

The cooperatives are invited to national and international events to promote crystal sugar as a local product and received several awards until so far, amongst which one by former President Yudhyono.

LPPSLH has successfully influenced local governments on two issues that are important for organic crystal palm sugar: In the first place they created the awareness amongst government officials to see crystal sugar as a potential export product from Indonesia and in consequence two of the three districts have changed their plans for small-scale district industries in favour of palm sugar as a priority product.

In the second place the three districts are now protecting the palms and coconuts used for the production of organic crystal sugar from an overuse of chemical fertilizer: the governments have campaigned to reduce the utilization of chemical fertilizer on other crops, such as rice, as contaminants could spill into the organic coconut plantation area. The organic certification, of which crystal sugar marketing depends upon, requires such rigorous standards.

In addition to these two issues, LPPSLH also managed to contribute to the district's government practice to provide for an insurance scheme for palm sugar farmers and tappers.

**Private sector collaboration and policy influencing**

Generally speaking, there is no change compared with the situation the baseline. LPPSLH continues working with a palm sugar exporter company PT. Kampung Kearifan Indonesia (PT KKI), PT Big Tree Farm and PT ALM, however, there is no information on influence to private sector agencies' policies and practices.

Since 2013, LPPSLH's cooperation with a company that made available a CSR fund for the rehabilitation of the Nusakambangan forest ended and since then no new relations were established with private sector organisations. However in the future LPPSLH is likely to receive CSR funds from a state-corporation in a district that wants to create a sugar cooperative.

The SPO's parent foundation's business unit, *Pusat Pengembangan Produk Rakyat* (People's Product Development Center or P3R) is however engaging with the private sector. P3R was initiated in 1995 and is currently sourcing crystal palm sugar through the cooperatives (the cooperatives are free to sell to others buyers), who in turn receive a premium price. P3R's exports increased from 20 tons/month in 2012 to 90 tons/month in 2014 and the organisation is not the only exporter of premium crystal sugar.

The positive experiences of LPPSLH in the three districts also mobilise other CRS funding from private sector organisations in support of crystal sugar production. One example is that of a ceramic tile corporation supported the three districts in financing hygienic upgrades in the production of palm sugar.

**Score baseline 2012 on an absolute scale from 0-3: 2**

**Score end line 2014, relative change on a scale of (-2, +2): 2**

### 5.2.5 Civil Society Environment/Coping strategies

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in Chapter 3. In this section we describe how LPPSLH has coped with the national and local context.

In mid-2014, the 2012 Law on Cooperatives was annulled through a Constitutional Court decision. This means that the law currently recognized is the predeceasing Law. No. 25/1992. To cope with this change, LPPSLH helped the cooperative administration to comply with the policy, although the change in legislation did not have a significant impact since they did implement schemes allowed under the annulled law.

More relevant to LPPSLH are the local dynamics and the relations between middlemen and farmers, which are explained in other sections. Also of relevance is the prominence of economic development on Indonesia's development agenda. The national government has implemented large initiatives like the Master Plan for Accelerating and Expanding its Economic (MP3EI) and local governments are also attempting to secure economic growth. Cooperative development is regarded as one of the ways through which the Indonesian economy can be developed. Local governments have a keen interest in supporting such initiatives. This is one of the reasons why LPPSLH has received such wide acknowledgement. There are however some potential negative impacts resulting from government support to LPPSLH's cooperatives due to the lack of transparency and potential corrupt practices in the implementation of government programs. LPPSLH has asked their field facilitators to pay more attention to such issues.

**Score baseline 2012 on an absolute scale from 0-3:** **1**

**Score end line 2014, relative change on a scale of (-2, +2):** **1**

## 5.3 To what degree are the changes attributable to the Southern partners?

This paragraph assesses the extent to which some outcomes achieved can be "attributed" to LPPSLH. Starting with an outcome, the evaluation team developed a model of change that identifies different pathways that possibly explain the outcome achieved. Data collection was done to obtain evidence that confirms or rejects each of these pathways. Based upon this assessment, the evaluation team concludes about the most plausible explanation of the outcome and the most plausible relation between (parts of) pathways and the outcome. The relations between the pathways and the outcomes can differ in nature as is being explained in table 6.

Table 6

*Nature of the relation between parts in the Model of Change*

| Nature of the relation between parts and other parts or outcome | |
|---|---|
| The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient) |  |
| The part does not explain the outcome at all: other subcomponents explain the outcomes. |  |
| The part explains the outcome but other parts explain the outcome as well: there are multiple pathways (sufficient but not necessary) |  |
| The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient) |  |
| The part is a contributory cause it is part of a 'package' of causal actors and factors that together are sufficient to produce the intended effect. |  |

Sources: Mayne, 2012; Stern et al, 2012

The following paragraph assesses LPPSLH's contribution to two outcomes. Each paragraph first describes the outcome achieved and the evidence obtained to confirm that the outcome has been achieved. It then presents the pathways identified that possibly explain the outcomes, as well as present information that confirms or refutes these pathways. The last section concludes in the first place about the most plausible explanation of the outcome, followed by a conclusion regarding the role of the SPO in explaining the outcome.

The two outcomes that were selected are:

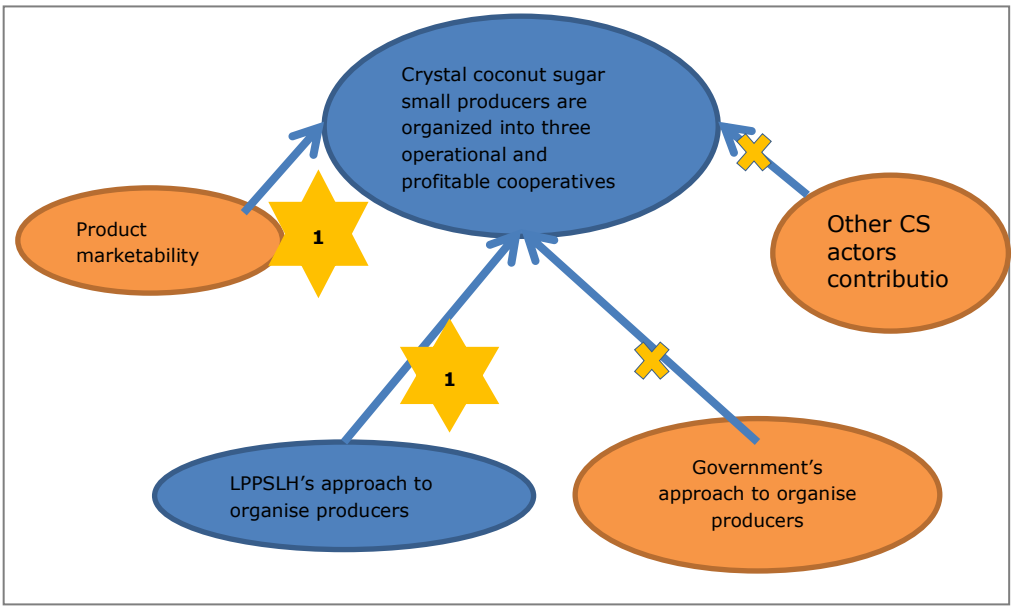
- Small-scale crystal sugar producers are organized into three operational and profitable cooperatives
- Improved sugar farmers position vis-à-vis middle-men

### 5.3.1 Outcome 1: Small-scale crystal sugar producers are organized into three operational and profitable cooperatives

This outcome represents an improvement in civil society 'level of organisation'. The indicators of this outcome are: cooperatives have a legal status and are acknowledged by the government and market actors; the number or trend of farmers being organised within the cooperatives; crystal sugar productivity, and; average profit received by each member (on a monthly basis). The latter indicator is included to show that improved level of organisation is beneficial for the marginalised sugar producers (the organisation helps defend their economic interests), and as such it is more likely to be sustainable.

Nira Satria cooperative was established on 23 December 2011 in Rancamaya village, Banyumas district, and legalized with a notary act. This is further confirmed by the Forum for Economic Development and Employment Promotion (FEDEP) Banyumas, and by project documents. Nira Satria has 1,070 members[12] with 1,044 certified producers in 9 villages[13]. Project reports and online information confirms that the production capacity for grade-A crystal coconut palm sugar by the cooperative in 2013 reached 90 tons/month. Given the production amount and the price at which one kilogram of sugar is purchased from the farmers and the price the same amount fetches on the premium market, the evaluation team estimates that each producer receives net profits of IDR 280,000 per month. This is 68 percent of what Indonesia considers to be the poverty line margin (IDR 407,000/month, BPS standards in 2013).

The second cooperative, Nira Perwira, was established in Purbalingga district on 11 June 2013, legalized through a notary act in July 2013. It has around 380 members in 5 villages, and has marketed 15 tons of sugar per month in 2014. It is estimated that each member receives a net profit of IDR 155,000/month (38 percent of poverty line margin). Nira Kamukten cooperative was established in Banjarnegara district on 30 April 2013 under direct supervision of the District Department of Industry, Trade and Cooperatives. It has 299 members and a similar production capacity to Nira Perwira.



The number of members of each cooperative has increased since they were established. Each cooperative has received an award or recognition from the government at national, provincial, or district level, as well as substantial media exposure.

*Causal pathways*

There are four possible pathways that may explain this outcome:

1. Pathway 1: Product marketability
   The marketability of crystal coconut palm sugar offers the producers clear prospect for profit, which is believed to be their main incentive in joining the cooperatives. This pathway explains the outcome by mainly external market factors. To reject this pathway, we need to prove that: the cooperatives were established before they were able to market their product; or that the cooperatives would still be operational even if the product is no longer marketable; or that its members have joined for other incentives other than financial profit.

[12] Fedep Banyumas, Profil, "Koperasi Nira Satria". Available from http://www.fedepbanyumas.com/index.php/profil/koperasi-nira-satria (accessed 19 December 2014)
[13] "2012 Annual Report LPPSLH", LPPSLH, 2012

2. Pathway 2: LPPSLH's approach to organise producers
   LPPSLH's approach is characterized by intensive accompaniment, linkage to market, and inclusion of middlemen in the cooperatives. This pathway is in direct opposition to pathway 3 and 4, which together represent the influence and interventions of external actors as contributing to the outcome's achievement. To reject this pathway, we need to find evidence that without LPPSLH's approach, the outcome would still be achieved.

3. Pathway 3: Government's approach and intervention to organise producers
   As an antithesis for pathway 2, the government's approach is characterized by a lack of intensive accompaniment, no linkage to market, and the exclusion of middlemen. To reject this pathway, we need evidence that the government's approach has not been successful in any of the three districts and that the government has not approached or supported LPPSLH's cooperatives (Nira Satria, Nira Perwira, Nira Kamukten).

4. Pathway 4: Other CS actors' contribution
   This pathway anticipates the role of external actors which could be critical to the outcome achievement, regardless of pathway 2 and 3. To reject this pathway, we need to find that without the intervention of CS actors the outcome would still be achieved.

Information that confirms or rejects the pathways:

<u>Pathway 1: Product marketability</u>

Information that *confirms* pathway 1:

Various sources (LPPSLH, government, cooperative, media coverage) report that the premium price of crystal sugar has been attracting more producers to process coconut palm sugar syrup into crystal sugar instead of traditional cast sugar. As such, members have joined the cooperatives to gain knowledge, benefit from quality control and assistance, gain market access, and to be supported by production facilities. These elements are all needed to ensure that their product meets premium market standards. If premium price was not significant (crystal coconut sugar is no longer marketable), cooperative members would likely turn back to producing traditional cast sugar instead of crystal sugar, and traditional cast sugar producers would be less interested in joining cooperatives because it requires extra efforts from both women and men to produce crystal sugar.

LPPSLH began experimenting with the production of crystal sugar prior to 2009, but was unable to attract producers to join a cooperative structure. It was only in 2009, that they were able to link with the premium organic market. The first crystal sugar cooperative (Nira Satria) was established two years after that event, indicating the importance of premium market access and the higher prices offered as being a strong motivating factor behind joining cooperatives.

Information that *rejects* pathway1: none

Pathway 2: External market factors explain the change

Information that *confirms* pathway 2:
Various sources (districts government, cooperatives, and media) acknowledge that without LPPSLH's accompaniment, the outcome would not be achieved. As an expression of acknowledgment, neighbouring Cilacap district government has requested LPPSLH to conduct similar interventions, applying their approach in the district, as they have failed to adopt a successful model themselves. In contrast, CV Inagro Jinawi, a private sector actor founded in 2010 by a former LPPSLH staff member, has successfully replicated the LPPSLH approach and model.

According to LPPSLH's management, the SPO only works with a few other NGOs in providing assistance to cooperatives. These organizations include Penabulu and Agriterra who provide financial management training for Nira Satria. In the districts were Nira Perwira and Nira Kamukten are active, there are almost no other CS actors. As such, the establishment of all three cooperatives should be attributed to LPPSLH.

Information that *rejects* pathway 2: none

Pathway 3: Government's approach and intervention to organise producers

Information that *confirms* pathway 3*:*
Purbalingga and Banjarnegara district governments have supported the establishment of Nira Perwira and Nira Kamukten (specifically in fulfilling administrative and government requirements) cooperatives in 2013, but did not provide such assistance when Nira Satria cooperative was established in 2011.

Information that *rejects* pathway 3:

The government only provided support to cooperative establishment in two of the three districts. This demonstrates that government support is not necessary. In fact, the Purbalingga and Banjarnegara district governments began providing support because they acknowledge the success of Nira Satria. Neighbouring district Cilacap has failed in their own efforts to support crystal sugar cooperatives. They have requested LPPSLH's assistance. This indicates that the government has not been able to develop a successful model on its own.

Pathway 4: Other CS actors' contribution

Information that *confirms* pathway 4: none

Information that *rejects* pathway 4*:*
All confirming evidence for pathway 2 (LPPSLH's approach to organise producers to explain the outcome) automatically rejects this pathway. As such, there is no evidence that without other CS actors' contribution the outcome would not be achieved.

**Conclusions**

Based on an analysis of the evidence confirming or rejecting different pathways, it can be concluded that product marketability is a *necessary* factor for the outcome. But without interventions to organise crystal coconut palm sugar producers, this pathway itself would not be *sufficient*. LPPSLH's mode of approach is *necessary* for the outcome, but is not *sufficient* as it can only be effective with pathway 1. This means that both pathways are parts of a causal package that together are sufficient to produce the intended effect.

There is no evidence that the government has provided significant support to all three cooperatives or that it has developed a successful model elsewhere. There is also no evidence that without other CS actors' intervention the outcome would not have been achieved. Thus, pathways 3 and 4 do not explain the outcome.

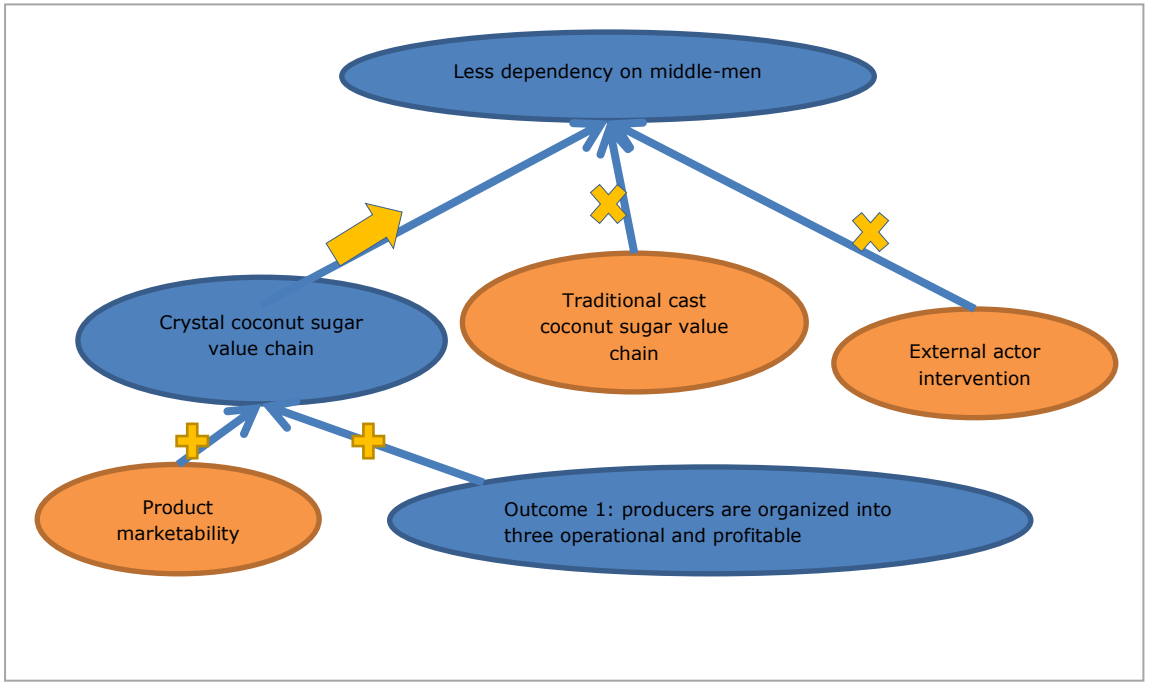
To achieve these outcomes, the role of LPPSLH has been very important. They have created the market outlet, have supported farmers to create and manage the cooperatives and have ensured that an internal quality control system is in place within the cooperatives to ensure the premium quality of the crystal sugar.

### 5.3.2 Outcome 2: Improved position of coconut palm sugar farmers vis-à-vis middlemen

A second outcome achieved is that those farmers that produce crystal sugar have improved their bargaining position vis-à-vis their middlemen with whom they do business for cast sugar. This outcome contributes to 'civic engagement'.

The achievement of this outcome was confirmed by LPPSLH, cooperative members, cooperative staff, middlemen who have become cooperative members, as well as middlemen outside the cooperative. In the old situation, farmers were trapped in non-transparent price setting practices and into a system monopolized by middlemen.

**Causal Pathways**



There are three possible pathways that may explain this outcome:

Pathway 1: Crystal coconut palm sugar value chain

Due to the premium market prices for crystal sugar premium and the organization of around 1,750 small crystal sugar producers into three operational cooperatives farmers have better incomes, reduced debt, or improved marketing options. As such, this pathway specifically positions LPPSLH's contribution in outcome 1 (organising farmers into cooperatives) and product marketability as the explaining causes. To reject this pathway, we need to find evidence that the crystal sugar value chain has not led to increased incomes, reduced debt, or better options for farmers.

Pathway 2: Traditional cast coconut palm sugar value chain.

This pathway challenges pathway 1 by stipulating that the traditional value chain of cast sugar (as opposed to LLPSLH's crystal sugar) itself could have improved the conditions of farmers, making them less dependent on middlemen. To reject this pathway, we need to find evidence that the traditional value chain is not preferred by farmers because it does no offer benefits like debt reduction, price

transparency, or reduced monopoly practices.

Pathway 3: External actors' interventions

This pathway explores the probability that external actors have intervened to reduce producers' debts, promote market transparency, or reduce monopoly practices. To reject this pathway, we need to find evidence that without other the interventions of other actors, the outcome would still be achieved, or that such interventions do not exist.

Information *that confirms or rejects the pathways:*

Pathway 1: Crystal coconut palm sugar value chain explains decreased dependency upon middlemen
Information that *confirms* pathway 1:
The Head of District Department of Industry, Trade and Cooperatives in Banjarnegara reported that Nira Kamukten cooperative members are now in a better position vis-à-vis middlemen, as they now have an option to sell their product to the cooperative. She also added that indebted farmers have the freedom to choose how they process and sell their products.

From the perspective of the producers, it was found that reluctance to pay off debts did not necessarily stem from a lack of financial capacity, but rather from the lack of other options. Now with a better value chain to choose from, farmers stated that their preference for the crystal value chain hinges on better profitability and transparency and non-monopolized practices.

From the perspective of middlemen who choose to join the new value chain, it was found that the traditional value chain created problems not only for farmers but for middlemen themselves. In the traditional value chain, middlemen provide many loans and have problems ensuring debt is repaid, affecting their cash flow. Middlemen who have decided to join the cooperative say that the benefit of better cash flow/liquidity motivated their decision.

Non-member middlemen confirmed that farmers have broader options, as they can choose to sell their product to them or to the cooperative. They also reported a decreased supply (in terms of quantity) of cast sugar since more farmers choose to invest their resources into producing the more lucrative crystal form of sugar. They reported that they considered joining the cooperative to accommodate the preference of the farmers.

The evaluation team also found that cooperative members now have better capacity to pay off their debt to the middlemen using the profit from crystal sugar production. As such they are no longer obligated to sell the sugar they produce to middlemen (at prices fixed by middlemen) as a form of debt repayment.

Regarding the causes that explain this pathway, it was found that the success of the crystal sugar value chain is dependent on the premium price difference. If crystal forms of sugar no longer fetch better prices, farmers will turn to the traditional cast sugar value chain since fewer inputs are required, in particular manpower. It is also clear that without the cooperative organisation (outcome 1), farmers would be unable to produce marketable products (according to premium standards) or access external, export markets.

Information that *rejects* pathway 1:

According to Nira Perwira's management, not all farmers have fully converted to crystal sugar. This is due to several reasons such as limited resources (manpower) and the social and kinship nature of the relations they have with cast sugar middlemen.

Pathway 2: Traditional cast coconut palm sugar value chain explains decreased dependency upon middlemen

Information that *confirms* pathway2:

Rejecting evidence for pathway 1 (crystal sugar value chain) automatically confirms this pathway.

Information that *rejects* pathway 2:

All confirming evidence for pathway 1 automatically rejects that the dependency on middlemen can be reduced through the traditional cast sugar value chain.

Pathway 3: External actors' interventions explain decreased dependency upon middlemen

Information that *confirms* pathway 3: none

Information that *rejects* pathway3:

LPPSLH only works with few NGOs in providing assistance to their cooperatives, namely Penabulu and Agriterra who provided financial management training to Nira Satria. For Nira Perwira and Nira Kamukten, LPPSLH confirmed through the evaluation workshop that there are no other CS actors involved. Moreover, media coverage has exclusively mentioned LPPSLH and Hivos' support as being the driving factors for the cooperative's success.

**Conclusion:**

Pathway 1 provides a *necessary and sufficient* explanation for the decreased dependency of farmers from their middlemen: without the existence of the crystal sugar value chain, the farmers would still be dependent on middlemen and their old practices. The evidence shows that the new value chain offers a rather peaceful solution for both producers and middlemen. Important preconditions that need to be in place for farmers to start producing crystal sugar and hence become independent are the following: in the first place farmers need to avail of the necessary manpower for the premium market product which is labour intensive and their social and kinship relation with the cast sugar middlemen needs to allow for this change in product. In the second place farmers will turn to crystal sugar production if the difference of the premium price to the price of regular cast sugar is significant enough. A third precondition is the capacity of producers to collaborate in a cooperative structure that ensures the product quality.

Pathway 2 does not explain the outcome and the monopoly position of middlemen can only be broken by the creation of alternative value chains. Pathway 3 also does not explain the outcome because the evaluation team did not find any evidence that other actors contributed significantly in creating an alternative value chain or in decreasing the dependency on middlemen.

LPPSLH's role in achieving this outcome is the same as mentioned under outcome one, and no other actors are known to have contributed to this outcome achieved regarding the relation between middlemen and farmers.

## 5.4 What is the relevance of these changes?

### 5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

The goals identified in LPPSLH's Theory of Change (ToC) in 2012 were: 1) sustainable agriculture to build farmers' self-reliance and food sovereignty, 2) improved access and control towards economic resources through micro and small business, and 3) organisational development that makes farmer's organisations independent. The achievements booked since the baseline are in line to these goals in the ToC. The model propagated by LPPSLH is one based on sustainable business development practices that promote organic products and traceability. In essence, LPPSLH has provided services to cooperatives to develop business models for crystal sugar commodities. As described in the previous sections, the cooperatives are becoming more self-reliant although there is still a dependency on LPPSLH. Cooperative members have a better socio-economic position as evident from increased earnings and less dependency on middlemen.

A number of strategies were also identified to achieve the goals of the Theory of Change. Not all of these strategies have been applied. For instance, there is little evidence of concrete efforts to enhance the awareness amongst farmers that would allow them to demand their rights and enhance their participation in the political economy. This element in the ToC has proven to be rather ambitious, especially given LPPSLH's prioritization of creating a more sustainable market and the lack of attention to policy change. What is evident is that community organising has been critical to the achievement of outcomes by LPPSLLH. The strategies applied for this have included direct accompaniment, training, improvement of product quality, development of a participatory quality management system, and a diversification of sugar products.

### 5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

Over the years the contribution of Indonesia's agricultural sector to the country's gross domestic product (GDP) has declined significantly. At current levels, agriculture contributes to around 14-15

percent of the GDP[14], the third largest sector behind industry and services[15]. Although the agriculture has grown at a slower pace than other sectors, it still provides income and employment for 34 percent[16] of Indonesia's households. The agricultural sector is dominated by large plantations and smallholders.

Self-sufficiency is high on the agenda of the Government of Indonesia, especially for crops such as soy beans, sugar, rice and corn[17]. The government has invested in programs aiming to raise the production of smallholders, but it is uncertain whether self-sufficiency will be reached. This presents favourable conditions for interventions in the sugar sector[18.]

Coconut palm sugar production is the dominant domestic industry in the districts where LPPSLH intervenes. In Purbalingga, for example, the palm sugar industry represents 50 percent of the small enterprise workforce with close to 42,000 labourers[19]. The main source of income of households in the region is from sugar production. Income from palm sugar has traditionally been used to meet daily needs. The value chain of traditional cast sugar production involves sugar producers, tree owners and collectors or middlemen. Middlemen often also own the trees tapped by the producers and have complex stratified relations with larger middlemen. Prior to the interventions, coconut palm sugar producers relied more heavily on their relations with middlemen to cover the costs of production and basic necessities. Both men and women are involved in the production process of turning sap into sugar, while men generally are responsible for taking the sap from the trees.

LPPSLH's interventions have deliberately worked to create a new marketing chain rather than cutting out the middlemen. From the data and information gathered in the evaluation process, this approach has been successful. Small-scale producers rely less on middlemen and are able to earn better incomes and are able to generate savings.

However, it is understandable that the impact is still limited. Based on data from the Banyumas Disperindagkop, the palm sugar industry comprises 74 percent of total small-medium enterprises in the district (Banyumas), involving 110,000 workers and 28 cooperatives. Nira Satria, the most successful LPPSLH cooperative, only has around 1,000 members, which is less than 1 percent of the workforce involved in the palm sugar industry of the district.

### 5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

The interventions of LPPSLH fall under the Green Entrepreneurship program focus of Hivos. This program area, Hivos' largest globally, focuses on "enterprising men and women as catalysts for green socio-economic progress"[20]. According to Hivos, LPPSLH contributes to improved capacity of farmer organisations that in turn lead to improved economic positions of small producers and increase rural outreach[21]. Small producers are considered to be marginalised groups with weak negotiating power and a lack of opportunities to improve production processes. In Hivos' 2008 Vision Paper on Civil Society Building, Hivos states that, "In the economic domain it is civil society's role to counterbalance short-term profit policies, and to struggle for long term production policies which are socially and

environmentally sound.[22]" As such, Hivos supports activities related to market participation since it contributes to fairer economic relations.

One of the motivations for Hivos' support to LPPSLH was it focus on sustainable agriculture and women's empowerment[23], although the results of the later are vague. The changes that Hivos considers to be of importance are the improved enabling environment for entrepreneurship that has been made possible through business development services to farmers, ensured by LPPSLH.[24]

## 5.5 Explaining factors

### 5.5.1 Internal factors

In 2013, Hivos assessed the capacity of LPPSLH using the five capacities framework. The assessment scored the core capacities of LPPSLH, with most areas receiving respectable scores of 7 or 8 (9 being the maximum). The following table presents an overview of the scores:

Table 7
*Hivos' assessment of LPPSLH against the 5C framework.*

| Capacity | Description | Score |
|---|---|---|
| | 5 Cs | |
| 1 | The capability to act and commit | Mean score of 7.3 |
| 1.1 | The organisation has a clear purpose and acts on decisions collectively. The leadership is accepted by staff, inspiring, action-oriented and reliable. | 8 |
| 1.2 | The organisation is capable to mobilise sufficient financial resources, and (where relevant) non material resources from members/ supporters. | 7 |
| 1.3 | The organisation is internally transparent and accountable. (Relations between staff, direction and board; quality of decision-making process | 7 |
| 2 | The capability to perform | Mean score of 6.75 |
| 2.1 | The number, composition and expertise of staff is adequate in view of the organisation's objectives and programmes. (Indicate when there is high staff turnover) | 7 |
| 2.2 | The organisation has a coherent and realistic strategic plan. (Context and problem analysis; Theory of Change; quality of formulation of objectives, intended results and indicators; explanation of strategic choices) | 7 |
| 2.3 | The quality of financial and administrative management is adequate. (Budget, funding plan, financial management, financial report) | 7 |
| 2.4 | The organisation has an appropriate monitoring and evaluation process (documentation & data collection, involvement of stakeholders, quality of analysis and learning) and uses it for accountability and learning purposes. | 6 |
| 3 | The capability to relate | Mean score of 8 |
| 3.1 | The organisation maintains relevant institutional relationships with external stakeholders and is seen as credible and legitimate. (Indicate main strategic relationships and collaboration with other actors) | 8 |
| 3.2 | The organisation is accountable to and communicates effectively with its primary constituents/ beneficiaries. (Describe downward or horizontal accountability process; specify for women) | 8 |
| 4 | The capability to adapt and self-renew | Mean score of 6.5 |
| 4.1 | The organisation (management) responds adequately to trends and changes in the context and uses up-to-date strategies and knowledge. | 7 |
| 4.2 | The organisation (management) encourages and supports internal learning and reflection processes. (Conditions, incentives) | 6 |
| 5 | Capability to maintain consistency | Mean score of 7 |
| 5.1 | The organisation is capable to maintain consistency between ambition, vision, strategy and operations. The management is able to deal strategically with external pressure and conflicting demands. | 7 |
| Gender | | |
| Quality 1 | To what extent has the organisation formulated objectives with regard to the position of women and issues of gender equality? | 7 |
| Quality 2 | To what extent does the organisation have internal gender expertise? | 7 |
| Quality 3 | To what extent does the organisation maintain relations with key GW&D actors in its context, e.g. women's movement, women's organisations, gender experts? | 7 |

Source: Hivos Partner Capacity Assessment Form 2013

LPPSLH scores highest in the 'capability to act and commit' and 'capability to relate'. The lowest scores are in the capability to 'adaptor self-renew'. The findings of the evaluation confirm that these scores are justifiable. LPPSLH staff admit that they are still weak in their ability to monitor and evaluate and lack the ability to document lessons learned. However, as explained in Section 5.5.3 below, the evaluation did not find sufficient evidence of LPPSLH's capacity in the area of gender.

The success of Nira Satria, the first sugar cooperative set up by LPPSLH, has become a model for other interventions. With a high level of recognition from the government and farmers themselves,

LPPSLH has been able to replicate the model in other areas, especially since there are clear benefits for both the community and government. LPPSLH has facilitated peer-exchange visits between cooperatives as a means to promote farmer-to-farmer learning. Unfortunately, LPPSLH staff have limitations in their ability to record and document their success. Without these capacities, further support and funding is limited to actors in the target districts who mostly hear about LPPSLH's interventions by word of mouth.

A critical factor explaining the outcome and the changes in civil society is the LPPSLH model. Unlike government forms of assistance, LPPSLH provides intensive community accompaniment during all stages of implementation, from the establishment of the cooperative to day-to-day administration. This has been the reason why LPPSLH has been more successful than public-sector driven interventions. This form of accompaniment requires staff to be highly motivated and a high degree of idealism and belief in the principles of community empowerment. LPPSLH's staff have been able to relate with the conditions of the rural and less-educated sugar producers.

Through P3R, the economic business unit of LPPSLH, the SPO has been one of the factors behind the success of the model. Buyers looking for crystal coconut palm sugar are able to contact P3R to pace orders. P3R plays an important role in linking potential buyers to the smallholders organised through the cooperatives set up by LPPSLH.

### 5.5.2 External factors

Administrative changes at the district level have been a positive factor in support for LPPSLH. In Banjarnegara district, elections led to a new dominant party in the district's leadership. The party that is backing the new head of district comes from the Indonesia Democratic Party of Struggle (PDIP) fraction, a party that has been known for its support to the agricultural sector. The district head is also more approachable than his predecessor, especially since he comes from the same party fraction as the governor who has closer relations with LPPSLH's network.

As described in other sections, LPPSLH's model of intervention depends on premium market valuation of crystal sugar. Up until now, the premium price offers significant profit incentives for the farmers as the demand for the product is still very high, and the premium price has not been very volatile. However, it will be interesting to see how LPPSLH's model would cope if premium export prices dropped and profit margins would be less or equal to traditionally processed sugar market price for a long period. Traditional cast coconut palm sugar prices vary between IDR 5600 – IDR 12.000[25], while crystal coconut palm sugar are of less volatile range between IDR 11.000[26] – IDR 25.000[27] per-kilogram.

### 5.5.3 Relations CFA-SPO

Hivos sees its role as providing input on program development, funding activities, facilitating linkages to other players and monitoring[28]. Hivos has been enthusiastically engaged in the project, as seen from their involvement in signing a tripartite MoU in Banjarnegara. Hivos has received good coverage and exposure in print and electronic media and has been recognized for its support to LPPSLH.

While Hivos has previously supported LPPSLH under a gender thematic focus and has claimed better gender mainstreaming practices, LPPSLH does not implement targeted interventions for men and women. Nonetheless, the development of a product chain for organic coconut palm sugar has been a

[28] "PARTNER CAPACITY ASSESSMENT FORM LPPSLH 1007811 2013", Hivos, 2013, p. 7

Hivos priority[29]. LPPSLH has benefitted from Hivos' support since 2008, and this long-term support is one of the reasons why LPPSLH's interventions now have resulted in economic and social benefits.

According to Hivos the MFS funds allowed for support to be provided to improve the organisational capacity of CS actors. In its agreement with LPPSLH, one of the indicators for success was improved capacity of LPPSLH to manage earned incomes. Unfortunately, in the reports there was no mention of how Hivos or other organisations have supported internal capacity improvements of LPPSLH. A capacity assessment undertaken in 2013 (See 5.5.1) did report an augmentation in all of the SPO's capacity areas.

Hivos has also facilitated LPPSLH's linkage to other organisations through Agri-ProFocus Indonesia, an open network that promotes farmer entrepreneurship and business linkages. Because Agri-Profocus was established in 2013, it may be too early to say how LPPSLH will benefit from this wider network. Of note is that Hivos' 2013 Annual Report for MFS II mentions that Unilever Indonesia has agreed to support the scale-up of small-scale coconut production in the area of quality standards, cost reduction and productivity[30], as a result of Hivos' own initiative. Other areas where Hivos intended to provide support are in developing a quality management system through ICS and in introducing cleaner production facilities and cook stoves. In both of these areas there is an improvement, although the introduction of cleaner production facilities was also supported by the local government.

# 6 Discussion

## 6.1 Design of the intervention

Overall the design of LPPSLH's intervention was found to be sufficient; although the performance indicators agreed upon on the contract between the CFA and the SPO did not all fit well within the logical framework. Notwithstanding, actual work on the ground by LPPSLH was guided by a clear organisational direction and ideas of what results they wished to attain.

There was also a lack of clarity as to how support in the 2011 -2013 period built upon preceding interventions that focused on women's participation in sugar production. In fact, there were no specific interventions targeting women in the project design.

There were also weaknesses in how the performance of the value chains was measured. This is arguably a crucial element of successfully managing business development, even at the small-scale farmer level. Additionally, organic certification of crystal palm sugar requires traceability making this kind of monitoring even more important. In hindsight the SPO would have benefited from a computerized information technology system for improved product traceability. Hivos works with a number of organisations in the area of ICT, and it is unfortunate that no linkages were created with such organisations.

LPPSLH's ToC had an implicit assumption that unfair markets are the cause of structural poverty. While the SPO successfully developed closer relations with the government, and as a result, an insurance scheme has been initiated by the government in collaboration with a provincial government-owned bank (Bank BPD Central Java). While LPPSLH's model has seemingly influenced the prioritization of sugar in agricultural development plans at the district level, the project would have benefited from clearer actions to influence and assist the formulation of such plans. This would help to ensure that successful models are fed back into policy development and that an enabling environment helps to sustain the improved conditions of sugar producers.

LPPSLH itself has shown that it is capable to replicate the model of creating cooperatives of palm sugar farmers in other districts, as well as a former staff of LPPSLH. Efforts of the Cilacap district to put in place a similar structure however failed (reasons unknown).

Important conditions that need to be in place are the existence and access to premium markets, a project duration of some 3 to 4 years and organisational competences needed. Apart from these, the management of the relations between middle-men and small scale coconut palm sugar producers is another key factor for success.

# 7 Conclusion

Since the baseline, LPPSLH has contributed to changes in the organisation and position of small producers. Organised through three cooperatives, sugar producers have been able to benefit through the diversification of coconut sugar products and the creation of an alternative value chain. This in turn has brought benefits to some 1,749 (2013) farmers in terms of improved income generation and less dependency on middlemen who controlled the traditional value chain. The success of LPPSLH's model hinges on the ability to provide intensive accompaniment and access to profitable export markets for crystal sugar. Rather than cutting out the middlemen in the value chain, LPPSLH has introduced alternatives for sugar producers.

The cooperative model itself offers an opportunity for farmers to be involved in decision-making since institutionally they are independent of LPPSLH. More support is probably needed to make the cooperative fully self-reliant, but this is makes good sense since two of the cooperatives were officially established in 2013. Notwithstanding, there is general satisfaction amongst beneficiaries of the benefits they now enjoy as cooperative members.

LPPSLH's approach has garnered significant interest and acknowledgement at the district as well as the national level. The cooperatives LPPSLH helped establish have been recognized for their sustainable business practices and farmer-based initiatives through a number of awards. A number of actors have begun to replicate the production and marketing of crystal coconut sugar. Neighbouring districts, like Cilacap have also taken a keen interest and have requested LPPSLH's assistance after their own interventions failed to generate the same level of success. Although the interventions of LPPSLH did not touch upon direct policy influence, they have influenced the government's attitudes towards coconut sugar, which is now seen as a viable agricultural product worth prioritizing. Organisationally, LPPSLH has bene able to capitalize on government interest, generating more public sector funding and support for its coconut sugar program. In addition, there has been an emergence of more private sector actors in the area of crystal coconut sugar production.

These changes, particularly the replication of Nira Satria's success to two other districts can be attributed to Hivos and MFS II support. As a result, more sugar producers now have an opportunity to improve their socio-economic conditions. Overall the interventions and results achieved are relevant to the context in which the SPO is operating, as well as to the organisational visions and missions of both LPPSLH and Hivos. Small scale coconut sugar producers now have better relations with public sector actors and are in a better position with the introduction of new means of production and access to markets.

Table 8
*Summary of findings*

| When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements? | Score |
|---|---|
| The CS interventions were well designed | 7 |
| The CS interventions were implemented as designed | 7 |
| The CS interventions reached their objectives | 7 |
| The observed outcomes are attributable to the CS interventions | 7 |
| The observed CS outcomes are relevant to the beneficiaries of the SPO | 8 |

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

# Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration
- 1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

| Dimension | | Indicators | Question | Change |
|---|---|---|---|---|
| **Civic engagement** | 1 | Needs of marginalised groups | How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies? | +1 |
| | 2 | Involvement of target groups | What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities? | +1 |
| | 3 | Political engagement | How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups? | -1 |
| | | | | |
| **Level of organisation** | 5 | Relations with other organisations | In the past 12 months what has been the most intensive interaction you had with other CSOs? | +1 |
| | 5 | Frequency of dialogue with closest CSO | In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with? | +1 |
| | 6 | Defending the interests of marginalised groups | Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs? | +1 |
| | 7 | Composition current financial resource base | How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking? | +2 |
| | | | | |
| **Practice of Values** | 8 | Downward accountability | To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them? | +1 |
| | 9 | Composition of social organs | What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for? | 0 |
| | 10 | External financial auditing | How regularly is your organisation audited externally? | +1 |
| | | | | |
| **Perception of impact** | 11 | Client satisfaction | What are the most important concerns of your target groups? How do your services take into account those important concerns? | +1 |
| | 12 | Civil society impact | In the past 12 months, what impact did you have on building a strong civil society? | +1 |
| | 13 | Relation with public sector organisations. | In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives? | +2 |
| | 14 | Relation with private sector organisations | In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective? | 0 |
| | 15 | Influence upon public policies, rules, regulations | How successful have you been in influencing public policies and practices in the past 2 years? | +2 |

| | | | | |
|---|---|---|---|---|
| | 16 | Influence upon private sector agencies' policies, rules, regulations. | How successful have you been in influencing private sector policies and practices in the past 2 years? | 0 |
| | | | | |
| CS context | 17 | Coping strategies | In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society. | +1 |

# Appendix 2 Changes in civil society indicators between 2012 and 2014

## 4.1 Civic Engagement

### 4.1.1 Needs of marginalised groups SPO

The LPPSLH program supported by Hivos in the 2011-2013 period initially targeted only Banyumas district. LPPSLH was able to expand to two new districts, Banjarnegara and Purbalingga, where two cooperatives were set up following the success in Banyumas. This means that their interventions now cover more people over three districts. Furthermore, LPPSLH has been approached by the local government of Cilacap to replicate similar interventions, with government corporation support. In general the interventions of LPPSLH benefit small-scale, landless sugar producers. The sugar producers in the area are enthusiastic about LPPSLH and many more want to join the cooperative.

LPPSLH assisted the organisation of farmers into cooperatives. All three cooperatives are multi-purpose cooperatives (KSU) with roles in organising farmer groups, training them on agribusiness practices & financial management, monitoring, certifying the sugar products, allocating income for savings, and assisting members to pay off debts. As such, the cooperatives have provided additional services/benefits for the famers, beyond just functioning to generate profit. The cooperative structure has been selected as a means for civic engagement, where farmers have access and control over the production process and can defend their interests. Through the cooperatives, the quality of organic palm sugar produced by smallholder farmers has been improved and the cooperative has facilitated market access.

The membership increase of the three cooperatives is illustrated in the table below.

Table 9
*LPPSLH cooperative membership 2011-2013*

| Name of cooperative | # of members in 2011 | | | # of members in 2012 | | | # of members in 2013 | | |
|---|---|---|---|---|---|---|---|---|---|
| | Male | Female | Subtotal | Male | Female | Subtotal | Male | Female | Subtotal |
| Nira Satria | 34 | 12 | 46 | No specific data | | | 739 | 331 | 1,070 |
| Nira Kamukten | Not yet established in 2011 | | | 25 | 5 | 30 | 175 | 124 | 299 |
| Nira Perwira | Not yet established in 2011 | | | 30 | 5 | 35 | 260 | 120 | 380 |
| TOTAL | 34 | 12 (26%) | 46 | 55 | 10 (15%) | 65 | 1,164 | 575 (33%) | 1,749 |

Table 10
*Landownership of members*

| Name of cooperative | # of land owners | percentage | # of landless | percentage | Subtotal |
|---|---|---|---|---|---|
| Nira Satria (2013) | 261 | 24% | 809 | 76% | 1,070 |
| Nira Perwira (2014) | 101 | 25% | 300 | 75% | 401 |
| Nira Kamukten | No data | | | | |

Source: Project reports and interviews

Hivos regarded LPPSLH's intervention as a means to strengthen women's roles and improve their market access since women play an important role in the production of palm sugar. As illustrated in the table above, cooperative membership has been open to women as well as men, with 33 percent of women as members in the cooperative structure in 2013. LPPSLH's management claims that women

have been able to improve income generation (as small-scale palm sugar production requires males and females within one household to cooperate). LPPSLH also promoted women's representation in the cooperative management structure. However, there's no evidence of LPPSLH's achievements with regards to empowerment since there are no indicators that track the benefits for men and women separately.

From the table above, we can also infer that landless farmers have been able to benefit from cooperative interventions. The percentages of landless farmers is 74 – 75 percent in the cooperatives of Nira Satria and Nira Perwira. This is a significant difference with members owning land.

### 4.1.2 Involvement of target groups SPO

The involvement of the target groups has increased at the level of the cooperatives. The farmers themselves make up the executive management of the cooperatives set up by LPPSLH. At the start of the initiative the newly set up cooperative had minimal management and organizational skills. With intensive LPPSLH support, they have been able to strengthen these skills, as well as broaden their networks. This has made cooperatives more independent. For example, the executive management of Nira Satria, a cooperative set up in 23 December 2011[31]in Banyumas District, is attracting the attention of new buyers and has received a recognition award from former president Yudhoyono.

Cooperatives hold regular meetings at least every three months and have a general assembly meeting to discuss planning and progress achieved. The internal relation between more 'elite' or persons with more influence and regular members seems to be healthy and democratic. For example, the management personnel of Nira Perwira was replaced due to their poor performance rather than because of a favouritism or the influence of those with more power at the village level.

LPPSLH also maintains an institution-to-institution relationship between themselves and farmers' cooperatives. The accompaniment strategy of LPPSLH is nonpartisan, by which the SPO promotes the independence and self-sufficiency of cooperatives by ensuring they perform properly and have linkages to the government.

### 4.1.3 Intensity of political engagement SPO

In comparison to the baseline assessment that states that LPPSLH is engaging politically to improve operational rules and regulations for producers, such as for permits to establish market outlets and for the simplification of obtaining a business permit for cooperatives, LPPSLH is currently less politically engaged.

LPPSLH's focus is on improving conditions for small producers and farmers, making political engagement less of a priority unless farmers' issues require political engagement. During the end line assessment, relations with the local government were found to be conducive. Since 2012, relations with the district leader in Banjarnegara have improved, but this is mainly due to external factors (his vision accommodates LPPSLH's initiatives and he is more approachable than his predecessor). Although there's no explicit rule to forbid cooperative members from political engagement, the cooperative generally does not see themselves as interested with such engagement. Their focus is on improving conditions for palm sugar farmers and producers. This is also in accordance with the existing regulatory framework, whereby cooperatives should function to develop economic potential of its members and community[32].

By law cooperatives are business entities, whose activities are based on principles of cooperation and family values with a critical function to promote economic and social welfare. Although there are no articles in the cooperative Law No. 25/1992 that ban political engagement, this law stipulates that management of the cooperative is democratic and membership is voluntary and open[33]. The definition

[31] Fedep Banyumas, Profil, "Koperasi Nira Satria". Available from http://www.fedepbanyumas.com/index.php/profil/koperasi-nira-satria (accessed 19 December 2014)
[32] Sriro, Andrew I. 2006. *Sriro's Desk Reference of Indonesian Law*. Equinox Publishing
[33] Indonesia. 1992. Undang-Undang Republik Indonesia Nomor 25 Tahun 1992 tentang Perkoperasian. Available from http://perundangan.pertanian.go.id/admin/uu/UU-25-92.pdf (accessed 19 December 2014)

of a cooperative and cooperative principles in the law contain elements of neutrality although they are not specified.

## 4.2 Level of organisation

### 4.2.1 Relations with other organisations SPO

The relations between LPPSLH and other CSOs generally remain the same since the baseline. They still coordinate and cooperate with the same organisations such as consortium KRKP (*Koalisi Rakyat untuk Kedaulatan Pangan Tani*) based in Bogor (as a coalition member) and Organic Farming Network (*Jaringan Kerja Pertanian Organik* or Jaker PO), AOI (Aliansi Organik Indonesia), as well as *Asosiasi Pendamping Perempuan Usaha Kecil* (ASPPUK). The notable change is that LPPSLH has become the coordinator of Komunitas Rembug Tani since 2013. This coalition promotes organic farming and food security in five districts (Banjarnegara, Purbalingga, Banyumas, Cilacap and Kebumen).

Since 2013, LPPSLH, through Hivos as a member of Agri-ProFocus, has been engaged in so-called Agri-Hubs set up to promote farmer entrepreneurship[34]. Agri-ProFocus Indonesia is an open network with members working with agricultural products like coffee, cocoa, palm sugar, rice and others. The coalition has a joint agenda with four focus areas: youth in farming, access to finances, increasing market access and sustainable development models and services.[35] Because activities commenced in 2014, it is too early to say how LPPSLH will benefit from this wider network.

### 4.2.2 Frequency of dialogue with closest civil society organisations SPO

The collaboration and cooperation between LPPSLH and other CSOs (KRKP and Komunitas Rembug Tani Jawa Tengah) has become more regular (once a month). With regards to the palm sugar sector, LPPSLH does not involve other NGOs/CSOs, with the exception of Agriterra in providing financial training in Banyumas district. LPPSLH's staff however have a wide network with other NGOs/CSOs on a range of issues.

### 4.2.3 Defending the interests of marginalised groups SPO

LPPSLH has been able to defend the interests of more people since the baseline as the initial pilot cooperative in Banyumas has grown and LPPSLH has successfully replicated the model to two new districts, reaching more small-scale sugar producers. The majority of the cooperative members are small producers who do not own land. Cooperatives have also successfully included small middlemen into their ranks, and even middlemen who have not joined the cooperative do not rule out that possibility of joining the cooperative in the future[36].

LPPLSH is basically creating a new export-oriented market of a diversified palm sugar product (also familiar as "crystal coconut or palm sugar"), as an alternative to the traditional palm sugar market (also familiar as "cast coconut or palm sugar") which is dominated by middlemen. In doing this, they have widened the options for palm sugar farmers to produce or sell their palm sugar. LPPSLH is not in a position to eliminate middlemen but to challenge their monopoly. LPPSLH initially met some resistance from middlemen who were afraid of decreasing traditional palm sugar inputs. To overcome this challenge, LPPSLH communicated with middlemen regularly and provided opportunities to integrate middlemen in the new palm sugar value chain. Middlemen buy sugar from farmers with a controlled margin, allowing middlemen to continue with their own economic activities.

[34] Agri-ProFocus. 2013. *Promoting Farmer Entrepreneurship, Multi-stakeholder workshop: Setting the Agenda for Agri-Profocus Indonesia*. Bogor, 2 – 4 October 2013
[35] Agri-Hub Indonesia. 2014. *Annual Report 2013 Agri-Profocus Partnership*. Jakarta
[36] Interview with Suratman, Middleman non beneficiary, Purbalingga, 11 August 2014

LPPSLH's management reported that non-cooperative members have tried to produce crystal sugar, but most of them discontinued the practice since they do not have the ability to market their product according to certain standards. LPPSLH admits that their model requires intensive community accompaniment, access to premium market, and rigorous quality control. Without strong farmers' organisations (via the cooperatives), quality control would not be possible. The cooperatives' quality control unit, known as ICS (Internal Control System), are trained farmers who are responsible to regularly monitor whether crystal sugar is produced in compliance to international export standards. LPPSLH believes that a participative farmer-to-farmer approach is required in addition to control by external actors. Economic incentives are not sufficient guarantees for full compliance by the farmers. Rather, success also requires a social incentive based on principles of solidarity, or belonging. As such, cooperatives have been the most suitable model of choice for LPPSLH.

The inclusion of middlemen has been one of the keys to LPPSLH's successful approach. The relations between middlemen and farmers have a long history and are complex, without instant solutions. Middlemen are often the relatives of producers they buy sugar from or religious leaders. They themselves are sometimes economically vulnerable due to accumulated debts owed to them by farmers, which become sizeable liabilities for them (especially smaller middlemen). In practice, middlemen are still in a position to control prices, especially amongst farmers who they loaned money to. These farmers have little option but to sell their products to middlemen as a means to pay off debt. The inclusion of middlemen has prevented any negative impacts on the social structure, and offers a solution for both farmers and middlemen deadlocked in debt problems. From the evaluation team's interviews with several middlemen, it is evident that while middlemen who join the cooperative can no longer control prices, they prefer the cooperative arrangements as it gives them a more secure cash flow.

### 4.2.4 Composition financial resource base SPO

In the baseline report, it was stated that 43 percent of Hivos' funds were being used to cover salary costs of LPPSLH's field facilitators. Given that one of the key elements of their model is intensive accompaniment for the cooperatives, and that this model has led to benefits for small-scale producers, the investment in salary costs has been pragmatic and worthwhile.

In their work with palm sugar farmers, LPPSLH has not been able to diversify funding sources since the baseline. Hivos, local governments, and LPPSLH's own contribution continue to be the resource base for interventions. In 2011-2012, Hivos' support constituted 35 percent of the total budgets, the government 41 percent, and LPPSLH 24 percent[37]. The internal contribution has been made possible through LPPSLH's business divisions and activities, which include car rental, consultancy, and *Pusat Pengembangan Produk Rakyat* (P3R) as the main buyer of palm sugar products from the cooperatives.

With the current resource base, LPPSLH's support to the cooperatives could be sustained even without external donor funding. LPPSLH's director reported that the SPO has agreed to follow up a request from the district of Cilacap to assist in the establishment of cooperatives in the area. Cilacap officials met with the Banjarnegara's Department of Industry, Trade and Cooperatives (Disperindagkop) when this evaluation was taking place, leading to the agreement to collaborate. Funding for further replication to Cilacap will come from the district government and CSR programmes of state-corporations'.

The institutional audit for the 2013 financial year does not provide detailed information regarding funding for other LPPSLH projects such as USAID (HIV/AIDS), Ford Foundation (Agroforestry). LPPSLH has been attracting more prominent donors for their HIV project in addition to the existing PKBI-Global fund. Based on the financial audits of 2012 and 2013, it can be seen that HIV/AIDS has been one of LPPSLH's major projects on par with the Hivos-funded palm sugar project in terms of funding amounts.

Regarding LPPSLH's intermediary organisations, the cooperatives have become more financially independent. General Assemblies are conducted by the cooperatives on an annual basis, paid for

[37] "1002298-Audit Review-FY12", Hivos, 2012

through their own funds. However, they still require LPPSLH to fund routine certification and quality inspection, monitoring, and promotional activities.

## 4.3 Practice of values

### 4.3.1 Downward accountability SPO

LPPSLH, through the cooperatives, has applied transparency principles well. Cooperative members are informed of the financial conditions and have the right to inquire with the cooperative on these issues or to express their ideas in the general assembly. Cooperative members are also aware of the prices of palm sugar on the international market and profit-sharing mechanisms. The same system has been applied in the cooperatives since the baseline, so there are no changes in how LPPSLH applies accountability.

In LPPSLH itself, there was a change in the position of director in 2013 and also an improvement in the structure of the organization by separating the functions of the executive and the board. During the baseline, the LPPSLH director was also a board member. At present, the new director is no longer part of the board and he reports to the board regularly (every three months). The previous director is now only a board member.

### 4.3.2 Composition of social SPO

From the baseline, up until now the composition of the social organs of LPPSLH remains the same. There are no community members or other persons representing marginalized groups in the social organs. Of note, is that new board members were selected in 2013. LPPSLH chose individuals with significant experience in assisting marginalized groups to become board members, bringing in to some degree a beneficiary perspective into the board. There were no major differences in diversity observed in the mandatory social organs compared to the baseline.

### 4.3.3 External financial auditing SPO

LPPSLH institutional audits have been conducted by professional auditors the fiscal years of 2012 and 2013, in addition to regular project-based audits. This is an improvement compared to baseline findings, especially given that LPPSLH has conducted such auditing using their own funds[38]. Audit of the cooperatives are done by the local cooperative department, as part of reporting material for the annual general assembly. External audits of the cooperative will be conducted within the next year.

## 4.4 Perception of impact

### 4.4.1 Client satisfaction SPO

The beneficiaries are more satisfied with the services delivered than during the baseline. Cooperative members have benefitted from a number of advantages, such as: 1) new knowledge and skills that have allowed them to diversify palm sugar products offered through continuous accompaniment and training provided by LPPSLH; 2) increased earnings; 3) producing a product with a clear international market demand; 4) cooperative and member savings; and, 5) a broadened network. The newly established cooperatives have a large potential membership base as many community members are interested in joining.

As of 2012, LPPSLH reported that 520 Nira Satria cooperatives members' incomes have increased by 35 percent from selling palm sugar, and 30 percent from using energy-efficient furnaces. The

[38] "LPPSLH Budget final", LPPSLH

cooperative insurance scheme has covered 7 members who suffered from work accidents. Nira Satria cooperative was able to sell 12 tons of palm sugar a month, with a net profit around 3,000 USD/month from their business[39]. It is safe to assume that currently production and profit have further increased along with the expansion of Nira Satria's membership (see 1.1). In 2013, Nira Satria was able to contribute 50 percent of the costs for certification.

From the evaluation team's interviews with Nira Kamukten cooperative members, it is reported that farmers' incomes before joining cooperatives was approximately IDR 975,000/month. Now they can earn up to IDR 1,680,000/month. In 2012, the Nira Kamukten cooperative had no savings. Total savings currently amount to IDR 120,000,000.[40]Meanwhile, Nira Perwira cooperative members reported that on average, their members have individual savings amounting to around IDR 6 million. The savings can be withdrawn partially once a year (during Ied Mubarak), to ensure it is properly used41.

From the perspective of cooperatives' middlemen, they benefit from better cash flow compared to the traditional palm sugar value chain. Having a large base of borrowers, or using their power to dominate pricing, has fewer benefits for them than joining the cooperative. From the perspective of middlemen, who have not joined the cooperatives, there is an interest in joining the cooperative, but they have not done so because they are not fully aware of the potential benefits. Nira Perwira, established in 2012 and officiated in 2013, said that they are currently not prioritizing member mobilization as they want to first ensure their system is well established.

### 4.4.2 Civil society impact SPO

Since the late 90s, LPPSLH has been involved in strengthening community organisations in Java and encourage their independence. Since the baseline, the number of cooperatives and cooperative members has increased. Two additional sugar cooperatives were established and LPPSLH has provided continuous support to help establish good functioning mechanism within the cooperatives. This has included several aspects such as financial management and other cooperative principles. LPPSLH's interventions also helped build confidence of members to engage with external actors, especially with government officials. Through the cooperative, community members are organized to attain a better economic and social status. This has become evident through better earnings and a better position vis-à-vis middlemen (as described in 2.3).

An improved position vis-a-vis middlemen is an interesting impact to look at as it reflects social mobility, which is a required precondition for a fair, democratic, and inclusive society[42]. However, it is understandable that the impact is still limited. Based on data from the Banyumas Disperindagkop, the palm sugar industry comprises 74 percent of total small-medium enterprises in the district, involving 110,000 workers and 28 cooperatives. Nira Satria, the most successful LPPSLH cooperative, only has around 1,000 members, which is less than 1 percent of the workforce involved in the palm sugar industry of the district.

LPPSLH's management reported that farmers outside the cooperatives have tried to produce crystal sugar, but most discontinued due to an inability to market quality products. LPPSLH's model requires intensive community accompaniment, rigorous quality control, and access to premium markets. As such, it is unlikely that farmers –albeit organized - can benefit from producing crystal sugar without external assistance.

As the intensity of cooperatives' relation with the government is increasing, there is concern from LPPSLH's management that there may be a negative backlash for the cooperatives as governments become more engaged. Government practices are well known to often disregard participative values, be co-optative, and are often considered to be identical with corruption and collusion. The evaluation

[39] "Annual Review LPPSLH 2012_Hivos_Banyumas". Hivos, 2012, p. 7

[41] Kharisma Prasetyo, "FGD with Nira Perwira", MFS-II evaluation 2014
[42] Ransford, 1980: 491

team found that there is ground for such concerns. Nira Perwira cooperative was compelled to pay unexpected additional costs to a government-appointed contractor assigned to build a central palm-sugar processing unit for the cooperative, threatening to stop the construction progress if they refused to do so[43].Other than this case, the evaluation team did not find further evidence of similar forms of extortion or threats.

### 4.4.3 Relation with public sector organisations SPO

In May 2013, a tripartite MoU was signed between LPPSLH, the local governments of Purbalingga and Banjarnegara, which laid the groundwork for conducive relations with the government. This was different from Banyumas, where LPPSLH has had interventions for a longer period. During the previous district administration, relations were less conducive. Fortunately, with election of a new district head in April 2013, the Banyumas government has become more approachable and is open to supporting community-oriented development programs.

In Purbalingga and Banjarnegara, where the two new cooperatives were more recently established, LPPSLH is seen as exemplary by the local government. The local government has high expectations that it will be able to replicate LPPSLH's success in Banyumas where the cooperative has been exporting palm sugar and making palm sugar a flagship product in their district. LPPSLH enjoys government recognition and is often approached by the district government. The local government of Cilacap, the neighbouring district, has often solicited LPPSLH's assistance to establish similar cooperatives. LPPSLH have agreed to respond to this request, although knowing that they might have to do it without donor support. The Cilacap district government convinced LPPSLH that there will be enough resources available from the district budget and CSR funds from a state corporation[44].

Overall, the relations between LPPSLH and the local government have improved. Specifically, LPPSLH maintains relations with district offices that work on similar issues like the Office for Cooperatives and SMEs, Forestry, and Agriculture. The district Office for Cooperatives and SMEs (Dinas Koperasi dan UMKM, in some districts Disperindagkop) has been able to learn from LPPSLH's success in supporting cooperatives. LPPSLH is now perceived as a competent extension agent that can help the government, fill its gaps in intensive accompaniment and marketing skills[45]. The government also admits that from their cooperation with LPPSLH, they have learned to take on a new attitude towards NGOs, whom they perceived of negatively in the past[46].

As previously mentioned, the cooperative members themselves feel more confident in approaching and engaging local government. Government officials are often invited directly by the cooperative to attend meetings and discussions. On the other hand, government officials also often invited cooperative leadership, or invited other district government to visit the cooperative, for public relations or learning activities.

### 4.4.4 Relation with private sector organisations SPO

LPPSLH's cooperation with PT.HOLCIM via a CSR scheme for Nusakambangan forest rehabilitation ended in 2013. LPPSLH has not had cooperation with the private sector since. However, as mentioned in 4.3, in the future LPPSLH is likely to receive CSR funds from a state-corporation based in Cilacap to replicate its successful palm sugar cooperative model in this district. However, there is no further information available since LPPSLH is still awaiting a formal agreement with the head of Cilacap's Department of Industry, Trade and Cooperatives.

Institutionally, LPPSLH is not active in the private sector. But LPPSLH's parent foundation's business unit, *Pusat Pengembangan Produk Rakyat* (People's Product Development Center or P3R) does. P3R was initiated in 1995; they source their produce through the cooperatives (the cooperatives are free to sell to others buyers). The cooperatives prefer to sell to P3R that offers a premium price. P3R

[43] Kharisma Prasetyo, "FGD with Nira Perwira", MFS-II evaluation 2014
[44] Ibid
[45] Ibid
[46] Interview with Agus Riyanto, Industry Division Head Disperindagkop Banjarnegara, Banjarnegara, 11 August 2014

purchases certified sugar from the cooperative (at IDR 12,000/kg), which is then sold to an exporter. On the international market, palm sugar can fetch a price of between IDR 20-25,000. It is estimated that P3R sells the sugar for IDR 15,000-20,000/kg. Some of the profits go back to LPPSLH's parent foundation that also has a car rental and a construction consulting business unit.

P3R is currently selling at least 90 tons of crystal palm sugar a month[47], of which mostly is exported to America, Europe, and Japan. This is an improvement from 2012 when they were only able to sell 20 tons/month, indicating P3R is growing into an important market actor. Outside P3R, other prominent crystal sugar sellers are: CV.Inagro Jinawi, KUB Manggar Tuwuh, UD Nira Asli Cilongok, KUB Sari Nira Food, KUB Sari Bumi Purbalingga, and KSU Jatirogo Kulonprogo. For comparison, KSU Jatirogo (another Hivos grantee) sells 150 tons/month[48], while CV.Inagro Jinawi (ex-LPPSLH staff) sells 80 tons/month[49]. LPPSLH also continues working with a palm sugar exporter company PT. Kampung Kearifan Indonesia (PT KKI), PT Big Tree Farm and PT ALM, however, there is no information on influence to private sector agencies' policies and practices.

Although P3R is increasingly becoming a more important market player, from P3R's perspective, there is no competition with other producers or sellers as they have not yet been able to meet their own quota (200 ton/month). Moreover, the organic certification system stipulates a fixed value chain to enable product tracing, such that each seller has their own designated area or farmer groups. In this scheme, direct competition to source palm sugar is less likely.

### 4.4.5 Influence upon public policies, rules, regulations SPO

LPPSLH's cooperative model has become well known and an example to the government on how to stimulate economic activities amongst small sugar producers as well as how to establish a functioning cooperative. This has led to more support from the government to the cooperatives. For instance, the District Department of Industry, Trade and Cooperatives waved registration costs for Nira Perwira and Nira Kamukten. The Department of Agriculture supported the cooperative with production tools. The Department for Trade and Industry also provided production tools, assisted in certification and built a central processing unit for Nira Perwira. In addition, the cooperatives have been invited to national and international events to promote crystal sugar as a local product. This outcome has been achieved as a result of LPPSLH's relations with the government, and from the success of LPPSLH's model, which has received media exposure and awards, including:

- 2011, Manggar Manis group (a group under Nira Satria Cooperative) was recognized with the *Ketahanan Pangan Adhikarya Pangan Nusantara* (Food Security) award by former President Yudhyono.
- 2013, Nira Kamukten Cooperative was chosen as runner up of *Kewirausahaan Sosial Berbasis Komunitas*(Community-Based Social Entrepreneurship) competition, British Council.
- 2013 Nira Kamukten Cooperative took first prize in the same competition.

LPPSLH has successfully influenced the government and created awareness amongst government officials to see crystal sugar as a potential product from Indonesia[50]. In prioritizing plans for small-scale district industries, Banjarnegara's Development Planning Agency (Bappeda) used to focus on the

ceramics industry, a popular, yet less prospective sector. Purbalingga in the past promoted a Korean-owned cosmetics industry. Now both have prioritized palm sugar as their district priority product, upon realizing that the large majority of small industries are in this sector. District offices in turn have shared their success with other districts in the provinces through promotional activities. As a result, Cilacap district followed in their steps, even trying, unsuccessfully, to develop their own crystal sugar production before finding out that LPPSLH's expertise would be of benefit to them. In their attempt to leverage crystal sugar production, the Cilacap district government has lobbied for CSR support.

In addition, LPPSLH successfully influenced the local government in 3 districts (Banjarnegara, Banyumas and Purbalingga) to protect the palms and coconuts used for the production of crystal sugar from an overuse of chemical fertilizer. As a result, the governments have also campaigned to reduce the utilization of chemical fertilizer on other crops, such as rice, as contaminants could spill into the organic coconut plantation area. The organic certification, of which crystal sugar marketing depends upon, requires such rigorous standards.

### 4.4.6 Influence upon private sector agencies' policies, rules, regulations SPO

Although LPPSLH contributes to the emergence of new and important actors in the crystal coconut sugar industry and market (thus contribute to its overall growth), the traditional cast sugar industry or market is not affected. Based on data from the Banyumas Department of Industry, Trade and Cooperatives, crystal sugar production in 2011 was only 0.58 percent compared to cast coconut sugar. With such small production ratios of crystal sugar, it is obvious why traditional cast sugar production is still unaffected. Moreover, crystal sugar products are predominately produced for an export market, while cast sugar is mainly for domestic consumption51.

In 2013, the Ministry of Industry supported crystal sugar production in Banyumas, Purbalingga, and Banjarnegara with hygienic upgrades in the production. A ceramic tile corporation, PT Arwana Citramulia Tbk, supported the government in their efforts through a CSR scheme[52]. This case, in additional to plans of the Cilacap district government to obtain CSR support (as discussed before in 4.4), demonstrates that more private sector companies are willing to support small-scale crystal sugar producers through CSR initiatives. Although this support is not caused by LPPSLH's direct interventions, LPPSLH's improved relation and influence on the public sector has allowed this to happen.

Another finding of the evaluation is that LPPSLH initiatives have resulted in the emergence of more diversified actors in crystal coconut sugar production. In 2010, an ex-LPPSLH staff member decided to found her own crystal coconut sugar business, CV.Inagro Jinawi. Its current aggregate production is even larger than LPPSLH's P3R. CV.Inagro Jinawi's founder adopted the knowledge and practices gained from her experience with LPPSLH in her approach, although without founding cooperatives. CV Inagro Jinawi is supporting a farmer group called Nyiur Sejahtera, comprising of 748 members in 3 villages[53]and has been recognized though an award from the Ministry of Agriculture in 2013. In Cilacap, the district government attempted to support the production of crystal sugar on its own accord. They intend to obtain CSR support to commission LPPSLH's support in the near future. These cases illustrate that with an unfulfilled market demand for crystal sugar, private sector actors have an interest in replicating LPPSLH's success.

## 4.5 Civil Society context

### 4.5.1 Coping Strategies

In mid-2014, the 2012 Law on Cooperatives was annulated through a Constitutional Court decision. This means that the law currently recognized is the predeceasing Law. No. 25/1992. The regulatory change is considered by many as an indicator of the government's intention to protect and support cooperatives[54] as it provides clearer distinctions between cooperatives and corporations (i.e. source of capital, accountability mechanism). To cope with this change, LPPSLH has helped the cooperative administration to comply with the policy although for the cooperatives the change in legislation did not have a significant impact since they did not use cooperative capital certificates to generate capital (such a scheme was allowed under the annulated law).

With regard to potential negative impacts resulting from more intensive relations between the cooperatives and the government (as discussed in 4.2), LPPSLH has asked their field facilitators to pay more attention to issues regarding cooperative transparency and accountability.

Report CDI-15-060

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Klaver, D.C., Smidt H., Nugroho, K., Larastiti.C, February 2015, *NTFP-EP end line report; MFS II country evaluations, Civil Society component,* Centre for Development Innovation, Wageningen UR (University & Research centre) and SurveyMETER. Report CDI-15-068. Wageningen.

This report describes the findings of the end line assessment of the Non Timber Forest Product-Exchange Programme (NTFP-EP) that is a partner of IUCN and a part of the Ecosystem Alliance.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses NTFP-EP's contributions towards strengthening Civil Society in Indonesia and it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which NTFP-EP contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain NTFP-EP's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

# 1 Introduction

This report presents the civil society end line findings of NTFP-EP in Indonesia which is a partner of IUCN under the Dutch Consortium Ecosystem Alliance. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study, NTFP-EP is working on MDG 7.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch Co-Funding Agencies (CFA) and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

*Changes in the civil society arena of the SPO*
In the 2012 – 2014 period, the most important change that took place in the civil society arena of the SPO are related to civic engagement: NTFP-EP managed to increase membership of groups that engage in the production and sales of NTFP products with 13 percent, whilst at the same time increasing their income from € 53 in 2012 to € 137 in 2013. However, participation of women in a participatory certification system for rattan product, as well as their participation in community eco-cultural mappings is marginal.

Another change that was realised with regards to the 'perception of impact' dimension, in particular in relation to local policy influencing, consists of communities having made their eco-cultural mappings as a means to influence districts in charge of spatial planning. On one occasion this helped to refute a demand by a palm oil company.

Also of note is that with regards to Practice of Values, NTFP-EP has undergone an institutional transformation in mid-2012 becoming an independent foundation. This has arguably led to better accountability.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with NTFP-EP, and interviews with external resources persons working in civil society organisations that receive support from NTFP-EP; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

*Contribution analysis*
Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. NTFP-EP was amongst those SPOs selected for in-depth-process tracing.

A first outcome that we looked at concerns and increased income earned from crafts by 17 weavers. Their incomes in absolute values (but not corrected for inflation) representing € 15, € 23 and € 24 per month per weaver in respectively 2012, 2013 and 2014. In the same period the share of crafts work increased from 8 percent of total household incomes in 2012 to 12 percent in 2014. The most plausible explanation of this increased income consists of increased sales to in the first place other

buyers than Borneo Chic, a business unit created by the Craft Kalimantan network supported by NTFP-EP in collaboration with Cordaid and Both Ends until 2011 and with MFS II funding. In the second place Borneo Chic, NTFP-EP and the association of the weavers explain the outcome. In the third place the Participatory Guarantee System that was launched in 2014 with support from IUCN-NL provided some additional value. Each of these actors and factors are a sufficient explanation for the increased outcome, but other factors such as women selling their product to other buyers, also explain the outcome.

The second outcome the evaluation traced was the ability of forest dependent communities to claim their rights to managing forest resources and land in four target villages. Multiple pathways can explain the outcome. NTFP-EP's efforts to develop participatory eco-cultural maps form the building blocks for greater recognition of community rights to manage forests, but this alone is not sufficient to bring about government acknowledgement and commitment. Other actors played an important role in terms of organising communities and lobbying the district to obtain the endorsement of the village maps. NTFP-EP recognizes that achievements were a result of joint efforts by itself and other CSOs and NGOs. Although NTFP-EP conducted lobby efforts directed at the local government, the legal recognition of the maps and community rights has not yet been achieved. Advocacy for recognition by government of community maps may take longer than the time afforded by the project period. In this regard, the sustainability of the outcome (communities able to claim their rights) will require additional efforts to ensure district policies and practices do not annul or influence current achievements.

From a CIVICUS perspective the contribution of both outcomes towards enhancing civic engagement, strengthening CBOs like the weaver group is limited.

*Relevance*
Interviews with staff of NTFP-EP, with external resource persons, with the liaison officer of IUCN, as well as contextual information helped to assess the relevance of NTFP-EP's interventions in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which NTFP-EP is operating; the CS policies of IUCN.

With regards to the baseline ToC, the interventions and outcome achieved are relevant because they are in line with the ultimate objective of NTFP-EP to improve rural livelihoods through better forest management, in particular through mainstreaming NTFPs in forest management. However, the interventions did not address preconditions identified in the 2012 ToC, specifically with regards to a conducive political context.

With regards to the context in which NTFP-EP is operating, its interventions and outcome achieved are relevant because the Governments 'concession regime' has infringed the capacity of forest-dependent communities to attain sustainable livelihoods options that do not contribute to the depletion of scarce forest resources.

With regards to the CS policies of IUCN, NTFP-EP's interventions and outcome are only partly relevant because although the existence of community maps may help the communities' bargaining position to deal with land use change with the private sector agencies and government, legal recognition of these community-produced maps has not yet been realised. While communities are taking forest management more seriously, structural change is more challenging, especially considering that communities palm oil permits and mining permits have been granted around forested areas. Nonetheless, there are opportunities for communities to make sure these forested areas are not converted to plantation areas. For example, in one of the target villages, an agreement was reached with a palm oil company on land-use, which is in line with the overarching goal of the Ecosystem Alliance support.

*Explaining factors*
The information related to factors that explain the changes in CS, NTFP-EP's contribution to these changes and the relevance of its interventions were collected at the same time as the data were gathered for the previous questions. Apart from searching for explaining factors related to these evaluation questions, the evaluation team was also informed about other important factors such as the organisational performance of NTFP-EP, relations with IUCN that might have had an effect on its performance or external factors.

The most important factors that explain the changes from the internal organization point of view is the institutional transformation that allows NTFP-EP to make in-country decisions. Interventions preceding NTFP-EP's project supported by MFS-II have formed an important basis for continued support and community participation. NTFP-EP benefited from previous investments by Cordaid and other donors in the same project areas. Other influencing factors with regards to participatory community mapping relate to high local political dynamics, as well as lack of capacity of NTFP-EP and implementing partners to undertake strategic lobby interventions. While the evaluation team recognizes that NTFP-EP has undertaken lobby interventions, there is a need for more strategic interventions at a higher level because current interventions have not yet resulted in legal recognition from district authorities.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the governance issues NTFP-EP is working on. Chapter three provides background information on NTFP-EP, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with IUCN. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in appendix 2 of the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in chapter 4. The answers to each of the evaluation questions are being presented in chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in chapter 6. Conclusions are presented in chapter 7.

# 2 Context

This section briefly describes the context NTFP-EP is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

## 2.1 Political context

Indonesia's political context changed drastically when Suharto's New Order regime came to an end in 1998 which opened the possibilities for civil society to start playing its role in society. This paragraph briefly describes the political contexts of the past decades, and ends with an overview of the most important recent changes.

### 2.1.1 Brief historical perspective

Indonesia's rise to being the world's third largest democratic nation has been lauded by many world leaders. The county is often considered to be a model Muslim democracy. As the fourth most populous nation with an estimated 250 million people[1], Indonesia has sustained its democratic commitment since transitioning from an authoritarian leadership to a democracy in 1998. The decentralized administration now consists of 34 provinces and 508 districts and municipalities.

Prior to 1998, Indonesia was under strict authoritarian regime. Suharto, known for his so-called New Order (1966-1998) regime, ushered in radical transformations that would place social and political forces under direct state supervision. The defining characteristics of the Suharto era were a focus on economic growth and controlled consensus and political stability devoid of dissent. A series of tumultuous economic and political transitions in the nineties severely diminished the credibility of ageing President Suharto, who was forced to resign amidst mass street protests.

His departure in 1998 laid bare three decades of social inequalities, state-perpetuated abuses against human rights, and a lack of civilian liberties. The regime change opened the way for a period of *Reformasi* started under the presidency of B. J. Habibie (1998-1999) and continued by Abdurrahman Wahid (1999–2001), Megawati Soekarnoputri (2001–2004), and Susilo Bambang Yudhoyono (2004–2014). Restrictions on citizen participation, press freedom and association were removed. Democratic reforms and decentralization led to direct elections, portioned authority, a devolution of authority to regional authorities, formation of new political parties and ended the military's parliamentary influence. The distinct historical periods of the New Order Regime and *Reformasi* (1998-present) have shaped the emergence of civil society. Defining characteristics are summarized in the table below.

Table 1
*Characteristics that have defined the emergence of civil society in Indonesia*

| Characteristics | New Order, authoritarian period (1966 – 1998) | Reformasi (1998 – present) |
|---|---|---|
| **Political system** | Centralized, authoritarian characterized by unipolarity. Golkar as the dominant political party.<br><br>In 1999, there were 27 provinces, 306 districts | Decentralized, democratic. Fragmentation of power and atomization of patronage relationships. Emergence of numerous political parties. Direct presidential elections since 1999.<br><br>Decentralization altered the political and administrative landscape: 34 provinces, 410 |

[1] In 2010 the population was estimated to be around 237 million people (BPS 2010 Population Census). The current figure is an estimate from BKKBN and similar figures are cited in the CIA's World Fact Book and the World Bank.

| | | |
|---|---|---|
| | and around 60,000 villages. | districts, 98 municipalities, 6,944 sub-districts and 81,253[2]. |
| **State-citizen interaction** | Benevolent leader, obedient population. Down to the village level, the state permeated society. | Modern political culture marked by diminishing hierarchy between the state and citizens, allowing for citizens to interact more freely. |
| **Citizen representation and voice** | Strict control of speech, expression and association.<br><br>CSOs and their networks largely "hiding behind the screen", operating under state surveillance. A period of growth occurred in 1995-98, as resistance was building. | Burgeoning of CSOs, pressure groups and NGOs following the political euphoria after Suharto's fall.<br><br>Indonesian CSOs began to establish new networks internationally. Up until the early 2000s the focus was on state-centrist issues. Later, issues that CSOs were tackling became more diverse, ranging from pluralism, poverty reduction to fulfilment of economic, social and cultural rights. |
| **Media** | No free press, censorship and state-control. Suharto had firm grasp over how to use print & broadcast medias to promote political ideologies. | More vibrant media environment, flourishing of media businesses albeit in control of 12 main conglomerates that are mostly profit-driven and often have political ties. |
| | Limited public and CS use and access to internet until mid-90s. | Twitter nation, widespread social media use. |
| | | Growing realization of the importance of media/free press as the fourth pillar of democracy. |
| **Artistic forms of expression** | Art and literary censorship conducted by the state. Art forms were a means to reinforce political order. | Greater freedom of the arts and cultural sectors. Organizations able to hold art events more freely. Freedom of expression a catchphrase amongst individuals and artistic groups, but challenged by more conservative members of society. |
| **Religious expression and organization** | Regime repressed religious groups, especially radical forms. | Emergence of religious groups seeking to restore Islamic values and defend Muslim values. |

Source: project documents

With political reforms came greater freedom and space for civic engagement. In the *Reformasi* period, there was a remarkable increase in the number of civil society organizations, many of which were Islamic in character. In 2000, the Central Agency on Statistics (BPS) recorded around 70,000 registered organizations, compared to just 10,000 in 1996[3]. New groups sprung up with donors encouraging activists to establish NGOs they could fund. These organizations were eager to distance themselves from state and often took an anti-government stance. Proliferating CSOs and NGOs have taken advantage of decentralization and greater regional autonomy to engage in public affairs. Civil society and government relations have improved, although both sides remain sceptical of the others' intentions.

### 2.1.2 Recent trends in the political context

Indonesia is considered to be a story of democratic success, but it still struggles to realize the benefits of sustained and equitable economic growth. In the political context, the main challenges lie in governing such geographically vast and decentralized country, applying principles of good governance and the enormous task of reforming the country's bureaucracy.

Although, Indonesia's 'big bang' decentralization initiated at the turn of the century narrowed the gap between local government and citizens, it has also localized political power struggles. While the devolution of authorities relieved tensions between the central government and the regions, it has also

Available from http://intranet.law.unimelb.edu.au/staff/events/files/Microsoft%20PowerPoint%20-%20LSM%20dan%20Islam%20di%20Indonesia%20--Melbourne%202010-FINAL.pdf (accessed 25 October 2014) http://intranet.law.unimelb.edu.au/staff/events/files/Microsoft%20PowerPoint%20-%20LSM%20dan%20Islam%20di%20Indonesia%20--Melbourne%202010-FINAL.pdf

created opportunities for corrupt and rent-seeking practices, at the local level. As indicated by Transparency International's corruption index scores, perceived corruption in Indonesia remains high.

Table 2

*Transparency International's Global Corruption Barometer survey: Indonesia*

| Year | Corruption perceptions Index Score<br>*(0 perceived as highly corrupt and 100 perceived as clean)* | Rank |
|---|---|---|
| 2011 | 30 | 100/182 |
| 2012 | 32 | 118/174 |
| 2013 | 32 | 114/177 |

Source: Transparency International

In 2013, decentralization was taken a step further with the approval of the Village Law, intended to address weak governance arrangements and empower rural communities to participate politically. The new law could also lead to village elites distorting power relations and misusing government funding if not properly monitored.

Indonesia is still transitioning politically and many challenges lie ahead. According to the 2012 Indonesia Governance Index's Executive Report: "Indonesia is witnessing a paradox in its democracy. On one hand, a successful opening-up of civil liberty has led to the avalanche of democratic demands across the nation, however on the other hand, democratic institutions' are inadequately respond to those demands." Nonetheless, the Indonesian Governance Index, which focuses on measuring provincial governance, does show a general improvement in the performance of the government (political office) bureaucracy, civil society and economic society based on principles of participation, transparency, fairness, accountability, efficiency, and effectiveness between 2008 and 2012. Civil society scores improved the most significantly, while scores for bureaucracy rose slightly.[4]

Table 3

*Indonesia Governance Index: Average provincial scores*

| Arena | 2008 | 2012 |
|---|---|---|
| Government | 4.93 | 5.46 |
| Bureaucracy | 5.53 | 5.58 |
| Civil Society | 4.85 | 6.33 |
| Economic Society | 4.77 | 5.71 |

In the past decade, Indonesians have generally enjoyed a freedom to participate in the political process through a direct-election mechanism. However, in September 2014 lawmakers voted in favour of a bill reviving indirect elections of regional heads. The controversial vote provoked public outcry which saw peaceful protests and the public voicing their discontent through social media. In early October, just before the end of his term, president Yudhoyono issued a regulation in lieu of the law, effectively repealing the law until further judicial review.

The recent 2014 elections which marked the end of Yudhoyono's 10-year term, demonstrated that Indonesian voters are increasingly voting for popular figures irrespective of political party alliances. While practices of corruption, vote-buying and poor voter administration remained in the recent election, the public seems to have matured politically, indicated by the enormous interest in televised debates between the leading candidates. The appeal of the newly sworn in President Joko Widodo, popularly known as Jokowi, has come from his hands-on, man-of-the-people approach. As Jokowi begins his five-year term he will need to start addressing a myriad of challenges that include corruption, stagnant economic growth, and human rights concerns, particularly with respect to the rights to freedom of expression, peaceful assembly, and religious intolerance. If left unaddressed, these challenges could seriously undermine Indonesia's stability and democratic reforms.

## 2.2 Civil Society context issues with regards to MDG 7

There are two issues with regards to MDG 7 and forest management that are relevant to the SPO. These issues are tenurial access and the non-timber forest product market. This context is important since it defines community access and management over forest resources and how the government has regulated natural resource management.

In 1999 the Government of Indonesia passed the Forestry Law (Law No. 41/1999). This law classified all land into two designations: 1) state forests (*kawasan hutan*) as land bearing no ownership rights and further categorized by three allowable land uses, namely conservation, protection and production forests, and; 2) non-forest areas (*area pengunaan lain*) as those areas designated for non-forestry use such as agriculture and settlement[5]. Law 41/1999 regulated the administrative authority of the forest sector. It was designed to reaffirm control of the forest sector in the hands of the central government after the issuance of Law 22/1999 on Regional Governance, which for a brief period saw district governments taking a proactive role in administering forests and issuing timber extraction permits[6].

Table 4

*Land-use and forest classifications in Indonesia*

| Classification | Sub-classification | Function | Permitted activities |
|---|---|---|---|
| **Forest estate (Kawasan Hutan)** | | | |
| **Conservation forest (*Hutan Konservasi*)** | Natural reserve (*Hutan suaka*) | Preserve animal and plant biodiversity as well as its ecosystem, also functions as an area for life-supporting systems. | Research, science, education, and limited tourism |
| | Nature Conservation area (*Hutan pelestarian alam*) | Protect life-supporting systems, preserve biodiversity and sustainable utilization of natural resources and their ecosystems. | Research, science, education, cultivation activities, cultural activities, and limited tourism |
| **Protection forest (*Hutan Lindung*)** | | Main function of protecting life-supporting systems for hydrology, preventing floods, controlling erosion, preventing sea water intrusion, and maintaining soil fertility | Forest area utilization activities (cultivating medicinal/decorative plants, fungi, apiculture, swiftlet nests, capturing wildlife, cattle feed) utilization of environmental services (water flow, ecotourism, biodiversity, environmental protection, carbon absorption and storage) extraction of non-timber forest products (rattan, bamboo, honey, resin, fruits, fungi) |
| **Production forest (*Hutan Produksi*)** | Limited production forest (*Hutan Produksi Terbatas*) | Main function of generating forest products via selective/limited logging scheme | Timber extraction through selective logging. Village forest or community forest (*hutan desa, hutan kemasyarakatan*) schemes allowed. |
| | Permanent production forest (*Hutan Produksi Tetap*) | Main function of generating forest products | Clear cutting forests and industrial timber plantations. Village forest or community forest (*hutan desa, hutan kemasyarakatan*) schemes allowed. |
| | Convertible production forest (*Hutan Produksi Konversi*) | Main function of generating forest products but spatially reserved for use of development other than forestry | Clear cutting and industrial timber plantations, can also be released to be non-forest land (APL). Village forest or community forest (*hutan desa, hutan kemasyarakatan*) schemes allowed. |
| Non-forest estate (*Areal Penggunaan Lain*/APL) | | Land outside the forest estate designated for non-forestry use such as agriculture, settlement, etc. | |

Source: World Resources Institute, October 2013, based on Law No.41/1999

In 2007, the Government of Indonesia issued a regulation on Forest Management Planning (PP No.6/2007) which introduced schemes for community forestry, opening up opportunities for these

initiatives to be registered.[7] The schemes granted long-term forest management rights to communities. *Hutan desa* (village forest) is one such a scheme that has the potential to improve the welfare of rural communities. More recently in 2013, the country's constitutional court accepted a petition form the Indigenous People's Alliance (AMAN) to review articles of the 1999 Forestry Law. This resulted in a greater recognition for indigenous people's rights by declaring that customary forests should not be classified as state forest areas[8].

Nonetheless, there continue to be many gaps in Indonesia's regulatory framework that have allowed for the over-exploitation of natural resources. For example, the Forest Law does not contain clear criteria for land status conversion[9]. Inconsistent legislation has led to different interpretations of existing policies.

In the context of decentralisation, the devolution of power to the subnational level has increased deforestation and forest degradation rates[10]. Local authorities have issued forest permits and permits for estate crop production and mining activities with little concern for sustainable natural resource management. "In essence, the devolution of law-making authority to regional officials has, in the absence of unambiguous laws, transparent processes, clearly defined powers and supervision, resulted in a mixed bag of rules and regulations and hence inappropriate and overlapping permits, such as the issuance of estate crop permits for forested areas.[11]"

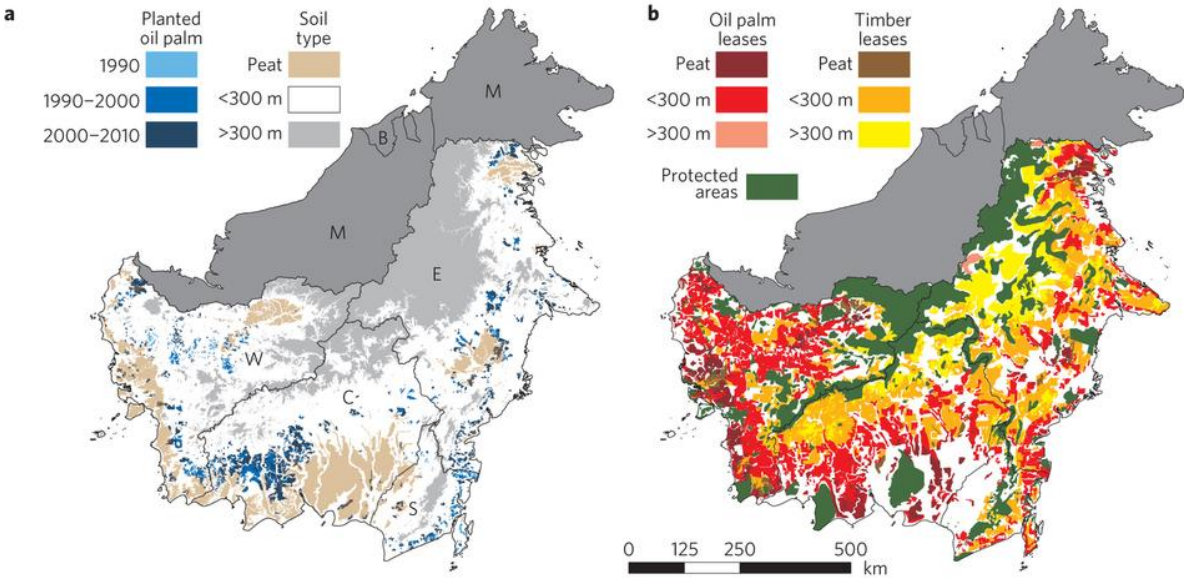

***Figure 1*** *Planted oil palm, oil palm leases, timber leases and protected areas in Kalimantan. Source: Nature Climate Change (2013), http://www.nature.com/nclimate/journal/v3/n3/fig_tab/nclimate1702_F1.html.*

The palm oil and pulp sectors have had a negative impact on Indonesia's forests. Indonesia is now one of the world's top producers of palm oil. The expansion of the sector has resulted in forests being

[10] Ibid

[11] P. 91, Ibid, page 91.

converted to plantations[12]. There are often overlapping allocations of areas designated for forest areas, palm oil production and local communities, which have often led to conflicts between state, community and private sector actors. A study published in 2012 indicated that 90 percent of lands converted to oil palm from 1990 to 2010 in Kalimantan were forested[13]. Local governments in Indonesia are being driven by the new commodity boom of palm oil. In Kalimantan alone, planned oil palm expansion is occurring at an unprecedented rate, encroaching into indigenous territories and protected areas[14]. In West and East Kalimantan the plantation and mining industries have detrimental effects on biodiversity, ecosystems and tenurial and livelihoods security of forest peoples.

In 2011, Indonesia moved to ban the export of a number of the country's raw materials, from minerals to non-timber forest products. A ban on raw rattan exports started on 1 January, 2012. The justification for this policy was to reduce competition so that domestic furniture producers would fare better in export markets[15]. Under these protectionist measures, many rattan farmers and traders have not fared well. Although exports of processed rattan have increased, producers have complained that prices have dropped and much of their produce has gone unsold[16]. The ban has affected actors unequally depending on their position in the value chain and the nature of their production activities, and the policy has generally served to benefit elite interests[17].

The issues relating to the rattan and palm oil sector are small examples of larger problems stemming from legal frameworks that do not provide just and equal conditions. The way tenure systems and forest management have been regulated have failed to protect community and indigenous rights, and have generally favoured market dominant actors. Corrupt practices, limited avenues for access to justice, a lack of protection for smallholders and domestic industries, and land grabs are some of the key issues for civil society. Community groups and NGOs are seeking ways to curb the trajectory of deplorable state of forestry through alternative livelihoods, community empowerment, advocacy and education[18].

# 3 NTFP-EP and its contribution to civil society/policy changes

## 3.1 Background of NTFP-EP

The Non-Timber Forest Products Exchange Programme (NTFP-EP) is as a collaborative, regional network of over 60 NGOs and community-based organisations in South and Southeast Asia seeking to build the capacity of forest-based communities in the sustainable management, especially in the conservation and trade of non-timber forest products. NTFP-EP initially covered six Asian countries and with its headquarters in Manila, Philippines. In mid-2012, the Indonesian arm of the programme set up an independent foundation. NTFP-EP Indonesia registered as *Yayasan Pengembangan Sumberdaya Hutan Indonesia* (referred to as NTFP-EP in this report for simplicity).

The shared goal of NTFP-EP is to promote forest conservation through the empowerment of forest-based communities and the sustainable management of NTFPs[19]. NTFP-EP works to catalyse and support activities that strengthen the capacities of its partner organisations working with forest-dependent communities. NTFP-EP serves as a platform for knowledge and information exchange of appropriate resource management techniques and experiences. Its partner organizations work together with communities in developing and implementing initiatives that meet local needs, while the platform aims to provide technical support.

NTFP-EP aims to strengthen the capacity of forest-based communities and its partner organisations in the fields of:

1. Forest conservation through management and sustainable harvesting of NTFPs;
2. Land tenure security and the recognition and enforcement of user rights through legal measures and policy advocacy;
3. Livelihood security through the enhancement of subsistence uses of NTFPs and promotion of indigenous culture and knowledge;
4. Climate change adaptation and mitigation through social forestry endeavours;
5. Increased income from value addition and marketing of NTFPs – domestic and regional/ international; and,
6. Strengthened negotiating position of forest-dependent communities' vis-à-vis traders, policy makers and other external agents on issues which may affect their environment and livelihood.[20]

The regional NTFP-EP network based in the Philippines also works to facilitate knowledge exchange, providing venues to showcase valuable experiences and to become a clearinghouse for relevant information in the fields of sustainable forest management and NTFP development[21].

Through strategies at the local, national and regional levels, they work to achieve these objectives by:

1. Facilitating the exchange of expertise, experiences and approaches;
2. Providing technical support/backstopping and enabling training;
3. Giving inputs in strategy discussions;
4. Documenting best practices and success stories and providing information on NTFP-related issues;
5. Mobilising resources and essential contacts; and
6. Sourcing advocacy support for local initiatives and helping articulate needs and aspirations.

## 3.2 MFS II interventions related to Civil Society

In the 2011-2014 period, two interventions were supported under the NTFP Exchange Programme. Both focused on sustainable community-based forest livelihoods. The first project, 'Upscaling sustainable, community-based forest livelihoods' (2011-2014 and extended until June 2015) sought to provide and upgrade innovative livelihood models and explore tenurial options for indigenous peoples through landscape models of sustainable forest livelihoods[22]. The focus of the second intervention, 'Sustainable Livelihood Initiatives and Models' (February 2013-July 2015) was on promoting models of sustainable forest livelihoods to the government to draw greater attention and support for their endorsement, as well as to stimulate learning[23].

The specific objectives of the 'Upscaling sustainable, community-based forest livelihoods' Project implemented in East Kalimantan, West Kalimantan and Central Kalimantan were as follows:

1. To upscale and ecologically "upgrade" community-based forest livelihoods (e.g. forest honey and crafts)
2. To introduce and test community-based forest management and tenure schemes and participatory spatial planning towards more inclusive land use planning
3. To promote and better profile an example of a landscape level model of ecological and culture-based livelihoods and conservation schemes
4. To improve the leverage of NTFP producers through better organization and through the exploration of market mechanisms (certification).[24]

A select number of community livelihoods and ecosystems interventions were supported. These included production and expansion of forest honey, community mapping exercises to explore tenurial models, ecological and cultural zonation, organizing rattan farmers through a participatory eco-certification scheme, and upgrading the crafts enterprises.

The second initiative, which aimed to mainstream sustainable livelihood initiatives and models of community-based forestry to the government and consumers in Indonesia had the following objectives:

1. To draw attention to and develop programme and policy support for SLIMs at the national level; and,
2. To raise consumer awareness and support for Sustainable Livelihoods Initiatives and Models (SLIMs).[25]

As such, both projects have a relation to strengthening intermediate organizations and lobby and advocacy. To some extent NTFP's network in and outside of Indonesia also provides an opportunity for intermediate organizations from one country to learn from experiences of those in another country.

# 4 Data collection and analytical approach

## 4.1 Adjustments made in the methodology of the evaluation

The evaluation process started with an input-output-outcome analysis that utilized reports and other documents from the SPO. For NTFP-EP, the analysis was based mainly on project progress reports, which did not report against results or indicators systematically. Only one progress report for the second project was available. As such, the evaluation team was only able to benefit partly from the input-output-outcome analysis for process-tracing. The evaluation team followed the operational guidelines to a great extent, especially on the structure of the workshop with NTFP-EP and the development of model of change[26]. However, the team faced challenges in obtaining evidence and triangulating data with stakeholders, since almost all of them were located in Kalimantan. In addition, the structure of the project was such that there was one main intervention in each of the seven districts and these interventions were not uniform. With the given resources, the evaluation team only managed to conduct a field visit to one of the target districts, namely Sintang.

Since NTFP-EP does not directly implement interventions itself, except in Kutai Barat district[27], but works with/through implementing partner organisations, data at community level and at beneficiary was not available during the visit to NTFP-EP office in Jakarta. Furthermore, this sub-contracting mode has made it difficult to distinguish which activities conducted by the implementing partners are supported by NTFP-EP. In many instances, current partner interventions are a continuation of previous NTFP-EP projects or are also funded by other donors[28]. The evaluation team conducted the field visit to one of the implementing partners (JMM) and met with relevant district officials in Sintang district to collect more information about the government's perceptions on eco-cultural zonation/participatory community mapping and to confirm some claims made by NTFP-EP Jakarta.

## 4.2 Difficulties encountered during data collection

During the data collection process, the team experienced three main challenges. These included the timing of the evaluation, the distance to project locations, and the lack of hard evidence provided by the SPO. At the time of meeting NTFP-EP staff and director, the SPO was in the midst of preparing for an event to be held in Jakarta. As such, the NTFP-EP team in Jakarta could only allocate one day for meeting with the evaluation team. Given the resources for the evaluation, only one field visit to

[26]For example, in the workshop with NTFP EP staff, we started with an input-output analysis to guide the discussion of each indicator. During the discussion, NTFP EP emphasized that the previous project such as Craft Kalimantan is importantly related with the current project from IUCN. They provided a reason why PGS certification is urgently needed by the community for improved capabilities to be dependent on non- timber forest product to improve their livelihood. But the evaluation team also considered certain postponed or failed objectives that were addressed in the input-output analysis. The evaluation team also went to Sintang as one of the region that got support from IUCN in order to improve the ability of forest dependent communities to claim their right over forest resource. NTFP- EP handed the project to the local participatory mapping consultant and used the existing community group to do the participatory mapping.

[27]In Kutai Barat, NTFP-EP has one staff

[28]For instance, when the evaluation team went to Sintang District to assess the outcome achieved (forest dependent people claiming their rights over forest resources), we found that community groups engaged in NTFP-EP's participatory mapping had been established by other projects and actors (People Resource and Conservation Foundation-PRCF), but NTFP EP and PRCF mapping worked in different area, i.e. NTFP EP worked in peat land area and PRCF in hilly area (source: community map provided by informant from Koperasi Jasa Menenun Mandiri). Mapping activities in three villages (Ensaid Panjang, Gembang Raya, dan Karya Jaya Bakti) are managed by Koperasi Jasa Menenun Mandiri. In Village Ensaid Panjang, the community has established a group called community forest management.

Kalimantan was possible and this visit only covered one of the seven locations where NTFP-EP implemented interventions.

Other difficulties emerged in seeking hard evidence to confirm or reject outcome pathways. Data provided by the SPO was limited to documentary evidence that included workshop minutes, activity reports and letters with the local government.

In addition, general difficulties encountered included:

- Workshop participants did not really understand, nor were they familiar with the CS indicators or the CIVICUS framework. They found it difficult to relate NTFP-EP's situation with the indicators, especially since none of them participated in the baseline process. This lessened the effectiveness of the workshop.
- Internal dynamics within the evaluation team and one staff leaving NTFP-EP meant that from both sides those participating in the end line evaluation were not the same as those in the baseline.
- Miscommunication between the evaluation team and NTFP-EP staff regarding the process of soliciting feedback and what documentation was needed. The evaluation team was not aware of internal monitoring systems and documentation processes within NTFP-EP making it difficult to make targeted requests for documents, which were not readily available when the base line was conducted.
- NTFP-EP does not have a dedicated department or personnel for monitoring and evaluation. As such, it added difficulties to find hard data and affected the agreement on the outcomes.
- NTFP-EP has very few field staff in Kalimantan (only one staff in Kutai Barat for PGS sites). Project initiatives are generally implemented through local organizations rather than directly by NTFP-EP. For some interventions, such as the eco zonation mapping, only one dedicated staff/personnel is in charge. This resulted in difficulties to meet with relevant staff and actors who had been involved in the projects.
- Due to interrupted steps of the tracing process, and this partly due to difficulty to match the evaluators' schedule and NTFP EP management, the model of change had to be revisited often to be revised based on new information found by the evaluation team, which consequently meant that the evaluation team had to collect new evidence for the amended model of change.
- Hard data on how the interventions had influenced government policies and practices was lacking. Part of the problem stems from the lack of documentation of program's result changes and the fact that NTFP-EP Indonesia is still in its infancy as an organisation having been established in 2012.

## 4.3 Identification of two outcomes for in-depth process tracing

Based upon an analysis of the projects and programmes financed by the Dutch CFAs, four strategic orientations for civil society were identified. Two of which were selected for each SPO for in-depth process tracing. CDI suggested to the country team to look at the selected strategic orientations which are intermediate organisations and policy influencing.

The first outcome that the evaluation team has looked at is the improved capabilities of minority groups dependent on non-timber forest products to improve their livelihoods. One specific example that the team looked at is increased household incomes through the production of rattan bags, including efforts to set up a certification system. The outcome was selected with the following considerations:

- It was one of several outcomes that all workshop participants agreed to as being a significant change. NTFP-EP staff and the director suggested this outcome during the evaluation workshop because the development of standards for the chain of custody in rattan production was considered a major achievement.
- The outcome is an important element in the Theory of Change (ToC) of the SPO and has relevance to both project interventions, as well as the mission of NTFP-EP.
- Since this outcome is possibly the result of the weavers group that produces the bags, it aligns with the CIVICUS orientation of civic engagement.

The second outcome selected was: forest-dependent communities are able to claim their rights over forest-resources. This outcome relates to the participatory eco-cultural zonation interventions implemented by NTFP-EP, which were also relevant to lobby and advocacy efforts. The reasons for choosing this outcome are:

- The outcome is an important element in the Theory of Change (ToC) of NTFP-EP.
- The outcome was selected following discussions between the in-country evaluation team and CDI and was in line with suggestions for in-depth process tracing.
- As one of the sub-projects from NTFP-EP's proposal to IUCN, the evaluation team expected fewer difficulties to find supporting evidence.
- The outcome is in line with the evaluation's focus for Indonesia. It relates to the efforts of the SPO to ensure government recognition over community land use planning. This recognition process is strategic to NTFP-EP as well as to the communities given the local context which has seen large concessions granted to palm oil plantations.

# 5 Results

## 5.1 Overview of planned and realised outcomes

This paragraph describes outputs and objectives achieved based upon the project documents that CDI and SurveyMETER received from IUCN and NTFP-EP that are relevant to civil society. The level of achievement is based on results up to 2014. It should be noted that both NTFP-EP projects continue until 2015, and as such achievements are not yet final.

Table 6

*Overview of results achieved in relation to project plan NTFP-EP*

| Planned results | | Level of achievement |
|---|---|---|
| Objective 1 | To upscale and ecologically "upgrade" community-based forest livelihoods (e.g. forest honey) in Kapuas Hulu and Paser | Not yet achieved: Some preliminary evidence after workshops of increased value or more efficient production. Weather patterns affected forest honey production and honey farmers focused on rice farming. A honey centre was established as a hub for product develop and trade in Kapuas Hulu in cooperation with the Ministry of Forestry. In response to the impact of climate change on honey production, NTFP-EP worked with local partners and honey producers to address forest fires, drought, incessant rain and production. |
| Objective 2 | To introduce and test community-based forest management and tenure schemes and participatory spatial planning towards more inclusive land use planning in Malinau | Partially achieved: There is already a district regulation on community-based forest management in Malinau in 2012 (Perda No.10/2012 and later in November 2014 Perda No. 201/2014 on district agency for indigenous people issues (BPUNA) as a result of joint advocacy by CSOs during 2012-2014. NTFP EP specific inputs were on Eco-cultural and participatory mapping that were conducted in Sintang and Malinau districts and managed to be presented to the local government. These maps at community level have been completed and a series of lobby activities in Malinau were carried out by NTFP-EP and local partners in 2012 and 2013 for legal recognition by the government. However, it has not been recognised by the government and included in the district land-use/spatial planning RT-RW). |
| Objective 3 | To promote and better profile an example of a landscape level model of ecological and culture-based livelihoods and conservation schemes in Sintang | Partially achieved: While a model has been developed with four eco-cultural maps prepared in Sintang with communities, this has not yet been replicated by the government. Communities reported to be more confident about their claims and possible recognition. Successful collaboration with other NGOs namely: Gemawan, Titian and WWF. This has added leverage to the application within the district, which NTFP-EP hopes will inspire local policies protecting community rights and provide villages with the means to defend against private sector encroachment. Mapping did result in the identification of area where natural dye is produced and efforts to protect this dye. |
| Objective 4 | To improve the leverage of NTFP producers through better organization and through the exploration of market mechanisms (certification) in Kutai Barat & Kapuas | Partially achieved: Participatory Guarantee System (PGS) developed for certification of rattan and piloted in two districts. Organisation of rattan farmers set up. Rotan Lestari Indonesia (Indonesian Sustainable Rattan Initiative) launched in March 2012. Products sold by weavers to Borneo Chic fetch between IDR 60,000-110,000. According to NTFP-EP's income monitoring of 17 weavers there has been a gradual increase in income since 2009 with the establishment of BUR; a women's group. In the last two years, in total, the annual income earned from crafts by 17 weavers increased to around 50 percent per year or € 6.50 per household per month. Compared to the income produced by other livelihoods activities, such as the sale of rubber, this contributes 12 percent of generated income. |
| Objective 5 (SLIMs Project) | To raise consumer awareness and support for Sustainable Livelihoods Initiatives and Models (SLIMs) | Not yet achieved because planned for June 2015: Participation in SLIMs fairs took place to promote sustainable products and promotional video produced to showcase initiatives. More stakeholders (now 20 NGOs) committed time, staff and resources to the SLIMs festival. No evidence yet of increased consumer awareness. Activities to continue until 2015. |
| Objective 6 (SLIMs Project) | To draw attention to and develop program and policy support for SLIMs at the national level | Not yet achieved/insufficient evidence: Policy research not implemented as planned because partner organizations unable to deliver inputs. NGOs involved included: WARSI, Yayasan Mitra Insani (YMI), & YADUPA. WARSI is now conducting policy research. Activities to continue until 2015. |

Sources: Progress Reports 'Upscaling sustainable, community-based forest livelihoods in Kalimantan' & 'Sustainable livelihood initiatives and models' (SLIMs); 2012 & 2013 Annual Reports NTFP-EP for South & Southeast Asia.

With regards to assessing planned versus achieved results for NTFP-EP, it should be noted that the progress reports submitted by the Indonesia office to IUCN were predominantly activity and output

oriented. It was difficult to assess the achievement of higher-level results, especially on how these relate to changes in civil society. In addition, prior support through the Ecosystem Alliance, and other Dutch organizations especially Cordaid, have formed a basis for many of the interventions in the 2012-2014 period.

## 5.2 Changes in civil society in the 2012-2014 period with particular focus on the relevant MDGs & themes in the selected country?

### 5.2.1 Civic Engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

The overall goal of the Ecosystem Alliance, under which the efforts of NTFP-EP fell, was "to improve the livelihoods of the poor and to create a more inclusive economy, through participatory, responsible and transparent management of ecosystems"[29]. Based on the defined goal, civic engagement forms an important component of sustainable forest management since there is specific attention to participation processes. In the case of NTFP-EP, forest-dependent communities are considered to be marginalized groups. Since the baseline, there has been some enhancement in civic engagement to advance the interests of forest communities in Kalimantan, especially in how NTFP-EP take up the needs of marginalized farmers and forest community in their programming process.

The SPO sought to engage more communities through such interventions as participatory mapping of forest resources and eco-certification of rattan and woven materials. The following table presents the growth in the outreach of NTFP-EP in the 2012 – 2013 period: NTFP-EP intervenes in 75 villages, supporting 37 community groups to become income earning groups and that regroup in total 1,440 members, which is a slight increase since 2012. The same table shows that whereas sales per member were estimated at € 53 in 2012, in 2013 they reached € 137 per member.

Table 7
*The reach of NTFP-EP's livelihoods/income-generation support in Indonesia 2012-2013*

| Year | # of community groups/enterprises supported | # of people involved | # of villages covered | NTFPs used | Reported sales (in Euros) |
|---|---|---|---|---|---|
| 2012 | 30 | 1,254 | 68 villages | Bamboo, beeswax, rattan, honey, leaf fibre, natural dyes, water reed | 66,623 |
| 2013 | 37 | 1,440 | 75 villages | Bamboo, rattan, honey, leaf fibre, natural dyes, water reed, honey and honey products, seeds, pandan | 197,386.14 |
| Difference | +7 | +186 | +7 | | +130,763.14 |

Sources: NTFP-EP for South & Southeast Asia Annual Reports 2012, 2013

Generally, the beneficiary engagement strategy over the past two years focused on building/strengthening intermediary organisations. For example, a group of women weavers was helped to sustain their rattan supplies through the introduction of a certification model that involved 20 members from an existing group called Bina Usaha Rotan (BUR) from the Craft Kalimantan network supported by Cordaid (with MFS II funds). The participatory guarantee system (PGS) aimed to "place[s] the action in the hands of the community members and civil society and empower the

[29] "Annex-#3a ID NTFP EP CONTRACT AE IUCN NL", IUCN, pp. (p.2-3)

community[30]. Rotan Lestari Indonesia was established to manage rattan eco certification and market access for certified rattan products. While rattan farmers and producers provided inputs to the PGS standards the focus on supporting intermediary groups has also brought a risk of less direct involvement of weavers and producers. It is hoped that with the success of BUR and PGS, more communities will be encouraged to maintain and not sell their rattan gardens.

Participatory eco-cultural zonation or mapping has addressed the needs of target communities, many of which were highly interested as they faced the encroachment of palm oil companies. The evaluation found evidence of participation of target groups being involved in the mapping exercises. In Sintang, for example, members of Jasa Menunun Mandiri Cooperative, participated in collecting geographic data and creating maps. The maps were shared with villagers to obtain consent/agreement, after which community groups were often organized to define borders and adjust village plans and policies. There were no specific roles for women in the process, and no evidence was found of meaningful participation, rather women were expected to prepare meals for the men during the mapping process. The level of community participation and involvement seems to have varied from one location to the next. In Malinau, target group involvement was limited to meetings with village leaders of neighbouring communities and youth engagement in taking GPS coordinates[31].

With regards to the intensity of political engagement, NTFP-EP partners continue to engage the government through workshops and providing venues for community experiences and testimonies to be used as inputs to policy dialogue at the national and local government levels. LP3M reported positive responses from the local government through the review of Perda No. 10/2012 on acknowledgement from district government on indigenous rights over forest management after holding a local workshop in Malinau in September 2013[32]. But there is still far more to achieve so that decision-making powers are granted to targeted local communities. Only in Sintang were results of participatory mapping used by the forest management group to refuse to consent to palm oil concessions.

The approach that has been taken in marketing and selling crafts is to organize women craft makers, assist them in marketing to various channels whether they be local, provincial or national. NTFP-EP has also linked them to a high-end retail shop in Jakarta. Rattan bags produced by women are sold to BUR for IDR 60,000 – 110,000. BUR then resells the bags to Borneo Chic for IDR 10,000 more per bag. Borneo Chic then refurbishes the bags to become luxury items that can fetch up to IDR 1 million on the high-end market. With certification, women can earn IDR 5,000 more than if the same product is sold on the local market. Until so far 20 members have registered into the PGS rattan scheme in 2014, which will increase marketability of products. NTFP-EP also facilitated the participation of BUR in several national and international craft fairs. One of these fairs in Sante Fe in 2014 contributed to profits for BUR in the same year of IDR 23 million or around IDR € 80 per year per person or € 6.50 per month per person. Although market channels are being expanded, the scale of the profits generated are not yet sufficient to support financial independency of BUR.

### 5.2.2 Level of Organisation

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

[30]"PGS Rattan: Not Just Another Label",. Undated Brochure by NTFP-EP. Available from http://www.ntfp.org/ntfpadmin/publications-pdf/Rattan_PGS.pdf (accessed 13 November 2014, AOI (Indonesian Organic Alliance), and Setara

[31]Source: Interview with Nikolaus Boro Suban, staff LP3M (Lembaga Pemerhati dan Pemberdayaan Dayak Punan Malinau), MFS II Evaluation

[32]Other source reported that this Perda was possible due to support from AMAN and Komnas HAM (National Commission on Human Rights), See http://dishut.jabarprov.go.id/?mod=detilBerita&idMenuKiri=&idBerita=3655, accessed 18on February 18th, 2015.

In terms of intensity of relations with other organisations, defending the interests of forest-dependent farmers/communities and composition of the financial resource base, no changes occurred in the last two years. NTFP-EP's relation with actors in the civil society arena has three distinct typologies, namely relations with: community-based organisations and networks, local NGOs and national CSOs. In 2012, NTFP-EP transitioned from a programme into an independent organisation. Much of the SPO's relations are still defined by its earlier form. Local NGOs, like Yayasan PADI, Yayasan Dian Tama, Yayasan Riak Bumi, Yayasan Petak Danum and Lembaga Pemerhati dan Pemberdayaan Dayak Punan Malinau (LP3M) are implementers; carrying out direct activities at the community level. NTFP-EP, together with Riak Bumi, established a forest honey network (JMHI) in 2005. Since then, JMHI has formed an integral part of NTFP-EP's program, and relations have become closer in 2014. NTFP-EP's director is even a member of the JMHI board. Also of note is that NTFP-EP and its local NGO network (Yayasan Dian Tama, Yayasan Petak Danum, Jasa Menenun Mandiri Cooperative and Yayasan Riak Bumi) established a limited company, PT Lamin Betang, to continue to produce products for Borneo Chic. The strategy, which is largely driven by profit-generation, stimulates the production and selling the community forest products. In terms of frequency, NTFP-EP continued to hold regular formal meetings with their network of local NGO partners in Malinau, Sintang, Berau, and Jakarta four times a year; as well as attending the annual Ecosystem Alliance meeting and an annual weaver's meeting.

For strategic lobby work, NTFP-EP still engages with Sawit Watch, Telapak, Aliansi Organik Indonesia (AOI), Lembaga Ekolabeling Indonesia (LEI), AMAN, WWF Indonesia, WALHI, Warsi, Sawit Watch, HuMa, JKPP, KIARA, CIFOR and others. Through networks such as Forum Komunikasi Kehutanan Masyarakat and the Working Group on Indigenous Community Conserved Areas (ICCAs), NTFP-EP has been part of progressive advancements towards the registration of indigenous lands that have been documented and mapped.

During the end line workshop, NTFP-EP frequently mentioned that a key effort to defend marginalized forest groups was developing livelihood opportunities for forest groups by creating access to market. While the production of rattan and handicrafts has been scaled up, this has not yet led to visible changes at the grassroots level or in the market structure, which is still volatile to price fluctuations.

The Hutan Desa (village forest) scheme and the participatory mapping provides more opportunities for defending marginalized groups. NTFP-EP and its lobby partners have been advocating for the recognition of community land use and indigenous people's rights. Although success has been limited due to a local government that favours palm oil expansion, NTFP-EP's efforts have provided a means for communities to voice their needs and interests to the district government. However, this has sparked a repressive reaction from the district government, who told the community to refrain from provoking palm oil companies. In the cases of Ensaid Panjang and Kelumbik villages, this has led to increasingly tense relations with palm oil companies. Nonetheless, NTFP-EP feels that in the long-term, continued pressure will eventually promote a pro-indigenous administration to be elected in the 2016 district elections.

The composition financial resource base has not changed and the SPO remains dependent on external funding. The institutional transformation (to an Indonesian-based foundation in mid-2012) did not change the funding structure. Plans to develop a consultancy wing that would help NTFP-EP be more self-reliant have materialised in 2014, when NTFP-EP Asia created EXCEED. Board members have found their roles as fund raisers to be a challenge.

**Score baseline 2012 on an absolute scale from 0-3: 2**

**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

The transition into an independent foundation has improved the accountability mechanisms of the organization. NTFP-EP now has mandatory social organs (board of trustees, supervisory board, and executive office). NTFP-EP's organizational structure has grown from four to 11 staff, many of whom

come from the geographic target areas. As during the baseline, decision-making takes place through the long-distance communication between field facilitators in Kalimantan with the Program Director in Jakarta, with regular quarterly meetings held between field and Jakarta-based program staff.

NTFP-EP recognizes the importance of having target groups in their staff structure and board. While currently the board does not have representatives from target groups, there are still opportunities for this in the future. At present, the six board members (half of whom are women) include forestry experts, researchers, activists, and related business institutes. The board's performance is not yet ideal and should have an uneven number of members. One area of improvement since 2012, has been in improving the effectiveness and ownership of the annual board meetings where the executive arm of NTFP-EP reports on progress. Another aspect of downward accountability which the evaluation team is concerned with is the financial management of Borneo Chic. Information about profit-sharing has been shared with weavers during meetings, but clarity on the mechanisms and system for producers to have access to financial information needs to be institutionalized.

On external financial auditing, since its establishment as an independent foundation, NTFP-EP has not been audited externally as an organization but they have been audited for donor-funded projects as was the case with European Union (in 2013) and Swiss funding in July 2014.

**Score baseline 2012 on an absolute scale from 0-3: 2**

**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perception of both civil society actors (internal) as actors outside civil society (outsiders) is taken into account. Specific sub dimensions for this evaluation are the extent to which the SPO has contributed to engage more people in social or political activities, has contributed to strengthening CSOs and their networks, and has influenced public and private sector policies.

According the NTFP-EP's own assessment, communities they serve are generally satisfied with the implemented initiatives, whether directly carried out by NTFP-EP or through their local partners. Since 2008, they have been building better relations and their interventions have never been refused by target communities. Acceptance by communities is considered an indication of constituent satisfaction. NTFP-EP sees itself as a trusted partner to local organizations and others working on similar issues. This was confirmed to some degree by implementing partners, LP3M and Craft Kalimantan, who expressed satisfaction over the project activities and the way which NTFP manages its projects. The degree to which beneficiaries are satisfied with improved livelihoods and incomes has not been measured by the SPO and the changes are not yet significant enough to result in widespread beneficiary satisfaction.

Civil society impacts achieved in the 2012-2014 period by NTFP-EP relate to the work carried out on rattan certification and participatory mapping. Since 2012, NTFP-EP has piloted a Participatory Guarantee System (PGS) for certification with BUR in Kutai Barat. PGS, is an eco-social alternative to third-party certification and is easier for small-scale producers to implement. Certification standards were developed and shared locally and nationally. The Rotan Lestari (ROLEs) unit in West Kutai, a multi-stakeholder platform, was established with members representing AMAN, other NGOs, Department of Industry, Trade and Cooperatives (Disperindagkop), middle-men, rattan farmers and NTFP-EP. In addition, NTFP-EP participates in the Community Forestry Communication Forum (FKKM) to lobby for and promote the optimization of forest resources and community forest products. While there seems to be growing recognition for PGS amongst local government and organisations like CIFOR and WWF, the scope of producer engagement is still limited.

Crafts Kalimantan has contributed to this promotion through the participation in exhibitions and festivals. Currently, however the sale of certified handicrafts through Crafts Kalimantan brings very limited benefits to producers in the community. Not only because of a lack of profit sharing mechanisms, but also because handicraft production is not the main source of income. Information provided by NTFP-EP shows that the contribution of crafts production to the total household income was 12 percent in 2014, an increase of from 8 percent in 2012. As such, women producing rattan bags

do so for supplemental income. There is no evidence that women have been able to improve their livelihoods by selling products through NTFP-EP-supported Borneo Chic.

The above illustrates that the relations with private sector actors remain limited to the supply side, with NTFP-EP working with third parties for the manufacturing of products. In addition to the work on PGS certification, NTFP-EP has assisted JMHI to receive national standard certification through Dian Niaga, a social business enterprise, and was able to link JMHI with a marketing chain.

With respect to the participatory mapping, the resulting maps are being used by communities to contest palm oil expansion and concessions in customary forests. In addition, in Sintang, the maps resulted in a greater recognition of the need to protect forest assets, such as a natural dye-producing plant that is used in the production of woven materials and crafts. Unfortunately the ability to influence public sector policies and practices is still limited and dependent upon the willingness of the government. Through the *Forum Komunikasi Kehutanan Masyarakat* (FKKM), NTFP-EP is active in influencing advocacy agendas on community forestry issues in the form of multi-stakeholders focus group discussions and sharing evidence although this influence is limited to public debates.

In Sintang and Malinau, NTFP-EP has been less successful, whereas in Kutai Barat, where PGS is implemented, government relations have proven more conducive. Nonetheless, none of the community forest maps have received official government recognition. The overall landscape of public sector relations thus remains unchanged. Although there has been more frequent interaction with government actors in the eco-cultural zonation initiative[33], especially with the Departments of Culture and Cooperatives, support from the local government remains stagnant due to high turnover of local government staff.

**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.5 Civil Society Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in chapter 3. In this section we describe how NTFP-EP is coping with that context.

Small-scale producers have been pressured by market demands and protectionist trade policies. Effective since 2012, the export ban on raw rattan products has had implication on the livelihoods of rattan collectors and small-scale producers. As in 1986, when a similar policy was put in place, the ban has resulted in lower demands and prices - even for sustainable rattan; and has had negative impacts on revenues and profits[34]. Producers are paid lower prices for rattan since the raw product is no longer being exported and there is more domestic supply.

Meanwhile there are greater demands for legal and certified rattan products on the international market, requiring the traceability of the product[35]. In Kalimantan, there is significant potential for rattan but producers have generally been unable to compete with the monopoly the market by large furniture producers in Java[36]. Certification schemes give added value to products, but involve high transaction costs to put in place and are often inflexible. NTFP-EP has introduced an alternative to third-party certification through the PGS, which has been tested and applied in a number of countries

[33]NTFP EP reported that several activities done by the project, i.e.: audience with district head on April 17, 2013. Project also had audiences with several head of offices to report the project activities and to get local government support on policy to protect eco-zonation

[36]Meijaard, E.,, Achdiawan, R.,, Wan, M., and Taber, A. 2014. Rattan: The decline of a once-important non-timber forest product in Indonesia. CIFOR Occasional Paper No. 101. Bogor, Indonesia: Center for International Forestry Research

including New Zealand, India and Brazil. In addition, Fair Trade Furniture UK has expressed an interest in testing PGS rattan. PGS is a simple method that can be implemented by farmers themselves. "The system enables organic farmers to obtain certification without having to take on the burden of expensive third party audits[37]." PGS certification costs are said to be 10-50 percent lower than third party or international schemes[38].

According to NTFP-EP, alternatives are needed to the Ministry of Trade's regulation banning exports of raw rattan, which may have positive economic impacts but restricts market access for rattan farmers. "Possibly certified PGS rattan can ensure government and private sector players that sustainably produced rattan is available for sale and can assuage fears that export of rattan will lead to depletion of the resources[39]". Another response of NTFP-EP has been its active involvement in multi-stakeholder forums such as FKKM, Yayasan Setara, and AOI, which support, promote and advocate community forestry and improvements in policies, as well as partnering with CIFOR. More extensive engagement with Yayasan Rotan Indonesia strengthened advocacy and coordination with the Ministry of Forestry on rattan policy issues in 2013.

A constitutional court decision in 2013 recognized that the customary forests (*hutan adat*) no longer fall under state control. NTFP-EP has recognized that this is an opportunity for communities it supports to gain tenurial rights, but is also aware that there are still lengthy procedures involved in implementing this policy change. In addition, district heads and the Ministry of Forestry (merged with the Ministry of Environment in 2014) have not been receptive to the constitutional court decision. Other challenges in enforcing this law pertain to the formalization of land use plans and their inclusion into spatial plans, where customary areas have been historically been absent. Ignoring the tenurial rights of customary forest groups spurs poverty, hinders economic development, and deters environmental stewardship. NTFP-EP efforts to help communities develop maps and land use plans are strategies that can help address these issues. But, NTFP-EP and its partners need to work more politically and strategically on this issue as none of community eco-cultural zonation initiatives have been acknowledged by the government. Local political conditions are highly dynamic and often result in high turn overs. This is a common situation all over Indonesia, and will require a flexible and mult-level lobby approach. More political space may open up in the future under the newly elected administration and through the support of large REDD programmes in Indonesia.

NTFP-EP Indonesia's support is shifting *from* direct community interventions that include providing livelihoods assistance and community resource mapping *to* place more emphasis on upstream, policy advocacy engagement. This means that NTFP-EP is relying more on intermediary organisations to conduct grassroots, community level work and this strategy is chosen as a part of strategy to strengthen local CSOs. NTFP-EP sees itself as a convener of actors at the national level. In area where local capacity is considered weak, NTFP-EP continues to work directly on the ground. This institutional adjustment is suitable considering NTFP-EP's strengths. Given that the SPO relies on a host of implementing partners for downstream work, it should be able to capitalize on the partnerships it has created with local NGOs for use in policy dialogues, influencing tenure issues, and working on markets for NTFPs. This shift will require different capabilities which the SPO does not yet fully command.

## 5.3 To what degree are the changes attributable to the Southern partners?

This section assesses the extent to which some outcomes achieved can be "attributed" to NTFP-EP. Starting with an outcome, the evaluation team developed a model of change that identifies different pathways that possibly explain the outcome achieved. Data collection was done to obtain evidence that confirms or rejects each of these pathways. Based upon this assessment, the evaluation team concludes about the most plausible explanation of the outcome and the most plausible relation between (parts of) pathways and the outcome. The relations between the pathways and the outcomes can differ in nature as is being explained in Table 7.

Table 8

*Nature of the relation between parts in the Model of Change*

| Nature of the relation between parts and other parts or outcome | |
|---|---|
| The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient) |  |
| The part does not explain the outcome at all: other subcomponents explain the outcomes. |  |
| The part explains the outcome but other parts explain the outcome as well: there are multiple pathways (sufficient but not necessary) |  |
| The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient) |  |
| The part is a contributory cause it is part of a 'package' of causal actors and factors that together are sufficient to produce the intended effect. |  |

Sources: Mayne, 2012; Stern et al, 2012

The following paragraph assesses NTFP-EP's contribution to two outcomes. Each paragraph first describes the outcome achieved and the evidence obtained to confirm that the outcome has been achieved. It then presents the pathways identified that possibly explain the outcomes, as well as present information that confirms or refutes these pathways. The last section concludes in the first place about the most plausible explanation of the outcome, followed by a conclusion regarding the role of the SPO in explaining the outcome.

The evaluation team initially selected two outcomes to measure the degree of MFS-II effectiveness. These were:

- Outcome 1: Ensuring sustainable NTFP-based community livelihoods, in particular rattan, in Kutai Barat
- Outcome 2: Forest-dependent communities in Sintang are in a better position to claim their rights over forest-resources as a result of participatory mapping.

### 5.3.1 Ensuring sustainable NTFP-EP based community livelihoods, in particular rattan, in Kutai Barat.

*The outcome achieved*

Table 9 shows that the income earned from crafts by 17 weavers increased with 63 percent in the 2012 – 2014 period, representing € 15 per month per weaver in 2012, € 23 in 2013 and € 24 in 2014. In the same period the share of crafts work increased from 8 percent of total household incomes in 2012 to 12 percent in 2014.

Between 2012 and 2014, total household incomes decreased with nearly 2 percent, mostly explained by decreased income sources from other persons in the family and remittances. At the same time, salaries for other work than plantation work increased with 85 percent as compared to the 63 percent of income increase for crafts. Incomes from agricultural crops increased with 43 percent which is less than the 63 percent of income increase due to crafts.

Table 9

*Household income and contribution from crafts in IDR and Euro, not compensated for inflation*

| Crafts Income | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 |

Source: Information provided by NTFP-EP

Table 9 shows that in absolute figures sales through Borneo Chic, NTFP-EP and BUR increased in the 2011 – 2014 period. However when comparing the sales by weavers to these actors with other buyers and other additional incomes, the percentage of sales through Borneo Chic, NTFP-EP and BUR raised from 15 percent in 2011 to 41 percent in 2012, after which it dropped again in 2013 to increase to 32 percent in 2014 (Table10).

Table 10

*Buyers of rattan bags in percentage of total incomes of 17 weavers in the 2011 – 2014 period*

| Year | 2011 | 2012 | 2013 | 2014 |
|---|---|---|---|---|
| Sales to Borneo Chic, NTFP EP and Warung BUR | 15.03 | 40.66 | 24.72 | 31.99 |
| Sales to Direct Buyers others than Borneo Chic, NTFP-EP and Warung BUR | 83.93 | 53.83 | 70.44 | 57.06 |
| Additional incomes from crafts e.g. handlooms sold, payment for crafts demonstration, etc | 1.05 | 5.51 | 4.84 | 10.95 |
| Total | 100.00 | 100.00 | 100.00 | 100.00 |

Source: Information provided by NTFP-EP

*Pathways that explain the outcome*

1. The first pathway is that the Participatory Guarantee System, developed for certification of rattan, explains increased incomes. IUCN's support enabled NTFP-EP to develop PGS standards and promote community participation. PGS standards were developed with the expertise of AOI and LEI and consulted with a host of local NGOs at the national and local level. A weaver group with 20 female members (BUR) was engaged to pilot PGS.

Information that confirms this pathway

- The Rotan Lestari Indonesia (Indonesian Sustainable Rattan Initiative) was launched in March 2012 and its role is to manage the eco certification of rattan and to ensure the market access for certified rattan products.
- The development of the PGS certification was initiated in 2012, engaging a range of actors including LEI, KpSKH, Setara Foundation, CIFOR, AOI and Yayasan Rotan. Standards and guidelines were developed and piloted in 2013.
- During this process a management unit for the certification process was set up engaging district government offices, local NGO representatives and the Association for Rattan Farmers and Artisans

(P3R). Resulting guidelines produced outline the role of rattan farmers and producers in carrying out assurance and highlight that certification is based on the principles of participation, joint vision, transparency, trust, affordability, simplicity, and democratic principles (non-hierarchical).
- 99 percent of all PGS labelled bags were sold in the United States in July 2014, and this increased the total sales of the weaver group BUR with 30 percent in that year. As a result more weavers are said to become interested to plant rattan and NTFP-EP is now in the position to expand its production, sales and marketing of certified products.
- Data from interviews and reports show that following the introduction of PGS, bags fetched an additional 7-10 percent value added.
- According to NTFP-EP the increase of sales through the aforementioned actors between 2013 and 2014 is to be attributed to the Participatory Guarantee System. This is reflected in table 10 by the increase of the percentage of sales through Borneo Chic, NTFP-EP and BUR from 25 percent in 2013 to 32 percent in 2014.

Information that rejects this pathway
- The certification system was only piloted for the first time in 2014 during which monthly household incomes from craft product reached € 1.20 as compared to the previous year, when monthly household income from crafts reached €7.80 per month (see table 9).
- The value added for women of selling certified rattan bags compared to non-certified bags to Borneo Chic is not yet significant with an added value of between 7-10 percent.

2. The second pathway that explains increased incomes from rattan processing consists of Cordaid's support through the Craft Kalimantan network until 2011. This network laid the building blocks for community groups to participate in the development of PGS standards because it gave birth to the women's weaver group Bina Usaha Rotan (BUR) that piloted PGS and also provided market linkage through a high-end retail store, Borneo Chic.

Information that confirms this pathway:
Borneo Chic is the business unit of the Craft Kalimantan network that was set up under the auspices of PT Lamin Betang Persada together by NTFP-EP and four other organisations. Borneo Chic received a World Craft Council of excellence for its handicrafts. BUR sells its products to Borneo Chic.
The Craft Kalimantan network has been funded by Cordaid and Both ENDS and is being facilitated by NTFP-EP Indonesia. Furthermore, staff partly funded by IUCN - NL is involved in Craft Kalimantan training activities: Panthom Priyandoko, JT, even Natasya also through work on harvest protocols for natural dyes in Sintang. This implies that all activities are being funded with MFS II funding, although not all through the Ecosystem Alliance.

Information that rejects this pathway
The BUR weavers' association income statement for the 2012-2014 period also confirms an increased net income of the association in 2012 and 2013, but a considerable decline in 2014 as can be seen in table 11.

Table 11
*BUR Income Statement 2012-2014 (in IDR)*

| Income statement | 2012 | 2013 | 2014 |
|---|---|---|---|
| GROSS SALES | 39,927,000.00 | 53,075,000.00 | 42,817,000.00 |
| COSTS (labour and raw materials) | 31,796,500.00 | 41,874,000.00 | 36,741,000.00 |
| GROSS PROFIT | 8,130,500.00 | 11,201,000.00 | 6,076,000.00 |
| | | | |
| OPERATING EXPENSES | 3,032,750.00 | 4,788,750.00 | 3,172,000.00 |
| NET PROFIT | 5,097,750.00 | 6,412,250 | 2,904,000.00 |
| ADD OTHER INCOMES (Interests, donations) | 647,000.00 | 0.00 | 0.00 |
| NET INCOME BUR | 5,744,750.00 | 6,412,250.00 | 2,904,000.00 |

Source: Information provided by NTFP-EP

In addition, table 12 shows that in the 2012 – 2014 period, the share of sales of rattan bags through BUR declined in comparison to the total sales at household level. Whereas women sold 70 percent of their bags to BUR in 2012, this percentage dropped to 51 percent in 2014.

Table 12

*Total sales at household level compared to sales through BUR in the 2012 – 2014 period*

| | 2012 | 2013 | 2014 |
|---|---|---|---|
| Total income from crafts at household level in IDR | 45,275,750 | 68,408,750 | 71,898,000 |
| Total sales through BUR in IDR | 31,796,500 | 41,874,000 | 36,741,000 |
| **Percentage** | 70.23 | 61.21 | 51.10 |
| In Euro | 2,177.83 | 2,868.30 | 2,516.68 |
| Per person/month | 10.68 | 14.06 | 12.34 |

Sources: see table 9 for total incomes from crafts at household level; see BUR income statement for an estimation of labour costs paid to women (table 11)

*Conclusion:*

The contribution of the sales of rattan products to general household income has increased in percentage and in absolute values; however these figures have not been corrected for inflation rates. The 17 female weavers sell their products mostly to other buyers than Borneo Chic, NTFP-EP and BUR. The increased share of sales through the three aforementioned buyers from 25 percent in 2013 to 32 percent in 2014 is, according to NTFP-EP, to be partially explained by the Participatory Guarantee System put in place in 2014. Other factors that explain the increased contribution of sales of rattan products to general household income are the Craft Kalimantan network supported by Cordaid and women selling their products to other buyers. All these factors and actors provide a sufficient but not necessary explanation for the increased income.

*Observations with regards to the CIVICUS dimension*

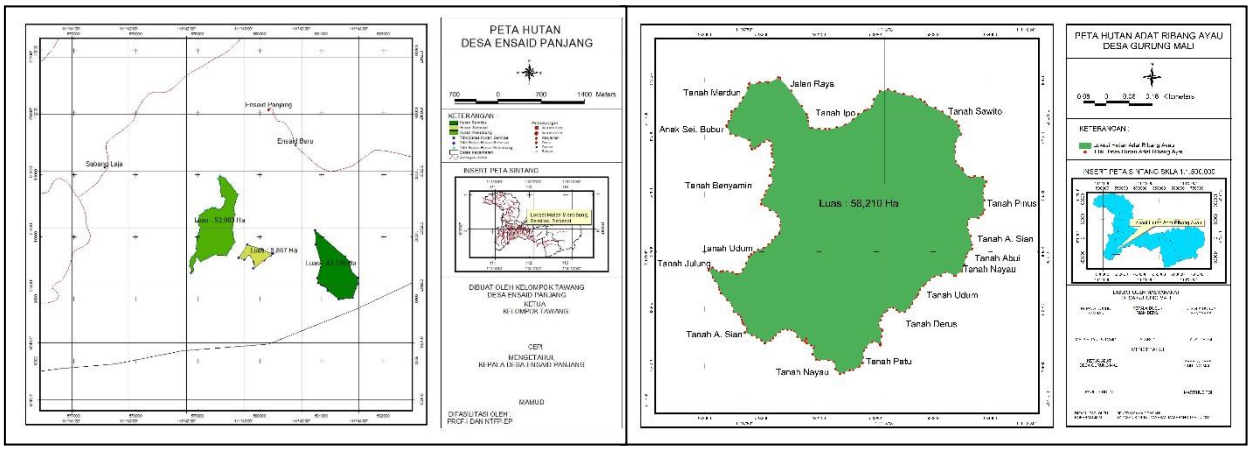
The outcome achieved was amongst others selected to observe the capacity of the BUR association to contribute to the increase of household incomes of the 17 women. However, despite an increased income of the association, weavers prefer to sell their crafts to other buyers than to BUR. In this respect the role of BUR as a civil society organisation with an economic focus is limited.

Also the level of participation of producer groups in developing the guidelines, in this case BUR and P3R, was limited to providing inputs through workshops and meetings without knowing how these would be used but the consultant in charge of developing the guidelines. P3R was given a role in the managerial unit established for PGS. BUR weavers were involved in piloting standards developed. The women weavers were not a part of the first PGS unit as their products were being evaluated by external parties, in this case P3R. The position of women weavers in certification is thus as the 'producer', subject to verification and control. There is a plan to rotate roles within the PGS unit, which will allow P3R's rattan products to be evaluated by BUR.

### 5.3.1 Forest-dependent communities in Sintang are in a better position to claim their rights

*The outcome achieved*

This outcome entails one of the key focuses of the Ecosystem Alliance and was also one of the intended results of the NTFP-EP project implemented in the 2011-2014 period. There is evidence that NTFP-EP supported the undertaking of mapping exercises in four villages in Sintang. This work was subcontracted to a mapping expert who engaged with community groups in the process. By the end of 2014, the four participatory maps produced were presented to the village and district governments for endorsement. So far, the project has only been able to obtain consent from the village and its neighbours. Regulations to acknowledge the maps, neither at district or at village level were issued. The most significant success was in the village of Ensaid Panjang where the community was able to refute the expansion of palm oil using the map produced by NTFP-EP.



The evaluation team was able to visit two of the villages where participatory mapping was undertaken to verify the results and obtain evidence for process-tracing.

*Pathways identified and evidence obtained to confirm or reject pathways*

1. The first pathways consists of NTFP-EP (through technical experts and local partner network) conducting participatory mapping for eco-cultural zonation

Information *confirming* this pathway and its contribution to the outcome:

- Participatory maps produced and signed by village officials[40]

- NTFP-EP supported the drafting of a normative template for village regulations[41] as well as preparing draft regulations for each of the four villages[42]. These drafts regulate the protection and utilization of eco-cultural forest areas, including the size of the protected areas, and how income derived from utilization is managed. In addition a sample matrix describing the roles of community forest groups within the village regulation was formulated[43].
- NTFP-EP's participatory mapping consultant together with JMM undertook lobby efforts to gain support of the District Department of Industry, Trade and Cooperatives (Disperindagkop) office to advocate for a District regulation to recognize the results of participatory mapping in 2013[44]. Unfortunately the head of the Department, who was supportive of the initiative, was replaced in April 2013. As such, a joint initiative was undertaken to organize a meeting with the district and village heads to discuss the village regulations in November 2013[45].

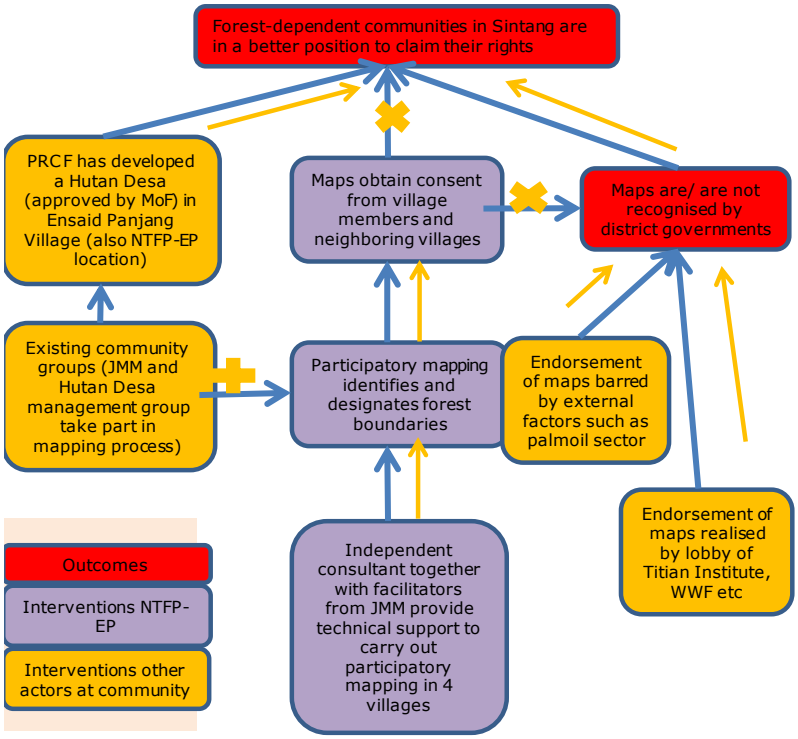


*Figure 2: Pathways that explain the outcome*

- Two official letters (August 2012) were issued jointly by the head of the village of Jaya Karya Bakti, the sub-village head and a palm oil company called PT. Agro Sukses Lestari in which the parties

[40]NTFP-EP maps, see figures below of two of the samples of resulting maps
[41]"Kerangka Struktur Peraturan Desa", NTFP-EP, 2013
[42]"Draf PeraturanPertaturan Desa Empaka Kebiau Raya, Ensaid Panjang, Gemba Raya and Jaya Karya Bakti", NTFP-EP
[43]"Matrik Sistematik Penyusunan Peraturan Desa", NTFP-EP, 2013
[44]Consultant Report and interview with JMM manager
[45]Interview with Head of Village Administration Office, Sintang District

agreed that certain areas of the village would be protected and both timber and NTFPs were not allowed to be exploited in those areas without the agreement of the sub-village head[46].

- In January 2014, the village of Ensaid Panjang obtained the official endorsement from the Ministry of Forestry of a village forest area (Hutan Desa) measuring around 345 hectares. This endorsement is required for the community to apply for the rights to manage the forest area at the district level[47]. Apart from NTFP-EP who sees their role as a convener, other actors were involved as will be further elaborated below.

Information *rejecting* this pathway and its contribution to the outcome:

- According to community members in the two villages (Ensaid Panjang and Gemba Raya), community members were not trained in participatory mapping techniques. The community members reported that they only participated in a one day socialization event, while the facilitators were trained for three days. This one day participation is not considered enough for quality participation[48]. However in Ensaid Panjang most villagers are said to be against expansion of palm oil.
- Participatory mapping engaged members and staff of the Cooperative Jasa Menun Mandiri (JMM), set up by an organisation called Kobus prior to NTFP-EP interventions, and was limited to taking GPS coordinates, women preparing food, and the village mapping team/representatives engaged by the project agreeing to forest boundaries[49].
- People Resource and Conservation Foundation (PRCF) has been supporting the village of Ensaid Panjang since before NTFP-EP's interventions began. In April-July 2011 they conducted participatory mapping (without NTFP-EP support) to map village forest areas (hutan desa), identifying potential resources to support community livelihoods and the ecosystem potential50. The map produced by NTFP-EP clearly states that the results were produced with PRCF support[51].
- NTFP-EP admits that they lack a strategic lobby and advocacy plan for participatory mapping interventions[52].

2. The second pathway consists of interventions external to IUCN also contributing to participatory mapping and communities claiming their rights

Information *confirming* this pathway and its contribution to the outcome:

- Jasa Menun Mandiri (JMM) was set up by an organisation called Kobus prior to NTFP-EP interventions. The consultant hired to undertake participatory mapping engaged JMM members and staff to assist in participatory mapping, especially taking GPS coordinates, facilitating consultations with village elite and women preparing food[53].
- PRCF had already established a CBFM group prior to NTFP-EP interventions.[54]
- Efforts to encourage and advocate for social forestry and hutan desa at the district level have been undertaken by Titian Institute, WWF and PRCF.[55]

- WWF Indonesia has initiated the hutan desa scheme in the villages of Jasa and Rasau together with Titian Foundation since 2009 while Ensaid Panjang received support from PRCF[56].

Information *rejecting* this pathway and its contribution to the outcome: None

3. The third pathway relates to the external local political context that lacks the receptiveness to participatory mapping and communities claiming rights

Information *confirming* this pathway and its contribution to the outcome:

- Village leaders have not been receptive to issuing village decrees formalizing the maps and eco-zonation. The village head of Ensaid Panjang is employed by a palm oil company, making him reluctant to recognize zonation of areas that are off-limits to estate companies[57]. However in the same village the traditional leader plaid a constructive role in the mapping process.
- In Gemba Raya, the village head has not formalized the village maps because he claims not to understand what steps are required as follow up and is dependent on the consultant's assistance[58]. Note: NTFP-EP reported that the mapping team met with head of village on 27 July 2013 and that the village head agreed to invite the head of the Village Consultative Body (*Badan Permusyawaratan Desa*/BPD) to facilitate a village regulation for the map. The evaluation has no evidence of this decree.
- Sintang's District Head has signed concessions for palm oil companies covering the same areas that were mapped with NTFP-EP support[59]. It should be noted however that the community in Ensaid Panjang does not agree to expanding oil palm in their area.
- Circular letter issued by the Head of the District calling of 'provocations' that may damage relations with palm oil companies.[60]
- The local parliament of Sintang (elected for the 2009-2014) period failed to pass a regulation on indigenous, customary forests, which means that non-state forest lands (APL) are still being subject to estate crop expansion, pressuring indigenous peoples.[61]
- The Head of Sintang District has been supportive of palm oil expansion, and considers this as an important source of economic development.[62]

Information *rejecting* this pathway and its contribution to the outcome:

- The Sintang District government has received significant financial support from the Ministry of Forestry (MoF). MoF in 2014 provided funds to the District of Sintang (Special Allocation Funds) amounting to IDR 2.5 billion to support forestry developments. Financial assistance was also provided to support community-based forest conservation development with IDR 50 million being provided to 11 community groups[63].
- MoF issued decrees for village forests (hutan desa) covering a total land area of 5,000 hectares in Sintang[64].

- The Department of Forestry in Sintang has been supportive of efforts by WWF, Titian Institute and PRCF to propose CBFM and hutan desa schemes[65].

*Analysis:*
The evidence shows that NTFP-EP indeed supported participatory mapping in four villages, including non-forest areas. Without NTFP support these maps would not have been produced (they are *a necessary but insufficient explanation* for the outcome). But, the mapping exercises only resulted in positive developments in two of the four villages (Jaya Karya Bakti and Ensaid Panjang) and did not lead to formal recognition by local authorities in the form of district spatial plans (RTRW)—a land use plan that has legal power to manage the land use change. External actors and factors have largely influenced positive results that were achieved. In Ensaid Panjang, NTFP-EP's efforts were preceded by PRCF, who had already undertaken participatory mapping and was in the process of assisting CBFM propose a village forest (Hutan Desa) scheme, which was approved by the MoF in 2014. NTFP-EP assisted the mapping of other areas of the village that were not classified as forest areas. The endorsement of these maps by the MoF was likely to have been achieved even without NTFP-EP support. The mapping areas outside the forest areas supported by NTFP-EP will help the villages defend their rights to managing resources in these non-forest areas.

In Jaya Karya Bakti, the results are likely to have stemmed from support from the village administration to the mapping exercises. But the agreement reached with the palm oil company on zonated areas would not have been achieved without the maps.

In all four villages, NTFP-EP conducted some efforts to organize community members to conduct village mapping, as was done through the JMM cooperative who were enlisted by the consultant hired to undertake participatory mapping. In this regard, there is a risk that the process has not led to a transfer of knowledge and skills. Under the project, a number of audiences with local government were organized to report project activities and mapping results. More intense and long-term relationship building with the local government are more desirable for mapping efforts to be recognized and endorsed. Without skill transfer and intensively working to improve the participation and organization of community members not just in mapping but in village and district lobby efforts to negotiate for the legalization of the maps by the local government, it is unsurprising that the maps were not used in all four locations.

Local political dynamics have also shaped the rather sluggish response from the government. The Ministry of Forestry has provided sufficient support for community-based forestry initiatives in the district but this has only resulted in selective support on the part of the district government. On the other hand, WWF, Titan Institute and PRCF working in the district have received support from the district government.

*Conclusion:*
Forest depending communities being able to claim their rights in the four villages that NTFP-EP is working with can be explained by multiple pathways that consist of interventions by different actors. These processes differed from village to village. This implies that multiple pathways in the villages explain the outcome in a sufficient but not necessary way.

The evaluation team concludes that NTFP-EP's efforts to develop participatory maps form the building blocks for greater recognition of community rights to manage forests, but that this alone is not sufficient to bring about government acknowledgement and commitment. The project benefited from previous initiatives that managed to organize the communities. Local political dynamics have also played an important role in shaping the extent to which community claims are supported. However, although lobby activities were undertaken by NTFP-EP and its partners in the form of government audiences and consultations with government offices they have not yet resulted in a formal acknowledgement by the government to include the community maps in the district regulation (spatial plan).

From a CIVICUS perspective that addresses civil society building, the evaluation team observes that the interventions of NTFP-EP have been built upon existing groups created by other actors. This in

[65] http://yayasantitian.org/408/

itself is efficient and effective, but at the same time implies that NTFP-EP has only partially contributed towards enhancing civil society.

## 5.4 What is the relevance of these changes?

### 5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

The outcomes for which process tracing was conducted were relevant to the 2012 Theory of Change (ToC) but the strategies applied to achieve the outcomes seemed to have estranged somewhat from the underlying preconditions. As identified in the ToC, NTFP-EP's outcomes related to the CIVICUS framework's 'perception of impact' – policy influence, networking and social entrepreneurship, whereas the end line findings concentrate upon improving livelihoods and tenurial rights.

The ultimate objective of NTFP-EP was improved rural livelihoods through improved forest management, in particular through mainstreaming NTFPs in forest management. Preconditions for this change to occur were determined in the baseline as follows:

1. Favourable policies and practices regarding NTFP that would be met if: 1) indigenous communities obtain rights and access to forests as collectors and craftsmen, 2) international pressure increased to protect Indonesia's forests, and if 3) existing market for NTFP products.
2. Successful marketing and sales efforts at international, national, regency and local level. Increased consumer demands that arise from campaign efforts, middle-class interest, use of new technologies and successful marketing. Improved capacities of producers to react to market volatility and consumer behaviour.
3. Expansion of social entrepreneurship through better networks between NTFP producers and consumers, the generation of practical knowledge amongst community producers, and support for NTFP by local governments.

NTFP-EP identified its interventions as building the capacity of forest communities, conducting research and policy influence, and strengthening the organization of producers. Since all three preconditions hinged to a large extent on improved community capability and government support, the evaluation focused on confirming whether community groups have improved their livelihoods and whether there was government recognition for community rights and access.

What the end line has shown is that NTFP-EP's ToC has been rather ambitious. Important achievements have been attained, but the SPO still has some way to go for NTFPs to become viable options that are the preferred choice of the communities and for tenurial security to be achieved through acknowledgement of community rights.

Much of NTFP-EP's efforts seemed to have focused on community development and developing a model that works. Their linkages with other CSOs/NGOs working on forestry issues have certainly been beneficial in keeping NTFP development on the policy agenda at the national level, but NTFP-EP seems to have underestimated the need and importance of working intensively at the district level to influence the government. Empowering indigenous communities so that they can claim their rights (a strategy not identified in the ToC, but part of the logical framework) requires a clear advocacy agenda at the district level because it implies the integration of community maps and plans into local government land use plans. It is true that NTFP-EP conducted many workshops at the local level, some of which worked very well such as in Kutai Barat where support from the local government was garnered for PGS rattan, trade fairs, and trainings. But, due to the highly dynamic political-economic nature of the district, continuous efforts to maintain the momentum for sustainability of changes needs to be incorporated into the advocacy strategy. Workshops, audiences and consultations alone may not be sufficient to incite government responsiveness and support.

Future initiatives that seek to strengthen civil society would benefit from indicators that measure the responsiveness of the public and private sector to taking up socio-economic and environmental concerns of community groups, the impact of organizing communities on policy influence, and the changes in attitudes of intermediary organisations as well as the public and private sector towards NTFPs and tenurial issues.

### 5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

In recent years, the Government of Indonesia (GOI) has implemented reforms to address deforestation through improved forest governance. REDD+ has become one of the key priorities of the government, with institutional arrangements moving forward sine the creation of a Presidential REDD+ Task Force in September 2010. In 2013, 10 working groups were established to help the Task Force roll out a national program. In the same year, an official REDD+ Agency was established.

Another relevant change in the context was the issuance of a forest conversion moratorium in 2011 (extended in 2013), effectively postponing new permits to be issued and providing an opportune moment for development actors to address forest governance issues[66]. At the same time, the implementation of community-based forest management had become more feasible with the issuance of implementation decrees in 2007 and 2008. Licenses that were exempt from suspension under the moratorium included those for the use of NTFPs, but also those issued by mining and crop estate sectors[67] - a juxtaposition of policy. The current policy framework, including Decrees issued by the Ministry of Trade generally favours large-scale industries and restrains smallholders from optimal benefits[68].

Oil palm and pulp are amongst the fastest growing sectors in the plantation sector, with much of the expansion taking place in six provinces, of which three are in Kalimantan[69]. In the past two decades, palm oil has expanded with large tracts of land being converted to palm oil. Planned expansion in Kalimantan is occurring at an unprecedented rate; in West Kalimantan there were plans to convert over 2 million hectares into plantations[70]. The industry offers little benefit to local communities and has ignited any conflicts over land. According to the Ministry of Agriculture, of 1,000 conflicts in 2012, 59 percent were linked to palm oil companies, with 439 conflict in West, East, Central and South Kalimantan alone[71]. NTFP-EP's approach, which has sought to address these issues by improving tenurial security of forest peoples and by promoting local economic models of sustainable livelihoods based on NTFPs, is highly relevant to this context.

One of the reasons why the SPO has focused on NTFPs such as rattan, dyes, and honey is their potential for sustainable forest management and a reduction to deforestation. A 2014 paper released by CIFOR stated that "in theory" it is possible that revenues from rattan could be a disincentive for deforestation, but that rapid economic development, high demands from plantation and mining companies willing to buy up land, and a lack of tenurial security are providing rattan farmers with alternatives[72]. In the context of civil society, particularly the rights of minority forest communities, NTFP-EP's interventions are relevant as they seek to develop sustainable livelihoods models for groups that are facing market- and forest-exploitation. However, NTFP-EP failed to obtain endorsement for their mapping initiatives, and were thus unable to provide a basis for the recognition of these rights by

the public or private sectors. Supporting NTFPs without successfully influencing market drivers and policies that are in favour of estate crops and extractive industries will remain an uphill battle.

### 5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

Ecosystem Alliance's programme goal is *"to improve the livelihoods of the poor and create an inclusive economy, through participatory and responsible management of ecosystems".* It contains three programmatic themes: Livelihoods & Ecosystems, Greening the Economy and People and Climate Change. Three intervention strategies that link these themes are direct poverty alleviation, building civil society, and influencing policy. Major components in the programme are capacity building and learning. NTFP-EP contributes to the Livelhoods and Ecosystems programme.

Ecosystem Alliance introduced the programmatic approach as a means to contribute to civil society development and policy influence. This implies that all EA partners in Indonesia work together to reach joint results. At the EA programmatic level four objectives were set, of which two were merged later.

NTFP-EP is the coordinator to obtain achievements with regards to Sustainable Livelihood Initiatives and Models (SLIMs). This programme will culminate in the organisation of a SLIMs festival as a closure of the EA MFS-II programme in 2015. According to IUCN and NTFP-EP, the SLIMs festival initative has already successfully mobilized funding commitments of more than US $ 16,000. Films will be shown, music will be listened to that related to nature and ecosystems and products will be marketed. The objective is to attract the Indonesian middle class as a consumer and to show the government what is possible by sustainably sourcing and eco-cultural systems' conservation and restoration. The evaluation team found some evidence of EA partners collaborating through exchange visits (between the Dayak Punan in Malinau and the Warsi-supported hutan desa project) and national lobby interventios, both EA and non-EA funded. Since the project is underway, it not yet possible to make conclusions on the achievements of SLIMs and to what extent an interest of middle class consumers will be able to influence government attitudes and practices.

The original idea of the EA programme in Indonesia was to halt the expansion of palm oil concessions and mineral concessions. In this light, the evaluation team did not find evidence that NTFP-EPs participatory mapping exercises with communities has led to the recognition of these maps by the district of Sintang, and that NTFP-EP has not yet developed an approach to lobby the district to endorse participatory village maps. There is evidence of an agreement being reached with a palm oil company in one village on land-use, but other than that the achievements have not contributed to the overarching goal of the Ecosystem Alliance support.

## 5.5 Explaining factors

### 5.1.1 Internal factors

At the start of the implementation of the project, IUCN conducted an organisational scan of NTFP-EP using the five capacities framework and applying two additional EA capacities. Five capacities (capability to act, generate, relate, adapt and achieve) were assessed. Overall, most core capacities and sub-capacities received scores between 2.5 and 3 (4 being the maximum). The following table presents an overview of the scores for each core capacity.

Table 12

*IUCN assessment of NTFP-EP against the 5C framework.*

| Capacity | Description | Score (between 0 and 4) |
|---|---|---|
| 5 Cs | | |
| 1 | The capability to act | Mean score of 2.7 |
| 2 | The capability to generate | Mean score of 2.7 |
| 3 | The capability to relate | Mean score of 2.9 |
| 4 | The capability to adapt and self-renew | Mean score of 3 |
| 5 | The capability to achieve coherence | Mean score of 2.75 |
| IUCN 2 Cs | | |
| 6 | The capability to integrate environmental issues in sustainable development discussions / practice | Mean score of 2.67 |
| 7 | The capability to work in fragile states and on sensitive issues | No scores for NTFP-EP Indonesia |

Source: IUCN Organisational Scan 2011 (filled in by NTFP Philippines and commented by NTFP-EP Indonesia)

NTFP-EP Indonesia scored highest in its capability to relate (defined as how the organisation starts and maintain relationships with other organisations), and the lowest in IUCN's capability to integrate. Since the baseline, the capacity to relate remains one of the core strengths of NTFP-EP. These strengths are particularly evident in the SPO's ability to collaborate with a host of local organizations (although the evaluation team does have some feedback relating to this in Chapter 6) and its alliances with other CSOs/NGOs that share similar goals and principles, as well as engaging in national and regional forums on issues related to NTFP management.

Internal factors contributing to the achievement of the outcome relate to NTFP-EP's institutional transformation. Since the establishment of NTFP-EP Indonesia, in-country decision-making has become more effective and efficient. The size of the SPO's staffing has increased from four to 11 staff in 2014. NTFP-EP claims that half of the staff are technical staff who can give direct assistance to the partner organizations. However, the in-country evaluation team notes that as a whole NTFP-EP still operates very much like a small-grants programme, providing funds to (or 'sub-contracting') local partners to implement the programme in Kalimantan. NTFP-EP's office is located in Jakarta, with minimum field presence in Kutai Barat only. This means that the onsite oversight is challenging. In addition there is a lack of technical support to lobby and advocacy with political actors at the district level. This could explain why community forest zonations are not yet acknowledged by the government.

NTFP-EP's personnel have good personal networks. Some of the individuals working for NTFP-EP are also engaged with partner organizations, as in the case with JMHI. The NTFP-EP programme also contributed to the establishment of Setara Foundation in the early 2000s. These personal linkages are likely to have contributed to conducive working relations with local partners. Additionally, NTFP-EP has provided secretariat support to the Indigenous and Community Conserved Areas (ICCAs) Working Group in Indonesia. Many of NTFP-EP's implementing partners in turn have had long-standing relations with the communities supported through NTFP-EP, facilitating the implementation of downstream work.

### 5.1.2 External factors

External factors that have affected the achievement of the outcomes include market structure and demand as well as political commitment of local district governments. Demands for eco-certified products are mainly driven by global and export markets. The majority of Indonesian consumers still cannot afford the premium that certification implies, or lack an interest in labelled products. At the same time the market for organic products is growing. Only educated consumers in a small number of big cities in Indonesia have shown interest in eco-labelling. Yet even in such cities, knowledge of certification in the consuming public is limited.

The restrictions placed on the export of raw rattan have in some cases led to rattan farmers no longer being interested in joining groups or organisations because of the drop in the price of rattan. A CIFOR study published in 2014 noted that producers and farmers lack interest in maintaining their rattan gardens because they can obtain higher revenues from the sale of other forest products and by selling

their land to coal mining and palm oil companies. In some areas the production of rattan handicrafts have ceased all together because there is no motivation for such work.[73]

PGS certification was completed in 2014 but the impact on farmers' livelihoods with the promised "premium price" has not yet materialized at a sufficient scale to lead to critical mass for livelihood improvement. International literature shows that in many cases such promise has many challenges. For example, in Mexico, certification did not ease slumps in chicle sales and did not provide better market access, while in South Africa there was no improved demand for more expensive, high-quality, certified medicinal plants[74].

In its progress reports, NTFP-EP reported that political dynamics at the district level negatively affected the implementation of several interventions. In 2012, a newly elected district head of Malinau was in favour of palm oil expansion, which made it difficult for the community and the implementing partner to lobby for recognition of community forest management rights. Furthermore, dynamics between the local district head and the legislative branch in 2013 created unconducive conditions to hold workshops on the issue of sustainable livelihood landscape models. In Sintang District, NTFP-EP lost one of its champions when the Head of the Industry, Trade and Culture Office was moved to another office, affecting the efforts implemented.

### 5.1.3 Relations CFA-SPO

NTFP-EP benefited from previous investments by Cordaid and other donors in the same project areas on similar issues. Cordaid projects have focused on establishing markets for indigenous crafts and promoting high-end craft items.

IUCN has supported regional NTFP-EP initiatives through its sub-grant programme since 2004, which have consistently included Kalimantan as a project location. As a part of a collaborative network of over 60 organisations, NTFP-EP Indonesia can draw from the knowledge and experience of forest-based initiatives from five other countries. NTFP-EP and partners also benefited from linkages with other IUCN partners. As mentioned in Chapter 3, the IUCN and NTFP networks in and outside of Indonesia have provided an opportunity for partner organisations and community groups to learn from each other. Indonesia has both hosted and taken part in these exchanges. For instance, in 2012 a study tour was organized between the Forest Department of Sarawak and West Kalimantan to learn from NTFP development for possible replication in Malaysia[75]. In 2013, the regional NTFP-EP organized seed sharing and exchange between India and Indonesia. In the same year, Dayak weavers from Indonesia took part in a study tour to the Philippines where they learned from local craft production experiences. Further exchanges were planned for 2014, include exposure visits, participation in regional and international events, trainings, as well as codification of best practices. For example, in September 2014 NTFP-EP facilitate an exchange between Indonesia and the Philippines on Indigenous and Community Conserved Areas (ICCAs) and tenure issues, which successfully triggered further sharing and exchange between the two countries.

[75]"2012 NTFP-EP for South and Southeast Asia Annual Report", NTFP-EP, 2012

# 6 Discussion

## 6.1 Design of the intervention

Overall, NTFP-EP's intervention logic and project design fell short of clearly identifying how interventions as the community level would lead to strategic results for civil society. There was a gap between the activities and their associated results. For example, to achieve the result (2.1) "target communities are organized and empowered to manage and benefit from ecosystems and claim their rights on natural resources", three activities were identified. These were participatory community mapping, learning visits, and cross visits. While activities may have been successfully implemented, these did not necessarily lead to community empowerment and the ability to claim rights.

Another area in the design that could be improved was lobby and advocacy. The concept note stated that NTFP-EP would be working with the local government, who had been working with grassroots partners for some time. There seemed to be an assumption that partners to whom activities were subcontracted would be able to influence the district governments. During implementation, implementing partners did engage with other NGOs, district heads and the Departments of Forestry and Trade, but this seemed to be mainly through workshops and presentations. A clear and focused lobby strategy, integrated into the design, should have included influencing government policies. Future interventions would benefit from a plan of action that could include: 1) an analysis of the enabling environment and the policies at local level that are supportive of community natural resource management; 2) jointly developing NTFP management plans with local government; 3) working with the government to establish working groups with relevant departments on NTFP management; 4) assisting local governments to produce regulations that support sustainable community management of NTFPs, and; 5) improved value chain analysis to help the government and community organisations identify strategic interventions needed to make NTFP-based livelihoods more sustainable.

NTFP-EP identified its role as being a catalyst, facilitator and networker. NTFP-EP has indeed been able to create a good network of local organizations, as well as working with well-known NGOs at the national level. However, the evaluation team questions whether the model of subcontracting is a valid approach for civil society building. As mentioned in other sections, NTFP-EP itself did not have a strong field presence and had minimal field presence. Activities were dispersed over seven districts in Kalimantan. This has inherent challenges not only for oversight, but also for assisting subcontractors (in this case local NGOs) to strengthen their own organisation. As a convener of local organisations and networks, NTFP-EP can benefit from a three-pronged approach, namely: 1) to further improve the capacities and skills of local stakeholders/institutions (which include local partners) in NTFP management for civil society and conservation benefits; and 2) empowering local, NTFP-dependent communities, and 3) influencing district officials and strategic plans. NTFP-EP could focus more on ensuring that its network and local CSOs and cooperatives it supports improve their position in the civil society arena through collaborative efforts that are geared towards sustained community benefits of NTFP management and influencing public and private sector policies and practices. In order to implement such interventions effectively and with the given resources, a smaller geographic scope is recommended (one province, and two or three selected districts within that province).

Another observation is that NTFP-EP is working on sensitive issues, namely community tenurial rights and the encroachment of large estate companies. Some of the NTFPs, such as rattan, may be on land demarcated for non-forest use. This means that it competes directly with estate crops such as rubber, oil palm and pulp. In turn, protecting community claims to natural resource management ideally should include engaging Ministries and Departments that oversee these areas, such as the Ministry of Agriculture. Effective protection of community tenurial rights means determining first what kind of local land-use systems and practices are in place, and then determining how these relate to forest classifications (See Chapter 2) that have been set by the government for a particular area. Where state forest land has been demarcated for production forest, the village forest (hutan desa) scheme, as supported by Warsi in Jambi and West Sumatra, may be an appropriate strategy. Exchanges

between NTFP-EP and Warsi have been facilitated through the project, but more intensive direct technical assistance is probably needed to support customary groups in Kalimantan to successfully replicate Warsi's model. However, addressing community management rights through formal recognition does not automatically lead to better community livelihoods. Without alternative livelihoods, community members may still fall back on unsustainable practices that lead to deforestation.

There is no easy solution to the dilemmas faced by communities living in forest and non-forest areas that are rich in NTFPs. IUCN is already facilitating exchanges between partners that implement different approaches and strategies. This is the right course to take, especially for NTFP-EP who considers itself to be a convener. Documenting what works and what doesn't work is critical if approaches are to be combined with another.

With regards to strengthening community-based NTFP enterprises, the evaluation team notes that Borneo Chic, the marketing arm of Crafts Kalimantan, has been successful in the marketing and sales of community products. While producers are making more profits through certification and participation in craft fairs, these benefits will have to be brought to scale in order to generate wider positive economic impact for villages. Communities that are aware of the economic opportunities of NTFPs will more likely become active citizens and undertake efforts to advance their shared interests at different levels.

# 7 Conclusion

*Changes in the civil society arena of the SPO*
In the 2012 – 2014 period, the most important change that took place in the civil society arena of the SPO are related to civic engagement: NTFP-EP managed to increase membership of groups that engage in the production and sales of NTFP products with 13 percent, whilst at the same time increasing their income from € 53 in 2012 to € 137 in 2013. However, participation of women in a participatory certification system for rattan product, as well as their participation in community eco-cultural mappings is marginal.

Another change that was realised with regards to the 'perception of impact' dimension, in particular in relation to local policy influencing, consists of communities having made their eco-cultural mappings as a means to influence districts in charge of spatial planning. On one occasion this helped to refute a demand by a palm oil company.

Also of note is that with regards to Practice of Values, NTFP-EP has undergone an institutional transformation in mid-2012 becoming an independent foundation. This has arguably led to better accountability.

*Contribution analysis*
A first outcome that we looked at concerns and increased income earned from crafts by 17 weavers. Their incomes in absolute values (but not corrected for inflation) representing € 15, € 23 and € 24 per month per weaver in respectively 2012, 2013 and 2014. In the same period the share of crafts work increased from 8 percent of total household incomes in 2012 to 12 percent in 2014. The most plausible explanation of this increased income consists of increased sales to in the first place other buyers than Borneo Chic, a business unit created by the Craft Kalimantan network supported by NTFP-EP in collaboration with Cordaid and Both Ends until 2011 and with MFS II funding. In the second place Borneo Chic, NTFP-EP and the association of the weavers explain the outcome. In the third place the Participatory Guarantee System that was launched in 2014 with support from IUCN-NL provided some additional value. Each of these actors and factors are a sufficient explanation for the increased outcome, but other factors such as women selling their product to other buyers, also explain the outcome.

The second outcome the evaluation traced was the ability of forest dependent communities to claim their rights to managing forest resources and land in four target villages. Multiple pathways can explain the outcome. NTFP-EP's efforts to develop participatory eco-cultural maps form the building blocks for greater recognition of community rights to manage forests, but this alone is not sufficient to bring about government acknowledgement and commitment. Other actors played an important role in terms of organising communities and lobbying the district to obtain the endorsement of the village maps. NTFP-EP recognizes that achievements were a result of joint efforts by itself and other CSOs and NGOs. Although NTFP-EP conducted lobby efforts directed at the local government, the legal recognition of the maps and community rights has not yet been achieved. Advocacy for recognition by government of community maps may take longer than the time afforded by the project period. In this regard, the sustainability of the outcome (communities able to claim their rights) will require additional efforts to ensure district policies and practices do not annul or influence current achievements.

From a CIVICUS perspective the contribution of both outcomes towards enhancing civic engagement, strengthening CBOs like the weaver group is limited.

*Relevance*
With regards to the baseline ToC, the interventions and outcome achieved are relevant because they are in line with the ultimate objective of NTFP-EP to improve rural livelihoods through better forest management, in particular through mainstreaming NTFPs in forest management. However, the interventions did not address preconditions identified in the 2012 ToC, specifically with regards to a conducive political context.

With regards to the context in which NTFP-EP is operating, its interventions and outcome achieved are relevant because the Governments 'concession regime' has infringed the capacity of forest-dependent communities to attain sustainable livelihoods options that do not contribute to the depletion of scarce forest resources.

With regards to the CS policies of IUCN, NTFP-EP's interventions and outcome are only partly relevant because although the existence of community maps may help the communities' bargaining position to deal with land use change with the private sector agencies and government, legal recognition of these community-produced maps has not yet been realised. While communities are taking forest management more seriously, structural change is more challenging, especially considering that communities palm oil permits and mining permits have been granted around forested areas. Nonetheless, there are opportunities for communities to make sure these forested areas are not converted to plantation areas. For example, in one of the target villages, an agreement was reached with a palm oil company on land-use, which is in line with the overarching goal of the Ecosystem Alliance support.

*Explaining factors*
The most important factors that explain the changes from the internal organization point of view is the institutional transformation that allows NTFP-EP to make in-country decisions. Interventions preceding NTFP-EP's project supported by MFS-II have formed an important basis for continued support and community participation. NTFP-EP benefited from previous investments by Cordaid and other donors in the same project areas. Other influencing factors with regards to participatory community mapping relate to high local political dynamics, as well as lack of capacity of NTFP-EP and implementing partners to undertake strategic lobby interventions. While the evaluation team recognises that NTFP-EP has undertaken lobby interventions, there is a need for more strategic interventions at a higher level because current interventions have not yet resulted in legal recognition from district authorities.

*Design*
NTFP-EP's project design fell short of clearly identifying how interventions as the community level would lead to strategic results for civil society. This is in particular the case with regards to communities claiming their rights on natural resources and lobbying districts governments to endorse natural resources maps for land use with a forest or an agricultural destination. Future interventions would benefit from a plan of action that includes: a context analysis including the identification of favourable district policies; a joint development of NTFP management plans with local government; creating working groups within the local government regarding NTFP management; support them to produce regulations in favour of the participatory management of NTFPs, and; improved value chain analysis meant to make NTFP-based livelihoods more sustainable and which includes market access through Borneo chic.

The project design could further benefit from a concentration of efforts on fewer districts; building the capacities of local stakeholders and partners in NTFP management and; empowering them to claim their rights.

Table 13
*Summary of findings.*

| When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements? | Score |
|---|---|
| The CS interventions were well designed | 5 |
| The CS interventions were implemented as designed | 6 |
| The CS interventions reached their objectives | 5 |
| The observed outcomes are attributable to the CS interventions | 5 |
| The observed CS outcomes are relevant to the beneficiaries of the SPO | 7 |

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

# Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration
- 1 = A slight deterioration
  0 = no change occurred, the situation is the same as in 2012
+1 = slight improvement
+2 = considerable improvement

| Dimension | | Indicators | Question | Change |
|---|---|---|---|---|
| **Civic engagement** | 1 | Needs of marginalised groups | How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies? | +1 |
| | 2 | Involvement of target groups | What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities? | 0 |
| | 3 | Political engagement | How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups? | 0 |
| | | | | |
| **Level of organisation** | 5 | Relations with other organisations | In the past 12 months what has been the most intensive interaction you had with other CSOs? | 0 |
| | 5 | Frequency of dialogue with closest CSO | In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with? | +1 |
| | 6 | Defending the interests of marginalised groups | Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs? | 0 |
| | 7 | Composition current financial resource base | How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking? | 0 |
| | | | | |
| **Practice of Values** | 8 | Downward accountability | To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them? | +1 |
| | 9 | Composition of social organs | What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for? | 0 |
| | 10 | External financial auditing | How regularly is your organisation audited externally? | 0 |
| | | | | |
| **Perception of impact** | 11 | Client satisfaction | What are the most important concerns of your target groups? How do your services take into account those important concerns? | 0 |
| | 12 | Civil society impact. | In the past 12 months, what impact did you have on building a strong civil society? | 0 |
| | 13 | Relation with public sector organisations. | In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives? | 0 |
| | 14 | Relation with private sector organisations | In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective? | +1 |
| | 15 | Influence upon public policies, rules, regulations | How successful have you been in influencing public policies and practices in the past 2 years? | 0 |

| | | | | |
|---|---|---|---|---|
| | 16 | Influence upon private sector agencies' policies, rules, regulations. | How successful have you been in influencing private sector policies and practices in the past 2 years? | N/A |
| | | | | |
| CS context | 17 | Coping strategies | In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society. | 1 |

# Appendix 2 Changes in civil society indicators between 2012 and 2014

## 1. Civic Engagement

### 1.1. Needs of marginalised groups SPO

NTFP-EP Indonesia considers forest-dependent communities like the Dayaks in Kalimantan to be marginalized by government and private sector actors. Concessions are granted to the public and private sector to exploit forest resources, leading to deforestation and threatening the livelihoods of communities. Under decentralization, local authorities are able to grant such concessions to release non-forest and even forest lands in favour of booming estate crops such as palm oil. In terms of approach and process, during the evaluation workshop, NTFP-EP claimed that they have taken the needs of their target groups into account. This claim has been confirmed by a member of a local partner organization in Malinau[76].

During the 2012 baseline, NTFP-EP mainly supported community groups that produced NTFPs such as rattan, honey and natural dyes through livelihood support. During 2012-2014 period, NTFP-EP continued to support such community-based forest livelihoods, working on increasing access, value added through eco-certification and supporting the sales of NTFP products. In Kutai Barat District, for example, a group of women weavers has been helped to sustain their rattan supplies by introducing an eco-certification model through a regional body called 'Unit Rotan Lestari' that involved 20 members from the existing beneficiary group Bina Usaha Rotan from the Craft Kalimantan project supported by Cordaid. Overall, there was an increase in the number of community groups, people and villages covered by these initiatives. It should be noted that upscaling indigenous crafts initiatives was not supported by the Ecosystem Alliance although certification activities were.

Table 14

*The reach of NTFP-EP's livelihoods/income-generation support in Indonesia 2012-2013*

| Year | # of community groups/enterprises supported | # of people involved | # of villages covered | NTFPs used | Reported sales (in Euros) |
|---|---|---|---|---|---|
| 2012 | 30 | 1,254 | 68 villages | Bamboo, beeswax, rattan, honey, leaf fibre, natural dyes, water reed | 66,623 |
| 2013 | 37 | 1,440 | 75 villages | Bamboo, rattan, honey, leaf fibre, natural dyes, water reed, honey and honey products, seeds, pandan | 197,386.14 |
| Difference | +7 | +186 | +7 | | +130,763.14 |

Sources: NTFP-EP for South & Southeast Asia Annual Reports 2012, 2013

In addition, NTFP-EP tried to take the needs of their beneficiaries up through the introduction of participatory land use mapping and advocacy for the recognition of eco-cultural mapping by the government. In Sintang District, known for longstanding land disputes with palm oil companies since 2007, NTFP-EP helped 4 villages conduct participatory mapping in 2013. In their reports, NTFP-EP mentioned that four eco-cultural maps had been prepared for Sintang district using participatory methods resulting in communities being more confident about their claims and possible recognition[77].

[76]Interview with Nikolaus Boro SubanS, staff Lembaga Pemerhati dan Pemberdayaan Dayak Punan Malinau – LP3M, MFS II evaluation 2014

[77]"NTFP-EP Third Technical Progress Report (1/1/2013 – 28/02/2014)", NTFP-EP)

In Malinau District, the community maps were presented to the District government for recognition of indigenous rights as well as "community-managed forestry" or *hutan kemasyarakatan*. However, until the end of 2014, legal recognition in the form of a district spatial plan and a decree from Ministry of Forestry, had not been issued by the authorities. NTFP-EP recognized that legal acknowledgement by the government of community maps may take longer than expected.

Based on the above findings the evaluation team rates that there has been an improvement in taking into account the needs of marginalized target groups.

## 1.2. Involvement of target groups SPO

NTFP-EP's approach to ensuring quality participation of target groups (men and women, and youth) and other stakeholders has shifted. In the last two years, NTFP-EP's engagement strategy focused more on supporting intermediary partner organisations to engage with beneficiaries. This shift has brought a risk of detaching from direct engagement with weavers and other producers. This approach is different with their engagement approach in 2012 when NTFP-EP used a beneficiary assessment in its project cycle management and Participatory Rural Appraisal (PRA) methods in the assessment phase.

In Kutai Barat, where NTFP-EP designed certification standards for forest products, weavers and producers did participate to some extent by providing inputs to work implemented by external consultants hired to develop standards. After developing certification standards for rattan, NTFP-EP established a regional management unit to oversee certification (Unit Rotan Lestari) with representation of a rattan producer group, Perkumpulan Petani dan Pengrajin Rotan (P3R), as product inspectors. This role has a function in monitoring the implementation of standards by women weavers. According to the Rotan Lestari document (April 2014), inspectors will verify whether production meets plans submitted by women weavers. Of note is that there are no women involved as decision-makers in the unit, despite their dominant role in production. Currently the women are not involved in Unit Rotan Lestari because it is their products which are being certified and controlled. However, NTFP-EP foresees a potential future role for the women weaver's group if PGS is expanded to include other producer groups. The women weavers would then play a role in inspecting the products of other community groups.

Participatory eco-cultural zonation or mapping has addressed the needs of target communities, many of which were highly interested as they faced the encroachment of palm oil companies. Work on participatory mapping has relied on the ability of consultants and implementing partners to involve target groups. The participatory eco-zonation mapping in Sintang supported two kinds of involvement. The consultant engaged staff from the NTFP-EP-supported cooperative Jasa Menenun Mandiri in taking GPS coordinates and producing maps. Second, facilitators also involved community groups to clear forest paths, define borders between forest and cultivation areas, and adjusting Village Regulations as community recognition for participatory maps. Women were engaged in traditional roles such as preparing food for the community members conducting forest mapping.

The lack of engagement of women was also found in participatory land use mapping activities in Malinau. An interview with NTFP-EP's partner, LP3M, revealed that the mapping process involved mainly village the village leadership, and to some extent youth were involved in GPS trainings, but women were relatively excluded in the process. The end line evaluation finds that there are similar concerns as during the baseline on equal participation of target groups, especially where gender is concerned.

In the evaluation workshop, NTFP-EP reported that the involvement of target groups in project activities has increased quantitatively as well as an expanded focus on engaging policy makers (See Indicator 4.3). The evaluation team has found evidence of involvement of target groups, however the level of that involvement seems to have varied in each location and was dependent on the performance of intermediary organisations. As such, we do not consider there to be an improvement since the baseline.

### 1.3. Intensity of political engagement SPO

NTFP-EP's strategy and partnership approach[78] shows that SPO is making a conscious effort to link their work on sustainable livelihoods with the political and economic dimensions of forest governance. In the baseline, advocacy efforts were mainly driven by local political needs such as collecting evidence and testimonies from the community to demonstrate to the head of districts (Bupati) that there were alternative options for boosting districts' economies and to convince local legislators that NTFP-EP's programmes were in line with district development plans and/or Bupati visions for indigenous peoples. National level political engagement mainly targeted the Ministry of Forestry and is being implemented in collaboration with other CSOs such as KKI-Warsi, Yadupa Papua, Telapak, Gita Buana Foundation and Mitra Insani Foundation.

At the district level, there is no particular strategy for political engagement other than obtaining buy-in and recognition of local authorities of community maps and certification. The main strategy has been to invite district offices to workshops and meetings and expose them to NTFP-EP's model In Kutai Barat, NTFP-EP worked with the Departments of Trade and Forestry and has managed to engage them in the unit that manages certification standards. These results were attainable because of the relations that had been established through the Craft Kalimantan project since 2008, which the new initiative simply continued (this included monthly meetings with the government).

There is no fundamental change in terms of NTFP-EP's political engagement as there have been no significant changes to local forest governance: the community eco-cultural zonation has not yet been legalized by the government. There was a district regulation issued in Malinau District that acknowledges the indigenous people rights on forest (Perda No. 10/2012), but this regulation was issued in 2012 (baseline period) and according to the website of the Provincial Forest Department, the main actors that were responsible for lobbying for the regulation were AMAN, Komnas HAM, and WWF[79].

What has changed is that there seems to be more resistance amongst political power holders to community-managed forestry. For instance, NTFP-EP, through its network in Sintang, has been working to encourage the head of district to issue a letter instructing village heads and the sub-district to prioritize community access to forest resources given the ongoing conflict and tension with palm oil companies. However, the head of district instead issued a letter to the community warning them against provoking palm oil companies[80]. LP3M, NTFP-EP's implementing partner, also reported that although many meetings had been organised with local authorities to lobby them to adopt the participatory forest zonation resulting in positive government feedback, there has been no concrete follow up in terms of action and regulations by local authorities specific on eco-cultural zonation.

## 2. Level of Organisation

### 2.1 Relations with other organisations SPO

The baseline reported that NTFP-EP manages multi-level CSO networking. In the 2012-2014 period there has been no fundamental change in the SPO's CSO relations. There is a slight change in the strategy of collaboration. Three current strategic levels are identifiable: 1) NTFP-EP's relations with community-based organisations and enterprises to expand and scale up NTFP production and management; 2) NTFP-EP's engagement with local NGOs as implementing partners, and; 3) collaboration with organisations working on similar issues at the grassroots, national and regional level.

[78] Engagement with KKI-Warsi, Yadupa Papua, Telapak, Gita Buana Foundation and Mitra Insani Foundation to strengthen their advocacy and be a part of the ASEAN Social Forestry Network

[79] Dinas Kehutanan Jabar, "Hutan Adat dalam Tumpukan Penguasaan Hutan". Available from http://dishut.jabarprov.go.id/?mod=detilBerita&idMenuKiri=&idBerita=3655 (accessed 15 December 2014)

[80] The head of district letter could not be found during the evaluation, but there is a consultant report/notes of the results of a community meeting with the villages of Ensaid Panjang and Kelumbik on 26-27 July 2013.

Collaboration with grassroots organisations continued, such as community cooperatives and NGOs that are linked to the Craft Kalimantan initiative as shareholders of Borneo Chic, the marketing division of PT Lamin Betang. These Kalimantan-based organisations include Jasa Menenun Mandiri Cooperative, Yayasan Petak Danum, Yayasan Riak Bumi, and Yayasan Dina Tama. Together, since 2011 these organisations have worked to stimulate the production and sales of community forest products through a high-end retail store based in Jakarta[81]. At the same time, NTFP-EP has worked with Jasa Menenun Mandiri Cooperative on community land use planning. This effort is helping to protect natural dyes found in the forest area that are also a main input to producing woven products (tenun ikat).

With regards to the second strategic level identified above, NTFP-EP subcontracted work to NGOs and networks, including *Jaringan Madu Hutan Indonesia* (JMHI), LP3M, *Aliansi Organis Indonesia, and* the Participatory Mapping Network (JKPP). For example, NTFP-EP together with Riak Bumi, began work with *Jaringan Madu Hutan Indonesia* (JMHI) in locations around Sentarum Lake, West Kalimantan[82] and an expansion to Berau Barat District in 2014[83]. This is part of an effort to upscale community-based forest livelihoods. Of note is that NTFP-EP's director is also a member of JMHI's board. Similarly, NTFP-EP organised rattan producers under the Rotan Lestari Indonesia (Indonesian Sustainable Rattan Initiative) launched in March 2012, which also systematizes certification under the Participatory Guarantee System.

With regards to the third level of organisation, NTFP-EP's engagement strategy is generally issue-based. For example, NTFP-EP was able to initiate eco-certification by enlisting the assistance of national networks such as *Aliansi Organik Indonesia* (AOI), *Lembaga Ekolabeling Indonesia* (LEI), and CIFOR, as well as international networks with Keystone India and NTFP-EP Philippines. NTFP-EP is also a part of several networks that work to advance the rights of communities by attaining recognition for indigenous communities and 'hutan desa' or village/community forest. Through networks such as *Forum Komunikasi Kehutanan Masyarakat* (FKKM), and the Working Group on Indigenous Community Conserved Areas (ICCAs), NTFP-EP engages with AMAN, KKI-Warsi, Sawit Watch, HUMA, JKPP, KIARA, Forest People Program, WALHI and WWF Indonesia. In Indonesia, ICCAs are advancing progressively as the role of Customary Territory Registration Body (*Badan Registrasi Wilayah Adat* or BRWA) has become crucial to the formal registration and recognition of indigenous, communal lands that have been documented and mapped[84]. In advocacy works, NTFP-EP also collaborates with other environmental NGOs like Sawit Watch and Telapak for national advocacy.

At the regional level, NTFP-EP continued to work with the ASEAN Social Forestry Network (ASFN), a network in South East Asia which focuses on issues of social forestry and climate change. NTFP-EP was involved actively discussions on these issues, encouraging the mainstreaming of NTFP management into policies of the Indonesian Government, through the Ministry of Forestry. NTFP-EP Indonesia also benefited from exchanges organised by the NTFP-EP regional network.

## 2.2. Frequency of dialogue with closest civil society organisation SPO

There has been a slight improvement was in the frequency of dialogue with NTFP-EP's closest civil society partners. In the baseline, NTFP-EP worked intensively with four NGOs in Sanggau (Yayasan Dian Tama), Lake Sentarum (RiakBumi), Sintang (Koperasi Jasa Menenun Mandiri) and with Kapuas (Petak Danum Foundation) with quarterly visits to these NGOs. In the last two years, NTFP-EP continued to manage quarterly meetings with partners in Malinau, Sintang, Berau Barat and Jakarta and expanded collaboration. Other forms of collaboration that took place in the 2012-2014 period included cross visits involving community members and LP3M (hosted by WARSI) and learning exchange, as well as taking part in annual Ecosystem Alliance meetings. The SPO also helped to organise annual Bina Usaha Rotan meetings as a venue for dialogue. In Jakarta, NTFP-EP helped to

[81]"NTFP-EP. 2011. *Craft Kalimantan Narrative Report*", NTFP-EP, 2011. Supported by Cordaid

[82]Earlier engagement with Yayasan Padi in Paser District was not successful. In response, NTFP-EP began to engage with JMHI.

[83]Jaringan Madu Hutan Indonesia, "Survey potensi madu hutan di Kabupaten Berau", 23 August 2014. Available from http://www.jmhi.info/?p=149 (accessed 10 November 2014)

[84]Non-Timber Forest Products, "Calendar". Available from www.ntfp.org (accessed 10 November 2014); www.ntfp.org, ICCA calendar (Indonesia)

host ICCA working group meetings with eight NGOs (HuMA, AMAN, YKPP, WWF, Sawit Watch, Pusaka, KIARA, and WALHI), which also served as opportunity to exchange ideas and other lessons with ICCA members. Regular collaboration also took place with NGOs base in West Kalimantan, such as Titian, Gemawan, and WWF.

## 2.3. Defending the interests of marginalised groups SPO

NTFP-EP's main strategy to defend the interests of community members remained the same over the 2012-2014 period. This strategy entails: 1) linking forest–based communities to a broader market networks and providing capacity building activities such as training in production and marketing (branding), organizing exhibitions etc.; and 2) implementing Hutan Desa schemes similar to what WARSI has done in Sumatra and advocating for the government recognition of customary land and granting forest management rights to communities.

Unfortunately, in the last two years, interventions have not yet led to high-level results. With regards to the livelihood strategy, certification and exhibitions have increased the visibility and appreciation for products produced by NTFP-EP communities. But certification schemes are not yet fully viable, especially for rattan and honey because further testing is required for the Participatory Guarantee System (PGS) and honey production has not been consistent due to unpredictable weather patterns. Activities and outputs geared towards this objective were also postponed. The idea to upscale and ecologically "upgrade" community-based forest livelihoods (honey) in Kapuas Hulu and Paser, for example, was postponed due to lack of raw materials. Women rattan basket weavers may be getting slightly more (€ 80 per month) for their raw products, which are then further styled and sold through Borneo Chic, but there are no changes yet in the market structure and rattan basket production is not yet a dominant source of income generation.

Similarly, expected results from the eco-cultural mapping on land/forest boundaries in Sintang and Malinau were not fully achieved. Results of participatory mapping were presented to the local authorities, but there was no follow up by the government to recognize these maps. More resources (time, specialized advocacy personnel, intensive lobby efforts at the district, provincial and national levels) are needed for this to be realized.

During the workshop with NTFP-EP, staff acknowledged that there was no change in defending the interest of marginalized groups.

## 2.4. Composition financial resource base SPO

In the 2011-2013 period, NTFP-EP Indonesia's funding has come from external sources with three major donors (IUCN Netherlands, Cordaid, and the European Union). Together these three donors contributed to more than 62 percent of the SPO's resource base. The remaining resources came from other donors, including PT Lamin Betang (subsidiary of Borneo Chic). The dependency on external donor support remains the same in 2014. It should be noted however that NTFP-EP considers the greater independency of NTFP-EP as a separate, registered foundation to be critical in terms of achieving a better financial resource base. However, income-generating activities that were expected to support NTFP-EP Indonesia to become more self-reliant were not realized in the 2012-2014 period and the board members have struggled to raise funds[85] although some additional funds from Cordaid were secured. This dependency on external donors is also reflected amongst NTFP-EP's implementing partner organisations and their end beneficiaries. Honey farmers and rattan groups have not been able to sell more because of certification, although the prices they fetch have increased slightly. NTFP-EP Indonesia is exploring possible support from the Swedish Society for Nature Conservation (SSNC) to continue alternative certification for rattan. Fair Trade Furniture UK has also expressed an interest in testing PGS rattan.

It is also of interest to note that NTFP-EP reported in 2013 that Borneo Chic recorded a 25 percent increase in sales of community-produced crafts. Although initial discussions on a profit-sharing

[85]Interview with Tarigan, NTFP Executive Director, 7 October 2014.

mechanism with women weavers have taken place, Borneo Chic will need to find and maintain a sustainable market for community crafts before nett profits are reinvested into the communities.

# 3. Practice of Values

## 3.1. Downward accountability SPO

Since the baseline, NTFP-EP Indonesia as an independent organization has grown due to the 2012 institutional transformation. There are now 11 staff (from four staff in 2012) and there is a clearer decision-making process and accountability mechanism. NTFP-EP Indonesia has been able to adopt business processes from the previous institutional set-up, which was run out of the Philippines. But there has been a significant overhaul, so to speak, from a project-based initiative under NTFP-EP regional, to an independent institution. NTFP-EP has put in place all mandatory social organs (board of trustees, supervisory board, and executive) and this structure allows for better accountability and internal control mechanisms compared to the baseline situation.

Oversight and supervision are now legally the responsibility of the foundation's board of trustees, following the Indonesian regulation on foundations (Law No/16/2001). However, during the workshop with NTFP-EP, staff implicitly mentioned that the board is not as active as they would have hoped, partly because they are geographically dispersed. Annual meetings are conducted nonetheless. In addition to accountability procedures not following government regulations, there is also regular donor oversight. This, according to NTFP-EP's management signifies an improvement from the baseline situation.

However, the evaluation team notes that the director of NTFP-EP is also on the board of JMHI, and since JMHI is one of the grantees, this could potentially become a conflict of interest.

Also, downward accountability of Borneo Chic to its producers could be improved so that producers are more aware of profit-sharing mechanisms. Initial discussions on the matter have taken place, but ideally information pertaining to financial reports should be available to the public.

## 3.2 Composition of social organs SPO

With NTFP-EP transforming into a foundation in 2012, its organizational structure and diversity of social organs have changed significantly. First, the law regulating foundations in Indonesia requires for a board of trustees, supervisory board, and an executive body to be established. This has been done in accordance with the law. Board members (50 percent of whom are women) are representatives from various professions (a professor of Social Forestry, the director of a website that publishes environmental news and an activist and founder of ASPUK). The supervisory board also has representatives from the private sector (the directors of Martha Tilaar Inc. and Dian Niaga) and honey expert. There are no representatives of target groups like the Dayak in the board, which is made up of people from outside Kalimantan. The executive director is aware of this situation and NTFP-EP plans to add a Dayak native to the board.

## 3.3. External financial auditing SPO

On external financial auditing, since its establishment as an independent foundation, NTFP-EP has not been audited externally as an organization. They have, however, been audited for donor-funded projects as was the case with European Union in 2013 and Swiss funding in July 2014.

# 4. Perception of Impact

## 4.1. Client satisfaction SPO

NTFP-EP has not measured the satisfaction of its beneficiaries and it is beyond the scope of this evaluation to carry out such an assessment. There are monitoring instruments in place to track the

income generated from craft production and sales. But there are no instruments to monitor the satisfaction of target groups, such as whether villages are satisfied with participatory mapping. From NTFP-EP's regular income monitoring of targeted households and the group businesses, there is an increased income from crafts production and sales. However the income improvements are not yet significant if we calculate per capita income, i.e. around € 5 per month per capita in the last 24 months. Women weavers only make minimal additional profits by selling certified bags and baskets to Borneo Chic. Through PGS certification, the purchase price of semi-finished rattan handicraft products increased by 20-30 percent. However, craft production is not their main source of livelihood, thus the money made is probably considered as a bonus.

In the absence of client satisfaction data, the evaluation team can only assess the satisfaction of NTFP-EP's local partner organisations and projects such as LP3M, Craft Kalimantan, and JMHI. LP3M and Craft Kalimantan staff expressed their satisfaction with project activities and technical assistance provided by NTFP-EP. However, this satisfaction seems limited to how NTFP manages the project activities rather than substantive satisfaction with the results achieved. This activity-level satisfaction is echoed by NTFP-EP staff, who measure satisfaction of beneficiaries with community acceptance of their activities and their attendance and participation in meetings and interventions[86]. NTFP-EP is also well aware that positive reception by the community has also been due to the fact that the project has not started from zero; community relations were in place before 2011.

## 4.2. Civil society impact SPO

Since 2012, NTFP-EP has actively and extensively networked with other CSOs, bringing them together to develop certification standards as well as to conduct and lobby for community recognition of forest and NTFP management. Collaborative efforts with other CSOs to improve the position of small-scale producers and indigenous groups vis-à-vis the government's concession regime have not led to significant achievements. It seems that all NTFP-EP's efforts require more time and resources to fully bring them to fruition.

There are some results worth mentioning, although they are not yet scalable. First, it is clear that communities who are threatened by palm oil expansion have responded well to the mapping efforts. For villages it is a way to record and communicate their claims to land and resources, which they can then use to refute and reject plans to expand the production area of estate crops. In some villages, village regulations have been issued as an initial step. In Sintang, the mapping exercise resulted in the discovery of natural dyes in the customary forest, which are threatened by palm oil expansion. The findings were presented to the district as a means to advocate for the protection of the forest area.

Second, the Participatory Guarantee System (PGS) and the Rotan Lestari Certification Standards should provide value added to rattan. The certification process and standards have been tested in two districts and Rotan Lestari Indonesia (Indonesian Sustainable Rattan Initiative) was launched in March 2012. NTFP-EP ensured multiple stakeholders were engaged, including community groups (Bina Usaha Rotan/BUR in Eheng Village), Yayasan Setara, Aliansi Organik Indonesia (AOI), Lembaga Ekolabelling Indonsia (LEI) and the Ministry of Forestry. NTFP-EP supported BUR in Kutai Barat to pilot PGS and brought in local partners like AMAN and P3R to support the farmers.

NTFP-EP continued supporting the Jaringan Madu Hutan Indonesia (JMHI) for similar standardization and certification efforts. In addition, local partners of NTFP-EP, Yayasan Dian Tama, Yayasan Petak Danum, Jasa Menenun Mandiri Cooperative and Yayasan Riak Bumi set up a Limited Company (PT Lamin Betang) to continue Craft Kalimantan and Borneo Chic. This strategy has successfully stimulated the production and sales of community forest products, with a reported 25 percent income increase for Borneo Chic in 2013.

[86] Eco-Certification staff mentioned this during the workshop.

## 4.3. Relation with public sector organisations SPO

NTFP-EP's main focus has been on raising the concern for sustainable NTFP management and forestry issues. Overall, NTFP-EP claims that relations with the national-level government (Ministry of Forestry and Ministry of Trade) have improved. NTFP-EP coordinates what they call the social forestry team, which is made up of NTFP-EP, Warsi and HuMA and is engaged nationally with the aforementioned ministries. This is funded through the ASEAN Swiss Partnership for Climate Change Project, for which NTFP-EP is the regional coordinator.

The relationship with the sub-national government is acknowledged to be "stagnant" due to unfavourable external political dynamics, especially in Sintang District. In Kutai Barat, NTFP-EP and its partners have had more conducive relations with the Department of Industry, Trade and Cooperatives (Disperindagkop) and the Forest Department in the area of PGS certification. This resulted in Disperindagkop becoming a member of the executive team within Rotan Lestari Unit. Another stakeholder involved in developing certification standards was the Department for Plantation, Food Crops, Livestock and Fisheries of West Kutai.

In the last two years, NTFP-EP has been working more intensively in participatory eco cultural zonation. Their eco cultural zonation activities have put them in close interaction with the government, but there is no materialised support received from the government and no acknowledgement by the government on the community map. NTFP-EP and its partners have tried to build relations with stakeholders involved in recognizing community maps. However, both in Sintang and in Malinau, the government was largely unresponsive. NTFP-EP described their relations as being "flat". The district head of Sintang has not been supportive, while support for the Department of Culture and the Department of Cooperatives in both districts has relied on personal commitment. Support from the government is still mainly in the form of complying with workshop invitations. This lack of response from the government has been despite regular dialogue through NGO networks and in a joint working group on forest tenure that works to pressure and encourage the Ministry of Forestry.

## 4.4. Relation with private sector agencies SPO

During the baseline, the relation with private sector was still limited the supply side, i.e. NTFP working with communities to supply NTFP products and improve the production quality. While continuing to work in similar areas, NTPP-EP also expanded to influencing the value chain through PGS certification. Although still in its infancy, PGS Lestari Rotan is providing value added. NTFP-EP established a management unit for certification in 2014, engaging both public, community and NGO actors. This unit delivers certification services that are participatory. There is no sufficient information on the effectiveness of the certification and whether newly established links with the private sector will benefit the communities because the system has not yet been adopted and put to full-scale use. Nonetheless, community groups like BUR were able to participate in more national and international exhibitions (such as the International Folk Art Market in Santa Fe, New Mexico) that are helping to expand their market access. One of the BUR members expressed her satisfaction over the amount of exposure the group has enjoyed since the eco-certification project was initiated.

Another successful intervention was the facilitation of JMHI to comply with the Indonesian National Standards (SNI) from the Ministry of Forestry. This was possible through support from Dian Niaga, a small company, whose director is on NTFP-EP's supervisory board. Marketing links have been created with PT. UKMI and Amway for the sale and distribution of honey. JMHI has also established links with cosmetic company, L'Oreal.

These examples illustrate that where there is significant traction and interest in a particular product, NTFP-EP can help facilitate linkages between community and producer networks with private sector actors, including compliance with market demands – whether this is in the form of eco-certification or meeting required standards.

## 4.5. Influence upon public policies, rules, regulations SPO

NTFP-EP is aware that their work depends on public policies, and as such they have continued to conduct policy advocacy through different approaches, which include influencing the agenda-setting of

public debates and influencing policy formulation by presenting evidence and proposals that are based on empirical data collected. NTFP-EP, through eco cultural zonation conducted with the community, has tried to influence land-use planning (spatial plans). Community maps have been presented to district authorities, who have not yet recognized community claims and proposals. Through FKKM (Forum Komunikasi Kehutanan Masyarakat), NTFP-EP has been active in influencing the agenda setting in community forestry issues in the form of multi-stakeholder focus group discussions and sharing evidence. However, there have been no tangible successes beyond agenda setting.

At the national level, NTFP-EP continued to coordinate with key actors such as CIFOR, WALHI, WWF and other environmental NGOs and those involved in the ICCAs platform. These efforts have been geared towards influencing the Ministries of Forest and Trade to mainstream NTFPs and support community efforts. There have been no distinct policy changes that NTFP-EP has contributed to since the baseline.

### 4.6. Influence upon private sector agencies' policies, rules, regulations SPO

This indicator is not applicable for NTFP-EP.

## 5. Civil Society context

### 5.1. Coping strategies

The establishment of NTFP-EP Indonesia (as an Indonesia-based foundation) can be seen as a strategy to cope with changes in funding opportunities where foreign aid is decreasing. This strategy seems appropriate to mobilise domestic funds from private sector (through CSR) and the government, as well as potentially benefiting from the REDD+ initiatives being undertaken in the country (which include Central Kalimantan as a priority area).

Small-scale producers have been pressured by market demands and protectionist trade policies. Effective since 2012, the export ban on raw rattan products has had implication on the livelihoods of rattan collectors and small-scale producers. As in 1986, when a similar policy was put in place, the ban has resulted in lower demands and prices - even for sustainable rattan; and has had negative impacts on revenues and profits[87]. Producers are paid lower prices for rattan since the raw product is no longer being exported and there is more domestic supply. Indonesia is the world's largest supplier of rattan and policies that ban the export of un- and semi-processed rattan may put the industry at risk as well as jeopardize forests.

Meanwhile there are greater demands for legal and certified rattan products on the international market, requiring the traceability of the product[88]. In Kalimantan, there is significant potential for rattan but producers have generally been unable to compete with the monopoly the market by large furniture producers in Java[89].

Given these conditions, one of the coping strategies of NTFP-EP was the hosting of a collaborative workshop with the Forest Department of Kutai Barat District, Department of Industry and WWF Indonesia on schemes and systems for sustainable rattan in January 2013. The aim of this workshop was to spark an interest in sustainable rattan certification and resulted in the establishment of the

Rotan Lestari Unit in Kutai Barat and the development of a certification plan. Certification schemes give added value to products, but involve high transaction costs to put in place and are often inflexible. NTFP-EP has introduced an alternative to third-party certification through the Participatory Guarantee System (PGS), which has been tested and applied in a number of countries including New Zealand, India and Brazil. PGS is a simple method that can be implemented by farmers themselves. "The system enables organic farmers to obtain certification without having to take on the burden of expensive third party audits[90]." PGS certification costs are said to be 10-50 percent lower than third party or international schemes[91].

According to NTFP-EP, alternatives are needed to the Ministry of Trade's regulation banning exports of raw rattan, which may have positive economic impacts but restricts market access for rattan farmers. "Possibly certified PGS rattan can ensure government and private sector players that sustainably produced rattan is available for sale and can assuage fears that export of rattan will lead to depletion of the resources[92]". Another response of NTFP-EP has been its active involvement in multi-stakeholder forums such as FKKM, Yayasan Setara, and AOI, which support, promote and advocate community forestry and improvements in policies, as well as partnering with CIFOR. More extensive engagement with Yayasan Rotan Indonesia strengthened advocacy and coordination with the Ministry of Forestry on rattan policy issues in 2013.

A constitutional court decision in 2013 recognized that the customary forests (*hutan adat*) no longer fall under state control. NTFP-EP has recognized that this is an opportunity for communities it supports to gain tenurial rights, but is also aware that there are still lengthy procedures involved in implementing this policy change. In addition, district heads and the Ministry of Forestry (merged with the Ministry of Environment in 2014) have not been receptive to the constitutional court decision. Other challenges in enforcing this law pertain to the formalization of land use plans and their inclusion into spatial plans, where customary areas have been historically been absent. Ignoring the tenurial rights of customary forest groups spurs poverty, hinders economic development, and deters environmental stewardship. NTFP-EP efforts to help communities develop maps and land use plans are strategies that can help address these issues. But, NTFP-EP and its partners need to work more politically and strategically on this issue as none of community eco-cultural zonation initiatives have been acknowledged by the government. However, a lessons learned from the project is that government ministries must provide further clarity on how community plans will be incorporated into the formal spatial planning process. More political space may open up in the future under the newly elected administration and through the support of large REDD programmes in Indonesia.

NTFP-EP Indonesia's support is shifting *from* direct community interventions that include providing livelihoods assistance and community resource mapping *to* place more emphasis on upstream, policy advocacy engagement. This means that NTFP-EP is relying more on intermediary organisations to conduct grassroots, community level work and this strategy is chosen as a part of strategy to strengthen local CSOs. NTFP-EP sees itself as a convener of actors at the national level. In area where local capacity is considered weak, NTFP-EP continues to work directly on the ground. This institutional adjustment is suitable considering NTFP-EP's strengths. Given that the SPO relies on a host of implementing partners for downstream work, it should be able to capitalize on the partnerships it has created with local NGOs for use in policy dialogues, influencing tenure issues, and working on markets for NTFPs. This shift will require different capabilities which the SPO does not yet fully command.

Report CDI-15-068
ISSN 0000-0000

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Klaver, D.C., Smidt H., Nugroho, K., Prasetya, K. S., February 2015, Yayasan RUANGRUPA *end line report; MFS II country evaluations, Civil Society component,* Centre for Development Innovation, Wageningen UR (University & Research centre) and SurveyMETER. Report CDI-15-38 Wageningen.

This report describes the findings of the end line assessment of Yayasan RUANGRUPA that is a partner of Hivos.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses RUANGRUPA's contributions towards strengthening Civil Society in Indonesia and it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which RUANGRUPA contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain RUANGRUPA's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

# Acknowledgements

SurveyMETER and CDI are thanking the staff and the leaders of all Southern Partner Organisations that participated in collecting information for the evaluation of the contribution of these partner organisations to creating a vibrant civil society in Indonesia. They also thank the Co-Funding Agencies and the Dutch Consortia they are a member of for making background documents available. We hope that this evaluation can support you in better positioning yourself in the Civil Society Arena of Indonesia.

# 1 Introduction

This report presents the civil society end line findings of RUANGRUPA in Indonesia which is a partner of Hivos in Indonesia under the Dutch Consortium People Unlimited. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study, RUANGRUPA is working on the theme 'governance'.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch CFAs and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organisation, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

## 1.1 Changes in the civil society arena of the SPO

In the 2012 – 2014 period the most important change that took place in the civil society arena of the SPO are related to civic engagement and level of organisation. RUANGRUPA has been successful in promoting inclusive contemporary visual art to allow more upcoming young artists from various backgrounds to explore issues of surrounding context through creative expression. In doing so, RUANGRUPA has defended those who have been marginalised by market interests and played an important role in the improvement of the contemporary arts infrastructure. RUANGRUPA's stature has also been growing as an avant-garde organisation able to organise collective and collaborative efforts that seek to engage a wider audience.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with the SPO, and interviews with external resources persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

## 1.2 Contribution analysis

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution of the other SPOs. RUANGRUPA Ruangrupa was selected for a quick assessment.

The outcome that we looked at is the development of infrastructure for contemporary visual and video art in Jakarta. The most likely explanation to this outcome is that RUANGRUPA has become a benchmark for contemporary visual arts and has contributed significantly to the improvement of arts infrastructure in Jakarta. The contribution of the SPO towards achieving this outcome is in promoting contemporary arts to a common audience, supporting new initiatives for alternative expression and being a knowledge producer in the area of contemporary arts.

## 1.3 Relevance

Interviews with staff of RUANGRUPA, with external resource person, with the liaison officer of Hivos, as well as contextual information helped to assess the relevance of RUANGRUPA's interventions in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which RUANGRUPA is operating; the CS policies of Hivos.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because they comprise of the ToC's preconditions, such as existence of public space, networking, and increasing the capacity of society. With regards to the context in which RUANGRUPA is operating, its interventions and outcomes achieved are relevant because the SPO defended those marginalised by market domination in contemporary visual arts. With regards to the CS policies of Arts Collaboratory, RUANGRUPA's interventions and outcomes are relevant because all RUANGRUPA's objectives fit with Hivos and Arts Collaboratory policies[1].

## 1.4 Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within the RUANGRUPA, the external context in which it operates and the relations between RUANGRUPA and Hivos.

Internal factors within the SPO that explain the findings are the open character of RUANGRUPA and the fact that the organisation is an artist-run initiative with a relaxed and informal atmosphere. By organising numerous events, RUANGRUPA has also been able to ensure a dynamic leadership, with alumni taking an active role in the organisation.

External factors that explain the findings are an increasing demand for contemporary arts content and alternative forms of expression. The popularity of contemporary arts has likely contributed to greater audience participation, but has also shaped how RUANGRUPA navigates between idealism and the commodification of contemporary art.

Factors that explain the findings that are related to the relation between RUANGRUPA and Hivos are continuous Hivos support from 2003 to 2013[2] and increased RUANGRUPA's role as Arts Collaboratory associate partner since 2008.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the MDG/theme RUANGRUPA is working on. Chapter three provides background information on RUANGRUPA, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Hivos. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in Appendix 2 of the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in Chapter 4. The answers to each of the evaluation questions are being presented in Chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in Chapter 6. Conclusions are presented in Chapter 7.

# 2 Context

This paragraph briefly describes the context RUANGRUPA is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

## 2.1 Political context

### 2.1.1 Brief historical perspective

Indonesia's rise to being the world's third largest democratic nation has been lauded by many world leaders. The county is often considered to be a model Muslim democracy. As the fourth most populous nation with an estimated 250 million people[3], Indonesia has sustained its democratic commitment since transitioning from an authoritarian leadership to a democracy in 1998. The decentralized administration now consists of 34 provinces and 508 districts and municipalities.

Prior to 1998, Indonesia was under strict authoritarian regime. Suharto, known for his so-called New Order (1966-1998) regime, ushered in radical transformations that would place social and political forces under direct state supervision. The defining characteristics of the Suharto era were a focus on economic growth and controlled consensus and political stability devoid of dissent. A series of tumultuous economic and political transitions in the nineties severely diminished the credibility of ageing President Suharto, who was forced to resign amidst mass street protests.

His departure in 1998 laid bare three decades of social inequalities, state-perpetuated abuses against human rights, and a lack of civilian liberties. The regime change opened the way for a period of *Reformasi* started under the presidency of B. J. Habibie (1998-1999) and continued by Abdurrahman Wahid (1999–2001), Megawati Soekarnoputri (2001–2004), and Susilo Bambang Yudhoyono (2004–2014). Restrictions on citizen participation, press freedom and association were removed. Democratic reforms and decentralization led to direct elections, portioned authority, devolution of authority to regional authorities, formation of new political parties and ended the military's parliamentary influence. The distinct historical periods of the New Order Regime and *Reformasi* (1998-present) have shaped the emergence of civil society. Defining characteristics are summarized in the table below.

Table 1
*Characteristics that have defined the emergence of civil society in Indonesia*

| Characteristics | New Order, authoritarian period (1966 – 1998) | Reformasi (1998 – present) |
|---|---|---|
| Political system | Centralized, authoritarian characterized by unipolarity. Golkar as the dominant political party. | Decentralized, democratic. Fragmentation of power and atomization of patronage relationships. Emergence of numerous political parties. Direct presidential elections since 1999. |
| | In 1999, there were 27 provinces, 306 districts and around 60,000 villages. | Decentralization altered the political and administrative landscape: 34 provinces, 410 districts, 98 municipalities, 6,944 sub-districts and 81,253 villages.[4] |
| State-citizen interaction | Benevolent leader, obedient population. Down to the village level, the state permeated | Modern political culture marked by diminishing hierarchy between the state and citizens, |

[3] In 2010 the population was estimated to be around 237 million people (BPS 2010 Population Census). The current figure is an estimate from BKKBN and similar figures are cited in the CIA's World Fact Book and the World Bank.

[4] Rumah Pemilu,"Gambaran Singkat Pemilihan Umum 2014 di Indonesia", 3 July 2014. Available from http://www.rumahpemilu.org/in/read/3351/Gambaran-Singkat-Pemilihan-Umum-2014-di-Indonesia (accessed 25 October 2014)

| | | |
|---|---|---|
| | society. | allowing for citizens to interact more freely. |
| Citizen representation and voice | Strict control of speech, expression and association. | Burgeoning of CSOs, pressure groups and NGOs following the political euphoria after Suharto's fall. |
| | CSOs and their networks largely "hiding behind the screen", and operating under state surveillance. A period of growth occurred in 1995-98, as resistance was building. | Indonesian CSOs began to establish new networks internationally. Up until the early 2000s the focus was on state-centrist issues. Later, issues that CSOs were tackling became more diverse, ranging from pluralism, poverty reduction to fulfilment of economic, social and cultural rights. |
| Media | No free press, censorship and state-control. Suharto had firm grasp over how to use print & broadcast medias to promote political ideologies. | More vibrant media environment, flourishing of media businesses albeit in control of 12 main conglomerates that are mostly profit-driven and often have political ties. |
| | Limited public and CS use and access to internet until mid-90s. | Twitter nation, widespread social media use. |
| | | Growing realization of the importance of media/free press as the fourth pillar of democracy. |
| Artistic forms of expression | Art and literary censorship conducted by the state. Art forms were a means to reinforce political order. | Greater freedom of the arts and cultural sectors. Organisations able to hold art events more freely. Freedom of expression a catchphrase amongst individuals and artistic groups, but challenged by more conservative members of society. |
| Religious expression and organisation | Regime repressed religious groups, especially radical forms. | Emergence of religious groups seeking to restore Islamic values and defend Muslim values. |

With political reforms came greater freedom and space for civic engagement. In the Reformasi period, there was a remarkable increase in the number of civil society organisations, many of which were Islamic in character. In 2000, the Central Agency on Statistics (BPS) recorded around 70,000 registered organisations, compared to just 10,000 in 1996.5New groups sprung up with donors encouraging activists to establish NGOs they could fund. These organisations were eager to distance themselves from state and often took an anti-government stance. Proliferating CSOs and NGOs have taken advantage of decentralization and greater regional autonomy to engage in public affairs. Civil society and government relations have improved, although both sides remain sceptical of the others' intentions.

### 2.1.2 Recent trends in the political context

Indonesia is considered to be a story of democratic success, but it still struggles to realize the benefits of sustained and equitable economic growth. In the political context, the main challenges lie in governing such geographically vast and decentralized country, applying principles of good governance and the enormous task of reforming the country's bureaucracy.

Although, Indonesia's 'big bang' decentralization initiated at the turn of the century narrowed the gap between local government and citizens, it has also localized political power struggles. While the devolution of authorities relieved tensions between the central government and the regions, it has also created opportunities for corrupt and rent-seeking practices, at the local level. As indicated by Transparency International's corruption index scores, perceived corruption in Indonesia remains high.

Table 2

*Transparency International's Global Corruption Barometer survey: Indonesia*

| Year | Corruption perceptions Index Score<br>*(0 perceived as highly corrupt and 100 perceived as clean)* | Rank |
|---|---|---|
| 2011 | 30 | 100/182 |
| 2012 | 32 | 118/174 |
| 2013 | 32 | 114/177 |

Source: Transparency International

In 2013, decentralization was taken a step further with the approval of the Village Law, intended to address weak governance arrangements and empower rural communities to participate politically. The new law could also lead to village elites distorting power relations and misusing government funding if not properly monitored.

Indonesia is still transitioning politically and many challenges lie ahead. According to the 2012 Indonesia Governance Index's Executive Report, "Indonesia is witnessing a paradox in its democracy. On one hand, a successful opening-up of civil liberty has led to the avalanche of democratic demands across the nation, however on the other hand, democratic institutions' are inadequately respond to those demands." Nonetheless, the Indonesian Governance Index, which focuses on measuring provincial governance, does show a general improvement in the performance of the government (political office) bureaucracy, civil society and economic society based on principles of participation, transparency, fairness, accountability, efficiency, and effectiveness between 2008 and 2012. Civil society scores improved the most significantly, while scores for bureaucracy rose slightly.[6]

Table 3

*Indonesia Governance Index: Average provincial scores*

| Arena | 2008 | 2012 |
|---|---|---|
| Government | 4.93 | 5.46 |
| Bureaucracy | 5.53 | 5.58 |
| Civil Society | 4.85 | 6.33 |
| Economic Society | 4.77 | 5.71 |

Source: http://www.kemitraan.or.id/igi

In the past decade, Indonesians have generally enjoyed a freedom to participate in the political process through a direct-election mechanism. However, in September 2014 lawmakers voted in favour of a bill reviving indirect elections of regional heads. The controversial vote provoked public outcry which saw peaceful protests and the public voicing their discontent through social media. In early October, just before the end of his term, president Yudhoyono issued a regulation in lieu of the law, effectively repealing the law until further judicial review.

[6] The IGI uses a scale of 1 (lowest) to 10 (highest). Data is available online through their website. Indonesia Governance Index, Data, "IGI Executive Report". Available from http://www.kemitraan.or.id/igi/index.php/data/publication/factsheet/275-igi-executive-report (accessed 25 October 2014)

The recent 2014 elections which marked the end of Yudhoyono's 10-year term, demonstrated that Indonesian voters are increasingly voting for popular figures irrespective of political party alliances. While practices of corruption, vote-buying and poor voter administration remained in the recent election, the public seems to have matured politically, indicated by the enormous interest in televised debates between the leading candidates. The appeal of the newly sworn in President Joko Widodo, popularly known as Jokowi, has come from his hands-on, man-of-the-people approach. As Jokowi begins his five-year term he will need to start addressing a myriad of challenges that include corruption, stagnant economic growth, and human rights concerns, particularly with respect to the rights to freedom of expression, peaceful assembly, and religious intolerance. If left unaddressed, these challenges could seriously undermine Indonesia's stability and democratic reforms.

## 2.2 Civil Society context issues

Several important changes took place during the 2011 and 2014 period. First, the global financial crisis and Indonesia's rise to a middle-income country led to a decrease in international donor funding. Development actors, including CSOs and NGOs, have to compete harder for funding. Some have been more successful than others in diversifying funding by turning to the private sector or private foundations. At the expense of past idealism, local NGOs are now more disposed to receiving funding sources which in the past may have been criticized as supporting neoliberalism.

Regulatory changes also affected the civil society arena positively and negatively. Amongst the more controversial laws to spark reaction was Law No. 17/2013 on Societal Organisations. In an open letter sent before the bill was enacted, CIVICUS said the law would undermine freedom of association and "prevent CSOs from working on sensitive topics related to good governance and democratic reform in the public interest".[7] FORUM-ASIA deplored the repressive provisions in the law that "leave all groups vulnerable to attacks, undermining the hard-won democratic space that has been forged by civil society since the end of the New Order regime."[8]

Other laws passed that provoked criticism were the State Intelligence Law (October 2011) and the Social Conflict Law (April 2012). NGOs and media see these laws as imposing further restrictions on freedom of speech, potentially leading to the criminalization of human rights defenders and signifying a tightening of state control. Discriminatory content was also an issue in discussions on the Religious Harmony Bill in 2013, for which drafting was initiated in despite not being part of the planned National Legislative Program. Late in 2013, the House of Representatives came under fire again for its weak stance against religious intolerance when it re-endorsed a law that limits state-recognized religions to six.

Land rights and natural resource protection have been a long-standing issue for Indonesia. While Indonesia has adopted and amended laws to improve the rights of smallholders and indigenous communities, many of these regulations have faltered in their implementation. Part of the issue lies in the overlap and lack of clarity of laws adopted that regulate different sectors and local legislation. Another issue is that there is a lack of oversight in the procedures such as granting permits and licensing. These problems, which are commonly found across development sectors, are compounded by a lack of information among local communities on what the laws regulate and their rights vis-à-vis them.

# 3 Description of RUANGRUPA and its contribution to civil society/policy changes

## 3.1 Background of RUANGRUPA

Established in January 2000 by six artists in Jakarta, the aim of Yayasan RUANGRUPA is to give critical views on Indonesian urban contemporary issues. RUANGRUPA focuses on supporting the development of art in the cultural context through research, documentation, exhibitions, residency programmes, art projects, workshops and publication. It promotes collaborative projects involving artists and other disciplines, such as social science, politics, technology, and media. This collaboration is based on the realisation that art can no longer stay passive and isolate itself from reality.

Since its establishment, RUANGRUPA has initiated many art activities, playing a strategic role in providing knowledge on the development of artists' initiatives in Indonesia. It has built its credibility as a progressive and a visual arts organisation that is consistently providing alternative views on urban contemporary art compared to many other artists' initiatives.

## 3.2 MFS II interventions related to Civil Society

RUANGRUPA considers market-oriented art, especially in urban settings like Jakarta, to be stifling creative expression. The organisation tries to challenge market-driven and commercialized art by providing opportunities and supporting artists to express themselves without compromising their idealism and values. Another basic problem that RUANGRUPA tries to address is the inadequacy of infrastructure for cultural development. With few spaces for artists to explore, meet and present their work, RUANGRUPA functions as a creative, autonomous workspace for artists. At the same time, events and exhibitions bring together the general public and artists in a non-exclusive contemporary arts setting. Hivos has supported RUANGRUPA because of its innovative approach and attention towards creating a new arts audience/public in Jakarta and other cities. In addition, the organisation plays an important role in the development of contemporary visual arts and building the capacity of video artists.

Hivos continues its support to RUANGRUPA because of its important role in the development of contemporary visual arts focusing on urban contemporary issues in Jakarta and in Indonesia in general. All four of RUANGRUPA's programmatic areas were supported by Hivos in the 2010-2013 period. These four areas are as follows:

1. Art Laboratory: Research and creative collaboration between artists with a focus on urban issues.
2. Support and Dissemination: Providing a platform to produce, promote, disseminate and sustain creative ideas from artists, critics, curators and cultural organisations in Indonesia.
3. Video Art Development: Promote video art as another form of visual art work to reflect, express and provide statements of the artists to reach a new audience, and in doing so increasing public appreciation for video art.
4. Research and Development: Conduct a series of studies and research to develop in-depth understanding and develop new strategies towards the recent contemporary art scene in Indonesia, in order to later position various forms of visual arts in new media.

Given its programmatic focus, RUANGRUPA has sought to be an initiator of alternative art spaces as well as being a knowledge centre of sorts. As an organisation, it has persistently focused on marginalized and alternative forms of art, and has tried to support independent artists with the means and capability to share their ideas and creativity with the public.

## 3.3 Basic information

Table 4

*Basic information RUANGRUPA*

| | | Details |
|---|---|---|
| Name of SPO | : | RUANGRUPA |
| Consortium | : | People Unlimited |
| CFA | : | Hivos |
| Start date of cooperation | : | 2003 |
| MDG/Theme | : | Governance |
| MFS II Project Name | : | Art space as support to the development of the arts within Indonesian contemporary culture (Project ID: RO SEA 1002716) |
| Contract period | : | December 31, 2010 – December 30, 2013 |
| Total budget | : | € 105,000 |
| Other donors if applicable | : | DOEN Stichting with contribution of € 95,000 |
| Estimation of % of budget for Civil Society[9] | : | 28% |

Sources: Project documents

[9] Costs that relate to civil society development or policy influence are those costs that possibly contribute to the development of the CIVICUS dimensions, excluding coordination and office costs; staff costs and financial reserves.

# 4 Data collection and analytical approach

## 4.1 Adjustments made in the methodology of the evaluation

The evaluation process started with an input-output-outcome analysis that utilized reports and other documents from the SPO. For RUANGRUPA the analysis was to some extent inadequate because it was based on project progress reports and other documents that mostly covered just the 2011-2012 period. In mid-2014 when the evaluation was initiated, RUANGRUPA had yet to submit its 2013 report to Hivos; while the existing reports were compilations from each of RUANGRUPA's programme units with little integration, and with only some of the units making an effort to report against target indicators. As such, the evaluation team was only able to benefit partly from the input-output-outcome analysis.

The evaluation team tried to follow the operational guidelines to a great extent, but was unable to have a workshop with all of RUANGRUPA's sub-groups as only one program manager was available at the time agreed upon. Other program managers as well as the director were three hours late and did not appear to pay full attention to the workshop nor did they make up for the lost time. In practice, the workshop was inefficient and lasted five hours during which the workshop took place in a rather sporadic manner. RUANGRUPA's board and field staff were not invited to the workshop. The evaluation team was unable to get averages or scores for each subgroup as participation was not consistent and the participants found the guiding questions hard to discern. The in-country team assigned the scores without further confirmation.

## 4.2 Difficulties encountered during data collection

During data collection the team experienced the following difficulties:

- It was difficult to agree upon a schedule for the evaluation workshop with RUANGRUPA since the SPO was organising two large events during the evaluation period. In addition, the impromptu character of RUANGRUPA made it hard to pin down the staff.
- To compensate for the lack of information from documented materials, the evaluation team utilized the workshop time to ask RUANGRUPA for any kind of documents that could be helpful in analysing changes in the civil society dimensions. However, three weeks later, RUANGRUPA only sent one document on their showcased events over the past five years (see Appendix 3).
- Since the workshop was largely inefficient and ineffective, the evaluation team was left with little indications as to whom could be contacted as external resource persons. As a result, the evaluation team was only able to conduct one interview with Jakarta 32° C during the fieldwork period.
- Workshop participants did not really understand, nor were they familiar with the CS indicators or the CIVICUS framework. They found it difficult to relate RUANGRUPA's situation with the indicators, although all of them participated in the baseline process. This lessened the effectiveness of the workshop.
- RUANGRUPA's logical framework was largely activity and output oriented, thus it was difficult to get required information at the outcome or impact level, which ideally should be part of a proposal or work plan. Given this challenge, as well as the abovementioned challenges, it was not possible to confirm RUANGRUPA's impact in inspiring the emergence of similar initiatives, nor was it possible to measure the satisfaction of Jakarta 32° C participants, or to identify how many (or whether any) CSOs have benefited from RUANGRUPA's produced knowledge. As a result, there were not many options of outcomes that could be selected to measure effectiveness through quick process-tracing.
- The current Hivos Programme Officer for the Expression and Engagement portfolio was not in charge of the programme during the 2011-2014 period. Hivos now manages its partnership with

RUANGRUPA directly from the Netherlands through the Arts Collaboratory initiative which is a program promoted by Hivos and Doen Foundation to support independent visual arts organisations in Africa, Asia and Latin America.

## 4.3 Identification of outcome for process tracing

Yayasan RUANGRUPA was not selected for in-depth process tracing, implying that only a quick scan has been made. 'Infrastructure for contemporary visual arts in Jakarta has improved' has been selected as an outcome to be measured for effectiveness. The selection is made with following considerations:

- Considering all the difficulties in collecting information, it still seemed sensible to find evidence to confirm this outcome's achievement.
- It is in line with RUANGRUPA's Theory of Change (ToC), as it is the aggregate of the ToC's preconditions 'networking' and 'increasing the capacity of society'.
- This outcome is relevant to RUANGRUPA's broadened focus to become a knowledge or resource provider, as stipulated in the proposal, and its mission to develop the arts infrastructure in Indonesia.
- This outcome is in line with MFS-II end line evaluation orientation for Indonesia to focus on strengthening the relations with other organisations in civil society to undertake joint activities.

# 5 Results

## 5.1 Results obtained in relation to intervention logic

Table 5

*Overview of results achieved in relation to project plan RUANGRUPA*

| Programme area | Description | Level of achievement |
|---|---|---|
| 1: Art Laboratory | Research & creative collaborations between artists focusing on urban and media issues. 6 exhibitions and 3 presentations involving 24 artists (6 of whom) women. Exhibitions draw 2,500 visitors. | Partially achieved: while detailed data for each year is lacking, positive progress overall. Lack of data on women artist participation. |
| 2: Support and Dissemination | Produce, promote and disseminate, and sustain creative ideas from artists, critics, curators and cultural organisations. 6 exhibitions (5 personal and 1 collective) showcasing the works of 30 artists (9 of whom women); 1 student artist exhibition (Jakarta 32$^{o}$ C); 3 art critics & 3 curatorial workshops (10 participants each); and website development. Exhibitions draw 8,000 visitors & website 60,000 online visitors. | Partially achieved: events took place as planned, drawing more than 3,500 a year. More than 100,000 visitors to the website and sub-domains annually. No separate curatorial workshops held, merged with other events. |
| 3: Video Art Development | Expand public appreciation for audio visual art work, and develop, collect and distribute video art works of Indonesian artists. Hosting a video festival (OK.Video) involving 50 artists and drawing 5,000 visitors. Each year, the work of 20 video artists produced & disseminated. Over 3 years 9 workshops held; exhibitions & video screenings in 5 locations in Java, Sulawesi, Sumatra, Europe and Australia, with 500 visitors for each exhibition; and symposium and book publication. | Insufficient information to draw conclusion: Data for 2013 not available (annual report). OK.Video festival took place in 2011 & 2013. In 2011, 134 artists participated from 30 countries; 37 from Indonesia. 150 works exhibited & 272 videos screened. No information of screenings in other locations. |
| 4: Research & Development | In-depth research and development. Publication of studies (1,000 copies-2 publications/year), an updated database of young contemporary artists and 3 public discourses and lectures annually. | Insufficient information to draw conclusion: Updated database available. Insufficient information about discourses, lectures and publications. KarbonJurnal experienced a vacuum. Street art was a research theme in 2010 – 2011. Unclear if anything was published other than a book on contemporary art and culture in Indonesia in 2012 (SIASAT). |
| 5: Internal organisational | Strengthened financial independence & revenue management through business unit, which contributes 20% of the overall costs, especially operating expenses. | Partially achieved: Business unit established in 2011 and started providing paid services to businesses. While RURU Corps (business unit) received growing interest, unclear how much it contributed to operational costs. No figures of financial contribution in reports. |

It is difficult to conclude the extent to which planned results in the SPO's intervention logic were achieved. This is due to several reasons. First, in mid-2014 when the evaluation was initiated RUANGRUPA had yet to submit its 2013 report to Hivos. Second, from RUANGRUPA's reports it appears that each programme division reports separately, which is then put together in a report. This means that there is little integration in the report and not all programme units have made an effort to report against target indicators. Despite a lack of information, overall the evaluators find that RUANGRUPA has been successful in creating a platform for the examination of ideas and urban space, bringing together artists and the general public. RUANGRUPA has established itself within the creative art sphere as a promoter of video visual art.

## 5.2 Changes in civil society in the 2012-2014 period ?

### 5.2.1 Civic engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

RUANGRUPA's interventions are intended to provide a network and an alternative space for artists in Indonesia, especially for young independent artists in Jakarta. Through the Ruru Gallery, Jakarta 32° C festival and the OK.Video festival, RUANGRUPA provides platforms for aspiring artists to present their work while introducing the public to new forms of artistic expression. The SPO has also embraced the Internet as a medium to engage the public, with several web-based platforms being created for events and for groups it supports.

In the documentation and reports of RUANGRUPA, audience and participating artists figures are not consistently captured because the SPO has not always collected participation data properly. Nonetheless, the SPO has made a name for itself through regularly hosted festivals. OK.Video, held at least every two years, has attracted international artists from more than 50 countries and is considered a barometer for contemporary video development. Jakart32 festival, another well-known event, has been growing in size with over 100 participating artists each time it was held and up to 4,000 visitors in 2012. In 2010, RUANGRUPA initiated the Record Music Festival (RRRec Fest), which attracted more visitors the second time it was held, growing from 2,200 to 2,500 in 2011. The festival provided a venue for independent musicians and artists to collaborate through music and videos. Ruru gallery also had more visitors in 2012 compared to 2012, although fewer artists participated in exhibitions.

It is difficult to quantify whether women's participation has improved with regards to audience participation since there is insufficient data. However, fewer women artists participated in exhibitions hosted by Ruru gallery in 2012 compared to 2011 (from 21 percent to 15 percent).

Both Jakarta 32° C and OK.Video festival have become large enough to warrant the creation of separate divisions under RUANGRUPA, with independent planning and capacity to relate to other organisations. The personnel involved are selected from event alumni. As such target groups have become more engaged in planning, implementing and making decisions related to RUANGRUPA's regular events.

As illustrated above by the regular RUANGRUPA-hosted events, there have been decreases in some areas with regards to participation. This is partly due to a shift in the SPO's strategic orientation from becoming an imitator or pioneer of alternative art platforms to becoming a knowledge producer and developer. The SPO does not have a specific political agenda, since their focus continues to be on supporting the development of contemporary art and artists.

**Score baseline 2012 on an absolute scale from 0-3: 3**
**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.2 Level of organisation

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

Since the baseline, RUANGRUPA has improved its level of organisation. With regards to defending the interests of marginalized groups, the artists supported by RUANGRUPA are those that are marginalized by the dominance of commercialized art. With the absence of government support or museums, artists not oriented to the market are provided with a space for expression. RUANGRUPA also provided space for female artists, although the percentage of female artists remained small in comparison to their male counterparts (just below 21% in 2010 and 2011, and 15% in 2012). Young upcoming artists constitute the main target group, especially those exploring contemporary visual arts. Since the baseline there was generally an increased level of engagement of these artists.

The SPO maintains partnerships with other artist-run organisations in Java and has been recognized as an Indonesian contemporary arts actor. RUANGRUPA is now one of the associate partners for the Arts Collaboratory initiative in Indonesia, which has helped it expand its domestic network. As during the baseline, RUANGRUPA also continued to be engaged in the Indonesian Coalition for the Arts, which aims to improve government support for artist-run initiatives and a more enabling environment to promote independent art.

Relations with Forum Lenteng and Serrum, RUANGRUPA's closest allies, have intensified since the establishment of RURU Corps, a joint venture established to respond to the need to generate financial resources as well as to promote the work of supported artists.

Internationally, RUANGRUPA has successfully networked with art institutions and organisations in a number of countries, taking advantage of the opportunities offered under Arts Collaboratory to disseminate its work and share experiences. Festivals and events hosted by RUANGRUPA in Indonesia have invited the participation of international artists. OK.Video and Jakarta 32° C are not just barometers for Indonesian arts, but are also receiving international recognition.

Since 2011, RUANGRUPA has worked on diversifying funding streams. Although there has been some degree of success with the establishment of RURU Corps and external financial support from the Ford Foundation, international donor dependency has remained relatively high. This is also influenced by external factors, namely the lack of support from the Indonesian government for artist-run initiatives.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): +1**

### 5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision-making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

Since the baseline there has been no significant change in the SPO's downward accountability. Internal control systems between the board and the executive are in place although there are no reporting or evaluation mechanisms. The SPO does not have a dedicated monitoring or evaluation systems or personnel in place and reporting against targets, outcomes and impact is limited. The different units under RUANGRUPA function independently, but also work collaboratively. RURU Corps' income sources have been separated from RUANGRUPA's in an effort to maintain a focus on the civil society and engagement role of RUANGRUPA. Unfortunately, there were no available audit reports for RUANGRUPA for the period covered by this evaluation. As such, the evaluation team concludes that institutional audits have yet to take place.

The composition of the SPO's social organs remains unchanged with a mix of artists and non-art professionals. This reflects RUANGRUPA's intentions to engage actors beyond the art scene to contribute to meaningful discussions and discourses that are relevant to the environment in which it operates.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 0**

### 5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perceptions of both civil society actors (internal) as well as actors outside civil society are taken into account. Specific sub-dimensions for this evaluation are the extent to which the SPO has contributed to engaging more people in social or political activities, strengthening CSOs and their networks, and has influenced public and private sector policies.

Through its regular events, which include Jakarta 32° C and OK.Video festival, RUANGRUPA has been able to engage more with the general public. These events have also been venues for young students

to explore contemporary visual art forms. Some of these events, like the Jakarta 32° C festival have taken place beyond the Ruru Gallery venue, to include settings in Jakarta's urban landscapes as well as other cities. The approach of RUANGRUPA is rooted in the context of an urban city scape and is based on collaborative efforts between artist-run initiatives, artists and curators. However, it should be noted that Jakarta 32° C has recently supported fewer artists and displayed fewer artworks in favour of more workshops. This has been a conscious decision and an attempt to distinguish the organisation's role as a knowledge provider from a plethora of new initiatives and actors that have emerged and to maintain creative benchmarks in the contemporary arts scene.

Box 1: RUANGRUPA's reception

"To talk about the contemporary art scene in Indonesia, especially Jakarta, it's hard not to think of RUANGRUPA's name. Not only is it one of the most active art collectives in the city, their footprints are all over the city's contemporary creative scene. Using their own approach, RUANGRUPA helped shape the identity of Jakarta's contemporary art world. RUANGRUPA's modest approach revamped the Jakarta's creative society, making it more accessible to the public through their programs."

*http://www.whiteboardjournal.com/focus/18928/populist-art/*

"RUANGRUPA itself was the most active and consistent of all in focusing on developing the discourse and practice of video art in a stimulating way, by hosting a variety of video art projects, including music video workshops […] until they finally were able to hold, for the first time in 2003, the OK.Video: International Video Art Festival, which has continued to evolve and be held routinely since then. Today, everyone who is arts-literate knows and recognizes OK.Video as the first event in Indonesia to specifically address video, and to do so at an international scale, and it remains to this day the only one that organises regularly every two years."

*http://arsipfarahwardani.tumblr.com/post/81373125985/realities-of-contemporary-art-the-new-media-in*

While the organisation is now trying to become more than an initiator of contemporary art forms, it has built its reputation by experimenting in the area of visual and video art forms. This has supported the emergence of new and upcoming artists who have become popular in a contemporary subculture among youth in Jakarta interested in new forms of expression and alternative artists' merchandise. This has been aided by the use of the internet as a means to promote engagement with the public audience. RUANGRUPA has improved its online presence by developing specific web domains for events and areas of work. In 2012, it also began with streaming online radio content to engage audiences in discussions on a range of issues from a contemporary arts point of view. Unfortunately, RUANGRUPA has not monitored the impact of its interventions in stimulating discourses and artistic exploration of societal issues.

RUANGRUPA does not have a specific advocacy or lobby agenda other than its involvement in the Indonesian Arts Coalition, which has not had measureable impacts with regards to greater government support for artist-run initiatives. Government support, specifically the Ministry of Tourism and Creative Economy, did not extend beyond RUANGRUPA's events, the launching of a book, participation in government-hosted events and financing participation in a recent triennial abroad. The SPO has not actively sought out engagement with the public sector.

The relations with the private sector remain limited. RUANGRUPA engaged with a few small local businesses in Jakarta through the festivals it hosted. Some of these businesses were venues for arts dissemination while others helped sponsor events or stimulate dissemination of artwork. Media has been involved to gain better coverage of events. RUANGRUPA has focused on supporting alternatives to mainstream, market-oriented art forms. RURU Corps and Ruru shop can be considered as business entities, but their main aim is to support the promotion of alternative artists and artworks, as well as to stimulate the involvement of artists in shaping public spaces.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.5 Civil Society Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in Chapter 3. In this section we describe how RUANGRUPA is coping with that context.

The internet has been a very strategic medium to spread visual and video-based artwork. RUANGRUPA has utilized the internet to showcase its target groups' artwork, to disseminate archived knowledge and publications, to promote their events, and to attract youth participation. RUANGRUPA is aware that the internet is a tool that can be used to promote the development of discourses in contemporary arts.

In addition, many of themes and issues that are explored through artwork supported by RUANGRUPA are grounded in the surrounding context. These themes do not always have a political agenda and the majority of artworks produced explore contemporary, day-to-day issues.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 2**

## 5.3 To what degree are the changes attributable to the Southern partners??

### 5.3.1 Level of organisation & alternative engagement

*The outcome achieved*

Since 2000, RUANGRUPA has been promoting and supporting non-commercial video and visual contemporary artists that have been marginalized by the mainstream market. RUANGRUPA itself is very much an organization established by artists for artists. One of its missions is to develop the contemporary arts infrastructure. To do so effectively, RUANGRUPA needs to succeed in improving its internal level of organization and in creating forms of alternative engagement.

The evaluation team selected the outcome 'infrastructure for contemporary visual arts in Jakarta has improved' because there is evidence that RUANGRUPA has contributed, if not driven improvements. Indicators for this include audience receptiveness; RUANGRUPA's networking capability, the establishment of a separate business unit (RURU Corps), knowledge management initiatives undertaken by RUANGRUPA and in improved use of online media.

There are two pathways that can explain this outcome. The first attributes the outcome to the result of RUANGRUPA's improved reputation and capability as a resource in contemporary visual arts. The second considered the outcome as a result of the actions of other actors (market-oriented, public sector, or CS actors).

1. ***Pathway 1:*** RUANGRUPA has improved the platform for contemporary visual art in Jakarta. RUANGRUPA has been a pioneer in promoting contemporary visual arts to a wider audience who would unlikely have had the chance to explore this art from or have the chance to explore it as a freely-expressed art form without RUANGRUPA's intervention.

*Information that **confirms** this pathway:*

- Although contemporary visual art are openly accessible, RUANGRUPA is popular and distinguishable for their unusual and edgy approach and style[10].
- Art bloggers recognize RUANGRUPA as shaping the identity of Jakarta's contemporary art world[11] and a well-known initiator in the field of contemporary video art work[12]

[10] http://www.thejakartapost.com/news/2002/08/11/ruangrupa-unusual-edgy-art-forms.html
[11] http://www.whiteboardjournal.com/focus/18928/populist-art/
[12] http://arsipfarahwardani.tumblr.com/post/81373125985/realities-of-contemporary-art-the-new-media-in

- Audience receptiveness & growth of Jakarta 32°C: Jakarta 32° C has drawn at least 1,000 people as an audience in 2004. In 2012, the festival expanded its audience base to around 4,000 people[13]. Jakarta 32° C has inspired the emergence of similar events and contemporary visual art communities[14]
- Increased network of RUANGRUPA through international exposure [15] and more international artists' participation in the OK.Video Festival: from 10-20 in 2011 to 51 in 2013[16]
- RUANGRUPA is open to both professional artists, as well as young students wanting to express themselves and explore creative expression, such as the group Gambar Selaw.[17] Most of the Jakarta 32°C alumni (participating artists) worked in private sectors, and only a few decided to be professional artists[18]. This is evidence of RUANGRUPA's support of non-commercial art forms.
- RUANGRUPAhas a stronger position as a knowledge producer and developer: There are only a few actors who can be considered competent in contemporary visual arts knowledge from CS, the academic sector or the private sector. RUANGRUPA's director is also a lecturer for contemporary visual arts, but the academic institution with whom he is affiliated with is less approachable than RUANGRUPA[19]
- RUANGRUPA[20]has a library and a research and development unit. Its collection contains some 10,000 books and digital archives.[21]
- RUANGRUPA has established a business unit that can offer contemporary arts services to CSOs and private sector actors, such as advertising agencies. In 2011, RUANGRUPA decided to redistribute it's income generating capacity to its partner CSOs Forum Lenteng and Serrum through the foundation of RURU Corps; a visual communication agency. It is estimated that RUANGRUPA, Forum Lenteng, and Serrum have together made at least USD 30,000 in 2012. RURU Corps services range from publications, products, and event organising, or artwork installation [22]. In 2013, RURU Corps has made more profit than in 2012, and it plans to divide its accumulated profit for each CSO or to conduct a joint project. RUANGRUPA has strengthened its own, and Forum Lenteng and Serrum's sustainability and financial capacity[23].
- RUANGRUPA can offer a competitive consultancy price compared to advertising agencies, since their overhead costs have been covered via Hivos' support[2425].
- In addition to a traditional, offline presence in the form of a gallery and event hosting, RUANGRUPAhas strengthened its online presence

*Information that **rejects** this pathway:*

- It is easily observable that contemporary visual art has become generally more popular amongst the young urban population in Jakarta that seek alternative forms of expression.
- The number of artworks submitted for Jakarta 32° C decreased from 172 in 2008, to 128 in 2010 and 103 in 2012.[26]

2. ***Pathway 2:*** Other actors have improved the platform for contemporary visual art in Jakarta

Although RUANGRUPAhas helped promote contemporary visual arts to a wider audience, it is not plausible to conclude that they are the only contributing CSO actor.

[25] Analysis from RUANGRUPA budget
[26] http://Jakarta 32o C .org/home/festival/statistics/

*Information that **confirms** this pathway:*

There are a number of other organisations that have promoted contemporary visual arts in a less commercialized setting. These include the following:

- Kawanusa in Bali, who have been organizing community video festivals since 2007
- Kampung Halaman, Cemeti Art House, MES 56 in Yogyakarta
- Common Room in Bandung
- Forum Lenteng in Jakarta
- Video activists: KoPI, Offstream and Video Babes[27][28]

*Information that **rejects** this pathway:*

- Most of the organizations mentioned above operate outside of Jakarta. Those that do operate in Jakarta are partners of or collaborate with RUANGRUPA
- There is a general lack of initiatives and plans for better art infrastructure and development of state museums by the Indonesian government29
- Regardless of whether there is a 'hype' in contemporary visual arts, there is an increasing demand for contemporary visual arts content by private sector actors, especially for advertising purposes. The large demand allows RURU Corps to take part in the market share [30].

*Conclusion*

Based upon the analysis of information available, we conclude that the most valid explanation for the outcome is that RUANGRUPA has played a role in strengthening the infrastructure for contemporary visual art in Jakarta as well as an increased demand for contemporary visual arts. Hence, pathway 1 is *sufficient* in explaining the outcome.

*The role of the SPO*

RUANGRUPA's interventions have contributed to the emergence of contemporary art as alternative engagement and by strengthening the level of organization internally and for artists. RUANGRUPA has over the years built a reputation for itself as supporting new initiatives and is now emerging as a knowledge producer and provider.

## 5.4 What is the relevance of these changes?

### 5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

The Theory of Change (ToC) constructed during 2012 baseline illustrated that RUANGRUPA's ultimate goal was for a critical, creative, plural and inclusive society to take shape. The preconditions for this were the existence of public space, healthy engagement with the public and private sector and a capacitated and well-networked society. Public space for RUANGRUPA was the most strategic precondition. The critical assumptions rested on the need and demand for a public space separate from private or public sector actors, art being an effective media for civic engagement and RUANGRUPA being able to sustain itself in terms of values, personnel and finances. The changes achieved by RUANGRUPA in the civil society dimensions 'civic engagement' and 'level of organisation' are relevant to the ToC.

[30] see: http://rurucorps.com/home/work/mizone/ for an example

RUANGRUPA has contributed to the availability of public space through its support for regular events for contemporary visual and video art, as well as through its own gallery space. An increasing demand for public space is evident from the public's receptiveness and an increase in visitors and audience. The organisation has managed to keep initiatives independent, collaborating with the private and public sector for support of its interventions.

With regards to art influencing civic engagement, RUANGRUPA's interventions can be defined as following a 'discursive theory of action', intended to provide a setting for artists and the public to come together to discuss issues, connect and take action[31]. Artists and their art work supported by RUANGRUPA have included mural art, performance art, video art and other forms seeking to engage the general public. RUANGRUPA has also used online formats and websites to invite the general public to contribute in art works and be engaged. Discursive approaches have also been used to promote young, upcoming artists to explore themes relevant to their urban setting.

The institutional performance of RUANGRUPA has progressed, although the SPO still relies on external support to sustain itself. RURU Corps is a model for generating income through artistic services that can be offered to the private or public sector. There has been sufficient re-generation amongst the personnel of the SPO and each unit of RUANGRUPA has its own team that seems to function independently, whilst maintaining collaboration with other units and divisions. Since the baseline, RUANGRUPA has improved its engagement with other like-minded actors and expanded its international network. The SPO has been invited to a host of international events to share experiences or feature work produced through the organisation's support in countries like Australia, Japan, South Korea, The Netherlands, Colombia, Brazil, Singapore, and China. This expanded the SPO's network and helped establish itself as an international player in contemporary arts.

### 5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

With regards to the context in which RUANGRUPA is operating, its interventions and outcomes achieved are relevant because the organisation has defended those marginalised by market domination in contemporary visual arts and public spaces.

During the Suharto era, much of the cultural and artistic discourse was political and opposing the regime[32]. As the Indonesian economy began to develop in the 80s and 90s, a demand for commercial artworks saw the rise of commercial art galleries. In the same period, cultural institutions like Erasmus Huis, Goethe-Institut and the Japan Foundation took a footing in Indonesia and began supporting performances, exhibitions and artist exchanges[33]. Alternative spaces, like Cemeti Art House, began emerging in the early 90s[34]. Following the fall of Suharto in 1998 and Indonesia's democratization, new artistic directions began to take shape[35]. This development continued into the early 2000s with the establishment of RUANGRUPA and other arts centres and organisations.

Since 2007-2008, there has been a boom in commercialized art, with high demands for Indonesian art globally. In 2008, a contemporary art work of Nyoman Masriadi was sold with a lavish price tag of 1 million US dollars[36]. In the midst of the art market boom, a few upcoming artists became 'market

[36] Ibid

darlings', leading to tension between young aspiring artists and indirectly led to the development of spaces for progressive artwork in isolation of market forces[37].

The Indonesian contemporary art scene has developed in the absence of strong art institutions, museum support and state financial support. This gap has been filled by private sponsors and collectors and has contributed to the dominance of commercialized art forms[38]. Given the increased freedom of expression and speech since the late 90s, there has been a growth in independent art centres like RUANGRUPA[39]. Since 2010, international exposure for both market and alternative art actors has grown, as has the local art scene[40]. Independent organisations have become sites for multidisciplinary communities to come together to discuss all sorts of issues with a common desire to engage with urban space partly in reaction to the commercialization of the Indonesian art market[41].

Given this context, RUANGRUPA's achievements have been very much relevant as they have consistently offered an alternative scene for artists and practitioners to explore new media. RUANGRUPA is simultaneously a site of production as well as a focal point for projects of social improvement, without selling out to the commercialization trends[42].

### 5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

The support provided to RUANGRUPA falls under Hivos' Expression and Engagement programme. This programme aims to generate social debate and cultural dialogue in order for a dynamic culture and new perspectives to emerge. Hivos considers space for socially engaged art and culture to be limited in developing countries and sees art and cultural expression as a means to generate critical reflection, pluralism and diversity.[43] "For Hivos, culture, media and other forms of communication are important means to promote citizenship" and a means to challenge dominant ideas[44].

RUANGRUPA was supported because its creative ideas were in line with Hivos' focus. The SPO is considered to have an "important role in in the development of contemporary visual arts in Jakarta and in Indonesia in general". Hivos supported the SPO because of the "extrapolation effects of events happening in Jakarta to other areas in Indonesia and because of its innovative approach and attention towards creating a new arts audience/public".[45]RUANGRUPA is considered a strategic organisation that has promoted progressive ideas and a network/coalition that works on strengthening cultural infrastructure.

According to the current Expression and Engagement programme officer of Hivos' Regional Office for Southeast Asia, Hivos has continued to support RUANGRUPA because it has proven its ability to host regular workshops and events. In doing so RUANGRUPA has created a space for artists to experiment, while expanding organisationally through the creation of different units.[46]

Through the Arts Collaboratory initiative, support is being continued with the partnership now being handled directly by Hivos' headquarters. Arts Collaboratory consider culture to be a potential driver of

social innovation and change and views artistic processes as a means to facilitate relations that bring people together to develop new perspectives[47].

## 5.5 Explaining factors

### 5.5.1 Internal factors

RUANGRUPA is not wholly dependent on a single leadership figure to determine the direction of their organisations. Besides Ade Darmawan, the well-recognized cofounder and director, there are other figures that have emerged from the ranks of RUANGRUPA like Hafiz, Reza 'Asung' Afisina and Indra Ameng[48].The international scope of events and RUANGRUPA's participation in biennials abroad have brought recognition for curators, artists and directors opening the way for a new generation of artists to emerge[49].

RUANGRUPA has not applied an open recruitment mechanism. Given the increasing number of events and scope of activities, the personnel were prone to being overworked and overburdened. The establishment of separate divisions for Jakarta 32°C and OK.Video, as well as the establishment of RURU Corps, can be seen as an effort to deal with this issue, as well as to improve the involvement of RUANGRUPA's target groups and strengthening the organisation's (and other CSOs) financial capacity.

RUANGRUPA has a relaxed, egalitarian, informal, and friendly working atmosphere which suits with its target group characteristics. As an open-house, target groups often come to RUANGRUPA just to hang out and interact with RUANGRUPA personnel. With busy schedules and an expansion of target groups, as well as the emergence of many new art spaces, RUANGRUPA has decided to shift their focus from being an initiator of alternative art spaces into a resource provider. Generally speaking, RUANGRUPA has been able to cope with changing contexts and adapt to situations quite well.

### 5.5.2 External factors

Contemporary visual arts and the internet have a highly mutual relationship. As an art space that is separate and relatively free from direct market intervention, the internet has contributed to the widespread application of contemporary visual arts, which in turn has shaped the internet society. As the internet society and its users have grown, the demand for contemporary visual content has also increased.

A similar relation also exists between contemporary visual arts vis-à-vis urban contemporary sub-culture. Private sector and more market-driven actors have contributed to the emergence of new alternative and creative expression. As a potential niche, there has been an increasing demand for contemporary visual arts content or alternative approaches to marketing strategies of private sector actors. RURU Corps has been created to deal with this particular factor and to help non-mainstream artists promote their work. With contemporary art becoming one of the latest trends in Indonesia[50], this presents both opportunities as well as threats for artist-run initiatives like RUANGRUPA. On the one hand it may contribute to increased audience appreciation, while on the other hand it could discourage more critical and provocative discourse. It is generally harder for alternative art spaces like RUANGRUPA to garner interests among artists to work on experimental projects because of the

dominance of market orientations in Indonesian arts. Many of such organisations have to "navigate between idealism and commodity"[51].

### 5.5.3 Relations CFA-SPO

RUANGRUPA has received support from Hivos since the early 2000s. Funds from Hivos in the 2012-2014 period were also used to support its organisational capacity building, specifically in the areas of developing a business unit and improving organisational practices. In addition, RUANGRUPA has benefitted from the Arts Collaboratory, a joint initiative supported by Hivos and Stichting DOEN. Arts Collaboratory recently began a second phase of financial support focusing on the development of new perspectives on specific contextual issues and new forms of collaboration[52]. With the appointment of RUANGRUPA as an Arts Collaboratory associate partner in 2008, RUANGRUPA's stature has grown nationally and internationally.

# 6 Discussion

## 6.1 Design of the intervention

The art scene in Indonesia is concentrated in Jakarta, Yogyakarta, Bandung and Bali. In Jakarta, there are few home-grown organisations that have had the same level of success as RUANGRUPA. Some other non-profit organisations and artist-run spaces that have a made a name for themselves in Jakarta include Lontar Gallery, Bentera Budaya, Forum Lenteng, and Engagemedia. In Yogyakarta, one of the most successful artist-run initiatives has been Cemeti Art House. Like RUANGRUPA, the organisation promoted Indonesian contemporary art nationally and overseas by providing a space for artists to explore critical expression, and by supporting collaboration, networking and residency programmes.

Since 2008-2009, RUANGRUPA's interventions supported by Hivos have been designed around four main programmes or areas: 1) Art Laboratory – providing space for research and artistic collaboration; 2) Support and Dissemination – finding, promoting and sustaining creative artists, critics, curators and arts organisations through workshops, exhibitions and events; 3) Video Art Development – focusing on supporting and promoting alternative non-mainstream video art; and 4) Research and Development to create better understanding of and develop strategies towards the contemporary art scene. As an Artist-Run Initiative (ARI), RUANGRUPA has successfully combined different models[53] that include experimentation and exhibition format, an open and informal environment to initiate and redefine artistic practices, and regular festival programming.

According to RUANGRUPA, its strategy and success is not necessarily replicable in other context. This is because the urban context in which art initiatives operate vary from place to place, which requires adjustments in the approach and activities implemented. On the other hand, there are more events emerging in Jakarta that cover visual and video art. But it is difficult to assess whether similar events were inspired by RUANGRUPA. The SPO has brought contemporary art closer to the masses so to speak, making it possible for those without an artistic background to take part in shaping the discourse.

Like so many other ARI's, RUANGRUPA faces a number of challenges and opportunities that are defined by its more informal model of organisation. Advantages include flexibility, immediacy and direct approach (often covering everyday subjects in artworks, including socially marginal subjects and issues), enthusiasm from its target groups (i.e. non-mainstream and non-commercial, often young artists), collaboration with other groups in both informal and formal settings, and lower operational costs. Disadvantages include weaker management structures, financing difficulties, a lack of influence over decision-making and policy, and less visibility and unmeasured or limited impact.[54]RUANGRUPA's interventions include activities designed to address some of the challenges. For example, RURU Corps as a collective initiative seeks enterprising means to contribute to the institution's sustainability and regeneration. In fact, one of the reasons for establishing the Indonesia Arts Coalition, of which RUANGRUPA is a part of, was to address the need to advocate for more support of non-profit arts

[53] Gallery Models – low-fi auxiliaries of established modes, providing spaces for experimentation in exhibition format, as well as the development of professional skills in areas such as administration, curation and negotiation; Practice Models – the extension of prior learning within an open peer environment to define and refine artist practice through critical development of preconceived forms; Project Models – the locus for short-term, temporary or one-off projects that critically exist within conceptual or predetermined situations such as artist publishing or festival programming, and; Collective Models – a non-spatial but centralised focus for formal and informal group activities based on shared artistic, philosophical or material enquiry." See: Din Heagney, "A History of Success?". Available from: https://visualarts.net.au/media/uploads/files/Din_Heagney_ESSAY.pdf (19 December 2014)

[54] The advantages and disadvantages are based on those mentioned in UNESCO supported Master Thesis, "Artist-run Initiatives Advantages and Disadvantages of the Informal Model in Societies in Transition" MARIJA SKOKO, September 2011, that explores ARIs in Serbia.

organisations since coalition members are dependent on international funding[55]. The impact that RUANGRUPA wishes to have as an actor of change on policies and practices is less clear in RUANGRUPA's design. Despite RUANGRUPA's engagement with the Indonesian Coalition for the Arts, which also seeks to improve the cultural policies of the government, there are no specific actions designed in the area of policy advocacy.

[55] Mella Jaarsma and Ninditya Adipurnomo, "What are We Waiting for?", ArtAsiaPasific Nov/Dec 2012. Available from http://artasiapacific.com/Magazine/81/WhatAreWeWaitingFor (accessed 19 December 2014)

# 7 Conclusion

RUANGRUPA has successfully promoted and supported non-commercial visual contemporary artists that are being marginalized by the mainstream market. The organisation itself is an artist-run initiative which has successfully undertaken different streams of work that have resulted in improved infrastructure for contemporary arts in Jakarta. The general public has been largely receptive to RUANGRUPA's exploration of public space and the artworks it has to offer. The SPO has maintained a reputation for being an initiator and is now emerging as a knowledge producer and provider.

The changes that attributed to the SPO and MFS II funding, as well as to longer-term Hivos support, are the improvements in civic engagement, level of organisation and civil society impact. With MFS II funding, RUANGRUPA has continued to provide a space for artistic collaboration and hosted regular events that supported the dissemination of contemporary art forms. RUANGRUPA has been one of the few actors in Indonesia to promote and support video art development, focusing on providing opportunities to young, upcoming artists who otherwise might not have the opportunities to develop explorative forms of art.

The aforementioned changes are relevant to the 2012 Toc, the context in which RUANGRUPA is operating in, and polices of Hivos. Public space for RUANGRUPA is one of the most strategic preconditions in its ToC and the critical assumptions rest on the ability of RUANGRUPA to sustain itself as an organisation and its ability to support alternative engagement. RUANGRUPA has contributed to the availability of public space through its support for regular events for contemporary visual and video art, as well as through its own gallery space. The SPO operates in a context where contemporary art has been dominated by market-oriented galleries. As such, the SPO has provided a space for artists marginalized by art commodities to engage in alternative forms of expression. As an independent, artist-run organisation, they have provided a platform for multidisciplinary communities to come together. These interventions are also very much in line with Hivos' Expression and Engagement programme which supports the generation of alternative forms of cultural expression.

Factors that explain the evaluation findings include RUANGRUPA's strength as a reputable contemporary arts organisation and its internal capacity to regenerate leadership in artist-run initiatives. Nationally RUANGRUPA has collaborative networking relations with a host of like-minded organisations. The SPO is recognized in the country and abroad for its innovative organisational practices and as being an initiator in the contemporary art scene. Hivos and Art Collaboratory support have contributed to the RUANGRUPA's growth and its networking capabilities. RUANGRUPA has adapted to external factors, which includes the emergence of the internet as a means to disseminate creative forms of expression and as a tool to stimulate interaction and developments in the contemporary arts discourse. The events and exhibitions organised have continued to explore themes that are relevant to the target groups as well as the context in which it operates.

Table 6

*Summary of findings.*

| When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements? | Score |
|---|---|
| The CS interventions were well designed | 7 |
| The CS interventions were implemented as designed | 6 |
| The CS interventions reached their objectives | 6 |
| The observed outcomes are attributable to the CS interventions | 6 |
| The observed CS outcomes are relevant to the beneficiaries of the SPO | 7 |

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

# Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration
- 1 = A slight deterioration
0 = no change occurred, the situation is the same as in 2012
+1 = slight improvement
+2 = considerable improvement

| Dimension | | Indicators | Question | Change |
|---|---|---|---|---|
| **Civic engagement** | 1 | Needs of marginalised groups | How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies? | +1 |
| | 2 | Involvement of target groups | What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities? | +2 |
| | 3 | Political engagement | How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups? | 0 |
| | | | | |
| **Level of organisation** | 5 | Relations with other organisations | In the past 12 months what has been the most intensive interaction you had with other CSOs? | +1 |
| | 5 | Frequency of dialogue with closest CSO | In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with? | +2 |
| | 6 | Defending the interests of marginalised groups | Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs? | +1 |
| | 7 | Composition current financial resource base | How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking? | +1 |
| | | | | |
| **Practice of Values** | 8 | Downward accountability | To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them? | 0 |
| | 9 | Composition of social organs | What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for? | 0 |
| | 10 | External financial auditing | How regularly is your organisation audited externally? | 0 |
| | | | | |
| **Perception of impact** | 11 | Client satisfaction | What are the most important concerns of your target groups? How do your services take into account those important concerns? | +1 |
| | 12 | Civil society impact. | In the past 12 months, what impact did you have on building a strong civil society? | +1 |
| | 13 | Relation with public sector organisations. | In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives? | 0 |
| | 14 | Relation with private sector organisations | In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective? | +1 |

| | | | | |
|---|---|---|---|---|
| | 15 | Influence upon public policies, rules, regulations | How successful have you been in influencing public policies and practices in the past 2 years? | 0 |
| | 16 | Influence upon private sector agencies' policies, rules, regulations. | How successful have you been in influencing private sector policies and practices in the past 2 years? | +1 |
| | | | | |
| **CS context** | 17 | Coping strategies | In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society. | +2 |

# Appendix 2 Changes in civil society indicators between 2012 and 2014

## 1 Civic Engagement

### 1.1 Needs of marginalised groups SPO

As during the baseline, RUANGRUPA continued to support young, idealistic artists with a space to explore and express themselves artistically, who otherwise may have lacked such opportunities in an environment that is normally dominated by commercialization and market-orientation. The artists that benefited from the space and support provided by RUANGRUPA worked on more contemporary urban issues and forms of expression that are generally less common in Indonesia. RUANGRUPA has reached audiences through regular festivals like Jakarta 32° C and OK.Video, but has also utilized the Internet to expand its reach.

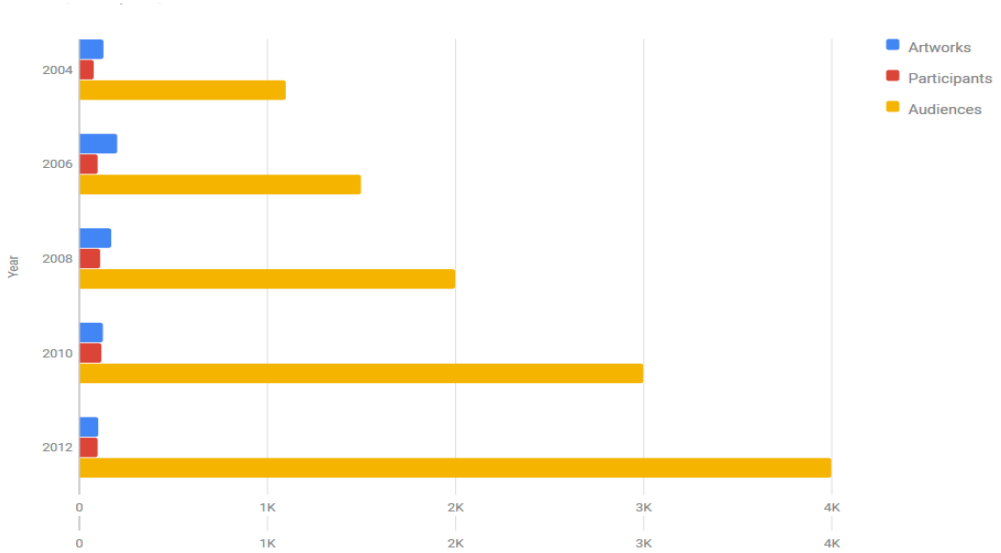

*Figure 2 Statistics Jakarta 32° C: Audience participation, artist participants and artworks. Source: http://jakarta32c.org/home/festival/statistics/*

Via the Jakarta 32° C festival, RUANGRUPA engaged more young student audiences with an increase of 40 percent every two years since 2004. During the event in 2012, 103 artworks were displayed attracting an audience of some 4,000 people, and around 100 artists, or aspiring artists, attending workshops organised during the festival[56].Although audience figures went up from around 3,000 in 2010, there was a drop in the number of workshop participants and artworks displayed (120 participants and 128 artworks in 2010).

RUANGRUPA is regarded as an 'avant garde organisation' because it has introduced video art in Indonesia on a relatively significant scale in the form of regular festivals. Since 2004 the OK.Video festival has become a national and international barometer for contemporary video development. In

[56] Jakarta 32°C, Previous Festival, "Statistics". Available from http://jakarta32c.org/home/festival/statistics/ (accessed 18 December 2014)

2011, it drew 500 applicants of which 60 were selected for display (10 by international artists and 50 by Indonesian artists[57]). In 2013, there were 303 applicants and 91 selected artworks (29 of them from open-submissions). What is significant is that since 2004, OK.Video has been able to attract more international artists from more countries: from 20 in 2011 to 51 in 2013[58].

RUANGRUPA also continued to host the annual RRRec Fest. In 2010, it was estimated that 2,200 people participated, which grew to 2,500 in 2011. This event engaged non-mainstream bands/musicians in promoting visual contemporary art.

The Ruru gallery of RUANGRUPA also had an increased number of visitors from 1,100 in 2011 to 1,203 in 2012[59]. However, the number of participating artists in exhibitions decreased from 135 in 2011 to 40 in 2012. Another RUANGRUPA event hosted twice since the start of 2011 has been the writing workshop. 29 young people were trained on how to write about contemporary art issues.

With regards to the participation of women, RUANGRUPA claimed to have encouraged women's participation by targeting a number of women artists or audiences in their projects. However, the evaluation team found that fewer women participated in 2012 compared to 2011, as seen in decreased women's participation in exhibitions from 21 percent to 15 percent. RUANGRUPA did not consistently track sex disaggregated data, making it difficult to assess whether this decreased participation was a common characteristic in all RUANGRUPA-organised events or not.

Given the nature of contemporary visual and digital artwork[60] and RUANGRUPA's target group characteristics there has been an increased use of the internet as an important space for expression of contemporary visual art. It is plausible that this digital technology has widened the reach for contemporary visual artists beyond that of commercial galleries or festivals, including those produced by RUANGRUPA supported artists and groups. For example, @thepopoh[61] now has 60,200 Twitter followers[62]and had 420,226 website visitors.

As illustrated above by the regular RUANGRUPA-hosted events, there have been decreases in some areas with regards to participation. RUANGRUPA explained that this decrease stemmed from the emergence of similar artistic initiatives[63] and by the SPO's strategic change in orientation to move further into becoming a *knowledge producer and developer* rather than a *mere initiator or pioneer of alternative art space or art activities,* as put forth in their latest proposal[64]. Unfortunately, there is little information available to measure the extent of RUANGRUPA's improvement with regards to its new orientation (see section 5.1).

## 1.2 Involvement of target groups SPO

Jakarta 32° C and OK.Video festival were RUANGRUPA's largest platforms in terms of audience and participation. Both have become separate divisions under RUANGRUPA, with independent planning and capacity to relate to other organisations. For example, OK.Video secured funding from the Japan Foundation support since 2011[65]. Jakarta 32° C participated in the Darwin Festival in Australia in August 2014, and plans to organise student exchanges with Willem de Kooning Academie of Rotterdam for their next event in 2015[66].

Both divisions consist of ad-hoc personnel selected from event alumni and committees. As such these divisions consist of RUANGRUPA's target groups. Hence, target groups have become more involved in

[66] "Interview with Jakarta 32°C", MFS-II evaluation 2014

RUANGRUPA's planning, implementation and decision-making processes, especially those relating to Jakarta 32° C and OK.Video events. However, RUANGRUPA's target groups have not participated in RUANGRUPA's organisational planning or evaluation exercises, but this is also because RUANGRUPA hardly conducts such strategic actions themselves.

### 1.3 Intensity of political engagement SPO

This indicator is less applicable to RUANGRUPA. The daily practices and organisational direction of the SPOs helps to set up the benchmarks in the art and cultural movement, not to engage politically. During the 2014 presidential election, most of RUANGRUPA staff and affiliates were clearly supporting one presidential candidate. They individually participated in creative campaigns through contemporary visual arts mediums. However, the organisation remained neutral and actually utilized the momentum to hold creative competitions amongst artists, engaging artists who supported both presidential candidates.

## 2 Level of Organisation

### 2.1. Relations with other organisations SPO

RUANGRUPA still closely works with CSOs with whom they share similar missions. As during the baseline, RUANGRUPA collaborates with the Jakarta Arts Council, the Indonesian Visual Arts Archive (Yogyakarta), MES56 (Yogyakarta), Jatiwangi Art Factory (East Java); and still shares target groups with traditional allies such as Forum Lenteng and Serrum.

However, RUANGRUPA has emerged to play a more important and leading role in its relations to other civil society organisations. Along with Kunci Cultural Studies, RUANGRUPA is Indonesia's associate partner of the Arts Collaboratory. Through Arts Collaboratory, RUANGRUPA has garnered a domestic network that includes the likes of Lifepatch, Langgeng Art Foundation, Jatiwangi Art Factory, Serrum, Forum Lenteng, Gardu House, MES56, and ISAD.RUANGRUPA worked with Hivos, Casco, and Kunci Cultural Studies to host the first Arts Collaboratory assembly in May 2014[67], which involved Indonesian and international CSO partners of Arts Collaboratory.

RUANGRUPA is also involved in the Indonesian Coalition for the Arts. This is a coalition which was established in 2010 to strengthen the cultural infrastructure from the civil society side and to push for improved cultural policy by the government.

Internationally, RUANGRUPA's network has been well developed through its own interventions as well as those with Arts Collaboratory support. From 2011 to 2014, RUANGRUPA has been working with more international organisations from Singapore, Korea, China, India, Germany, the Netherlands, Australia, UK, Australia, and Brazil (see Appendix5 for details).

RRRec Fest has also expanded RUANGRUPA's network into the Indonesian music scene, which often shares an audience with the alterative video scene. RUANGRUPA considers this form of collaboration to be mutually beneficial since development in music industry will increase demands for contemporary visual art products, and vice versa. In the last three years, the music festival has improved RUANGRUPA's relations with actors from outside the contemporary visual art sphere.

### 2.2. Frequency of dialogue with closest civil society organisation SPO

RUANGRUPA has been working more frequently with its traditional partners namely Forum Lenteng and Serrum as they often share personnel and have a common 'founding father' so to speak: Hafiz, the leader of Forum Lenteng and also a board of RUANGRUPA helped found both organisations. Their intense relationship has resulted in the materialization of RURU Corps in 2011. RURU Corps is a visual

[67] Casco, "Arts Collaboratory Assembly: Indonesia, Seminar/Room, 19 May 2014 – 25 May 2014". Available from http://cascoprojects.org/arts-collaboratory-assembly-indonesia (accessed 18 December 2014)

communication agency serving clients with contemporary visual art design services, expertise, event organising, or producing print and visual materials. RURU Corps acts as a business unit for RUANGRUPA, Forum Lenteng, and Serrum[68].RURU Corps should be appreciated as RUANGRUPA's initiative, and for the distribution of benefits generated to the strengthening of its partners.

RUANGRUPA's network has improved in terms of quantity and scope, but apart from hosting the Arts Collaboratory Assembly in 2014 and the establishment of RURU Corps, the evaluation team did not find further evidence that the intensity of relations or the frequency of dialogue has improved since the baseline.

## 2.3. Defending the interests of marginalised groups SPO

Contemporary visual art was born as an elite branch of visual art, and had been kept exclusive by market and profit-oriented actors. As such, by nature contemporary visual art tended to engage very little with audiences. As with other genres of art, the appreciation of contemporary visual artwork has often been driven by the market, sometimes to an irrational degree and creating opportunities for falsified artworks[69]. Artists have not been completely free to express themselves as their livelihoods depend on being able to serve market tastes. Public space for appreciation or critique of artwork has been limited and was also dominated by market preferences resulting in little diversity. Non-market oriented artists and their audiences have had little space for expression. Unlike cultural centres such as Yogyakarta and Bali, the Jakarta art scene has not been conducive for contemporary artists.

Female artists have also been traditionally marginalised due to a lack of acknowledgement from mainstream art critiques. Historically female artists have focused on feminine expression. Contemporary visual art holds opportunities for the advancement of women artists since this genre is less patriarchal than other visual art genres.

RUANGRUPA's mission has been to advance public services for artists marginalised by market factors since "*public interest values in media are threatened by access and control issues, diminishing the potential for millions to become better informed and engaged in the critical matters shaping the future*"[70]. RUANGRUPA is considered as an important actor in this regard[71].Given RUANGRUPA's mission, and based on the activities it has supported, its target groups can be defined as:

Students or youth interested in exploring contemporary visual art as artists, curators, or writers;
Interdisciplinary actors interested in urban issues, media, and public space issue;
Visual art stakeholders benefitting from RUANGRUPA's exploration, ideas, and knowledge production, and;
Female contemporary visual artists.

With increased target group engagement (as discussed in 1.1) and improved level organisation with other CSOs (2.1 and 2.2), RUANGRUPA has been more successful in improving their target groups' access and control in the development of contemporary visual arts in Indonesia. Their engagement is important to create a balance with market or other civil society actor domination of public spaces, to promote diversity and wider participation, and to ensure freedom of expression. Moreover, RUANGRUPA and Kunci were officially entrusted by the Arts Collaboratory to recommend grantees in Indonesia[72]. The latter highlights that RUANGRUPA is growing into a more important organisation in defending the interests of the contemporary visual arts community in Indonesia.

## 2.4 Composition financial resource base SPO

In 2012, RUANGRUPA received USD 150,000 from the Ford Foundation for mobile cinema screenings in ten underserved communities of Jakarta as well as to develop a mobile application for low-income vendors in Southeast Jakarta's informal economy[73]. This funding diversified RUANGRUPA's financial composition of financial resources, with non-Hivos donor support growing from 41 percent in 2011 to 79 percent in 2012.

With regards to short-term projects, RUANGRUPA has been able to draw on ad-hoc support to fund their activities. For example, RUANGRUPA was supported by the Ministry of Creative Economy to attend the Brisbane Triennial Festival in 2013. Other sponsorships allowed the SPO to attend the Sao Paolo Biennale in 2014 and a host of international exhibitions. However, apart from Ford Foundation and Hivos (Arts Collaboratory), RUANGRUPA has not yet received long-term donor support from other sources.

RURU Corps has been operational as a business unit for RUANGRUPA, Forum Lenteng, and Serrum. However, they have not yet decided how to use the accumulated profit, whether divided or used for joint activities. From the website of RURU Corps website, it seems that the business unit has been able to attract private sector clients apart from working upon RUANGRUPA-commissioned works[74]. In RUANGRUPA's financial report for 2012, the budget line tilted 'other income' totalled just USD 3,800, while a year prior they managed USD 33,000. RUANGRUPA's director explained that the decrease represented the amount of income that had been redirected to RURU Corps. He also added that in 2013 RURU Corps generated more income that 2012.

# 3 Practice of Values

## 3.1. Downward accountability SPO

Since the baseline there has been no significant change in the SPO's downward accountability. Although an internal control system is in place, including a supervisory structure, there are no reporting or evaluation mechanisms between the board and the management. The management team reported that they have conducted more meetings to evaluate their activities, as a consequence of more activities being conducted. But the SPO does not have dedicated monitoring or evaluation systems or personnel in place. The submission of reports to Hivos has also been late, as was the case with the submission of the 2013 progress report. The 2011 and 2012 reports were very similar in terms of content and were written along the lines of the organisation's structure rather than the agreed upon activities and results.

RUANGRUPA's decision to establish RURU Corps should be seen as an effort to improve organisational accountability, as by establishing a separate business unit with different income sources, RUANGRUPA intends to keep their identity as a civil society organisation. RUANGRUPA's director reported that in the near future RURU Corps will merge with other income-generating units (RRRec Fest, Rurushop, and Ruru radio) so RUANGRUPA can focus on its CS role.

## 3.2 Composition of social organs SPO

There has been no change in the composition of social organs of the SPO since the baseline. The composition of the board and the executive remain the same. The board of trustees and supervisory board of RUANGRUPA still consists of a mix between artists and non-art professionals, including academia. This composition is still in line with the organisation's strategy to bring together the creative and artistic domains with other public domains, although there are no artists on the board.

[73] Ford Foundation, Grants, "Yayasan Ruang Rupa". Available from http://www.fordfoundation.org/grants/grantdetails?grantid=116351 (accessed 18 December 2014)
[74] RuruCorps, "Works". Available from http://rurucorps.com/home/works/ (accessed 18 December 2014)

## 3.3. External financial auditing SPO

RUANGRUPA participated in a workshop organised by Hivos on transparency and accountability in 2011. RUANGRUPA itself recognized the need for a strategy to strengthen their financial systems and saw the workshop as an effort to improve their internal accountability[75]. No audit reports were made available to the evaluation team, although there were two audit assessments conducted by Hivos in 2011 and 2012. The evaluation team concludes that RUANGRUPA has not conducted an external institutional audit, as such there is no change from the baseline.

# 4 Perception of Impact

## 4.1. Client satisfaction SPO

Jakarta 32° C appreciates RUANGRUPA's role in engaging young students from at least 20 campuses or various study programmes to explore their interest in contemporary visual art. RUANGRUPA has provided space for free expression and appreciation, encouraged critical yet egalitarian art discourse, and promoted research-based collaborative-voluntary artwork development. The latter distinguishes RUANGRUPA's approach from other existing on-campus festivals. As a division under RUANGRUPA, Jakarta 32° C has become a more independent organisation and has organised roadshows in two provincial capitals to promote and trigger development of similar initiatives outside Jakarta. Jakarta 32° C has been recognized internationally, having been invited to participate in international events such as the more recent Darwin Festival in Australia in August 2014. RUANGRUPA is also planning to arrange student exchanges with Willem de Kooning Academie of Rotterdam for its next event in 2015.

Jakarta 32° C has been replicated into similar events held by universities, to an extent where it has caused a decrease in the number of selected artworks in recent events (due to lesser overall submitted artwork quality)[76]. Jakarta 32° C has coped with this by planning more workshops in upcoming events compared to artworks selection and presentations. In doing this, Jakarta 32° C is trying to shift from providing a venue or public space into becoming more of a knowledge provider, following along with RUANGRUPA's general organisational strategy.

RUANGRUPA has no evidence that the emergence of similar initiatives (contemporary visual art festivals or gallery-hosted events) that have increased in frequency since 2008 can be attributed to their interventions; but at the same time they do not reject that this may be a possibility. RUANGRUPA considers the emergence of new initiatives and events in the contemporary arts scene as positive development in civil society. The decision to cope with these changes by shifting the organisational strategy to becoming a knowledge provider has been a conscious one that aims to maintain the quality of contemporary art works. As a consequence, it is understandable that not all clients are satisfied with this coping strategy as RUANGRUPA has started to receive criticism for being more distant and elitist. In this regard, RUANGRUPA and Jakarta 32° C share the same opinion that they would rather risk receiving such criticism in order to trigger the emergence of new benchmarks in contemporary arts and to keep pushing for creativity of expression.

## 4.2. Civil society impact SPO

Although there is no tangible evidence-based research, RUANGRUPA is regarded by Jakarta 32° C and the Arts Collaboratory to be an organisation that inspires younger artists who then form their own communities in various cities or online platforms. RUANGRUPA's position as an Arts Collaboratory associate partner has helped bring international exposure to RUANGRUPA partners (as mentioned in 2.1) to support their sustainability as well as artistic development. RUANGRUPA has become a benchmark for a collaborative and contextual contemporary visual arts development. RUANGRUPA and its partners shared values of 'collaboration' and 'being contextual' is even seen as a unique approach

[75] "RUANGRUPA Annual Report 2011", RUANGRUPA, 2011
[76] Interview with Jakarta 32°C, MFS-II evaluation 2014, see also: http://jakarta32c.org/home/festival/statistics/

missing in other countries[77]. Unlike other participants of the 2014 Sao Paolo Biennale, RUANGRUPA was invited specifically to present its approach rather than its artwork[78].

RUANGRUPA can be considered successful in promoting inclusive contemporary visual art, freedom of expression, an egalitarian cooperation culture, and contextualization through their engagement with young students. These values are expected to be adopted by this younger generation for future, wider application. Although RUANGRUPA does not focus on improving young artists' livelihoods directly through marketing, some Jakarta 32° C alumni have actually earned their living through selling contemporary visual artworks which are not likely to be marketable through galleries[79], resembling a phenomenon known as "artist merchandising". This is phenomenon is possible since contemporary visual arts has become part of a contemporary subculture among youngsters in Jakarta, who in combination with other contemporary art forms, have created their own idols and market.

As RUANGRUPA promoted the creation of non-gallery artwork such as videos, their supported contemporary visual artists have utilized the internet as an alternative art space. As a result, their artwork has more potential to be accessed by a wider audience. The internet offers a space to engage a wider public with unlimited time, something market-oriented galleries cannot offer. There is also a higher demand from internet users for visual material. Thus contemporary visual art and the internet are mutually supporting. There are also examples of how internet users have used contemporary visual arts to advance various interests like political aspirations (as can be seen from this example[80]).

RUANGRUPA and its partners have improved its online presence[81], developing websites for each of its events that targeted between 50,000 and 60,000 visitors. In 2011, RUANGRUPA's main website was visited by 26,780 unique visitors and their subdomains visited by 80,991 unique visitors. In 2012, visitors to the subdomains reached 82,425 people and 19,677 unique visitors to the main website, with another 16,071 to the updates page. In 2012, RUANGRUPA also began radio streaming through the Rurushop radio. Online radio content covers topics from a contemporary arts point of view. RUANGRUPA has tried to improved civic engagement and level of organisation through the internet.

RUANGRUPA intends to engage the wider society, especially urban Jakarta, not by "coming up with solutions and providing answers", but by "*eliciting questions regarding societal issues and creating experiences that start people thinking*"[82]. However, RUANGRUPA has not monitored or paid special attention to measure this particular intended impact. Although art is a medium for communicating values and ideas, the nature of contemporary visual art itself allows for multiple interpretations. Hence, it is hard to measure whether RUANGRUPA's impact on civil society has reached beyond those related to or interested in contemporary visual art, or that it has contributed to other CS movements. In the baseline, the evaluation team noted that RUANGRUPA had helped KontraS, a vocal lobby CSO, in designing attractive and artistic campaign materials targeting youth audience. RUANGRUPA had also supported Sanggar Akar in designing attractive teaching material for homeless children. However, we did not find other or additional results during the end line evaluation.

## 4.3. Relation with public sector organisations SPO

RUANGRUPA does not have an advocacy or lobby strategy and conducts very few activities that directly affect policy-makers except through the involvement of RUANGRUPA's director in the

[77] Arts Collaboratory, Assembly: Indonesia, "Collectiveness vs Competitiveness". Available from http://artscollaboratory-assembly.tumblr.com/post/89566663327/collectiveness-vs-competitiveness (accessed 18 December 2014)

[81] Websites developed by RUANGRUPA: www.karbonjournal.org, www.ruangrupa.org, jakarta32c.org/, http://ruangrupa.org/web, http://decompression.ruangrupa.org, http://rrrec.ruangrupa.org, http://okvideofestival.org, http://bung.ruangrupa.org, www.jarakpandang.net
[82] Arts Collaboratory, "RUANGRUPA and the Shared History between Indonesia and Netherland". Available from http://old.artscollaboratory.org/projects/RUANGRUPA-and-shared-history-between-indonesia-and-netherlands-0 (accessed 18 December 2014)

Indonesian Arts Coalition(*Koalisi Seni Indonesia*), which aims to foster government support for the creative art industry through, for example, tax incentives for art-supporting corporations[83].

As a prominent collaborative artwork production platform, RUANGRUPA has been recognized by the Ministry of Tourism and Creative Industry as indicated in their sponsorship of RUANGRUPA's attendance to the 2013 Brisbane Triennial and the commissioning of four individual contemporary visual artists. However this support actually came as a surprise to RUANGRUPA since they do not consider themselves close to the ministry, nor did they engage in any specific efforts to establish collaborative relations with them[84].In 2013, RUANGRUPA participated in an exhibition on archives and documentation of contemporary art held by The Ministry of Culture and Education, which RUANGRUPA also considers an acknowledgment from the government.

Other than this, there have been some collaborative efforts with the public sector since the baseline, but these focused mostly on the events hosted by RUANGRUPA. For example, RUANGRUPA worked with Jakarta's Office for Tourism and Culture and the Ministry of Education and Culture to launch a book on the Jakarta 32° C festival in 2012. RUANGRUPA also participated in government-hosted events to showcase the work of young artists submitted to the OK.Video festival in 2012.

## 4.4. Relation with private sector agencies SPO

With the establishment of RURU Corps and Rurushop, RUANGRUPA has made a clear distinction in its position as being a non-market actor. RURU Corps and Rurushop have their own management and the income streams have been separated. While these business entities have become separate units, the relations that RUANGRUPA has with the private sector have increased since the baseline through RURU Corps.

RUANGRUPA engaged with a few small-scale local businesses in Jakarta through the festivals that it hosted. In 2011 the RRRec Fest was held in a location with many small businesses. A small bread shop and a local café became the locations for staging performances and screenings. RRRec Fest also collaborated with indie labels and production companies such as Demajors, Organic records and G Production. Similarly, RUANGRUPA collaborated with a number of private sector actors in the Jakarta 32° C festival of 2012, working with a printing company, local clothing brands, a beverage company and a bakery that helped sponsor the event.

RUANGRUPA also worked with private and public media (both print and online) to widen the coverage of its events. Media sponsors collaborated in the OK.Video helping to promote the festival and improve its effectiveness.

The contemporary visual art community's own artwork market is beyond the domain of private sector agencies (artist merchandise), but not for Rurushop who target this niche. Outside this domain, private sector agencies, especially for advertising, are beginning to recognize the appeal of contemporary art to promote their product. Some examples include Kedai Seni Djakarte[85], a cafe with contemporary visual-artistic touch which often holds artist discussions or artwork presentations (including from RUANGRUPA and Jakarta 32° C); or Pasar Santa[86], a recently flourishing food court for 'hipsters'. RURU Corps aims to benefit from private sector interest, and has worked for several brands such as Mizone, Otobursa, Google Chrome to promote their products[87]. Collaboration with Google Chrome utilized the Open Spaces application to promote the brand as well as mural art that was supported by RUANGRUPA.

[83] Koalisi Seni Indonesia, Program, Kebijakan Kesenian, "Insentif Pajak untuk Seni dan Budaya". Available from http://www.koalisiseni.or.id/program/kebijakan-kesenian/insentif-pajak-untuk-seni-budaya/ (accessed 18 December 2014)
[84] Kharisma Prasetyo, "Evaluation Workshop RUANGRUPA", MFS-II evaluation 2014

[86] Twitter, "#jajandipasar". Available from https://twitter.com/hashtag/jajandipasar (accessed 18 December 2014)
[87] RuruCorps, "Archives". Available from http://rurucorps.com/home/work/ (accessed 18 December 2014)

### 4.5. Influence upon public policies, rules, regulations SPO

RUANGRUPA's involvement in the Indonesian Arts Coalition has not had an impact on the public sector. Apart from supporting RUANGRUPA's participation in the 2013 Brisbane Triennial, there has been no direct effort to strengthen the cultural infrastructure or policies of the Ministry of Tourism and Creative Industry or special attention to contemporary visual art.

In 2013, RUANGRUPA's Jurnal Karbon (a RUANGRUPA-produced journal) worked with the Center for Law and Policy to organise a training on people's rights in the midst of the domination of commercialization of Jakarta's public spaces. This was funded by Tifa Foundation and resulted in the publication of a book. It is unlikely that this publication had much influence.

### 4.6. Influence upon private sector agencies' policies, rules, regulations SPO

This indicator is less applicable to RUANGRUPA since the organisation aims to support non-mainstream art forms and artists. There has been a growing trend in Jakarta for alternative public spaces that combine creativity with small businesses. It could be argued that RUANGRUPA is part of this trend or has influenced the trend, but there is insufficient evidence to draw this conclusion.

# 5 Civil Society context

## 5.1. Coping strategies

The internet has been a very strategic medium to spread visual and video-based artwork. There is also a high demand and interest for visual contemporary art. As the Director of the Visual Arts Network in South Africa, Joseph Grayland, pointed out, the proliferation of internet access and web-based technologies have provided the fuel for RUANGRUPA projects that is predicated on dynamic networks and the smart use of technology.[88] As such, RUANGRUPA has utilized their website to showcase their target groups' artwork, to disseminate archived knowledge and publications, to promote their events, and to attract youth participation with its contemporary design and issues covered. RUANGRUPA has an online radio and several subdomain websites:

- ruangrupa.org
- okvideofestival.org
- jakarta32c.org
- artlab.ruangrupa.org
- decompression.ruangrupa.org
- rrrec.ruangrupa.org
- rurushop.ruangrupa.org
- rururadio.org
- bung.ruangrupa.org
- www.jarakpandang.net
- www.karbonjournal.org
- rurucorps.com

From the attractive website designs and the expansion of subdomains, it is clear that RUANGRUPA is very aware of the importance of having an online presence and have put much effort into using the internet for their advantage.

RUANGRUPA is aware of the challenges in maintaining a balance between serving civil society and the visual arts community. RUANGRUPA considers it important to keep groups a part of RUANGRUPA's organisational value and identity, and thus have tried to keep the development of artworks grounded to the surrounding context. For example, the OK.Video festival in 2011 attempted to bridge the gap

[88] Arts Collaboratory, "A Joburger in Jakarta: notes on RUANGRUPA and the Art of the Network". Available from http://old.artscollaboratory.org/projects/joburger-jakarta-notes-RUANGRUPA-and-art-network (accessed 18 December 2014)

between video art development and its relevance with the social-political environment by inviting two resource persons from international film festivals representing each mainstream (Germany Obbenhauser Short Film Festival and Toronto Film Festival) to a workshop[89]. Other themes covered by RUANGRUPA which have relevance beyond contemporary art included urban issues, local identity, the public role of art, post-colonialism, creative industry and work opportunities, and technology.

RUANGRUPA has been aware of the importance of sustainability or contemporary arts organisations. RURU Corps is RUANGRUPA's response to the commercialization of visual arts and the need to develop a network amongst arts groups that have the capability of being more financial independent. Similarly, Rurushop and Rururadio are initiatives that seek to benefit from the phenomenon of "artist merchandising" in such a way as to derive financial benefits for RUANGRUPA and the artists it supports without concede creativity or art space.

[89] Indonesian Visual Art Archive, "Menghadirkan Daging di Hadapan Pemirsa". Available from 18 December 2014)

# Appendix 3 List of RUANGRUPA Showcases from 2009-2014

**2009**

- RUANGRUPA presentation, Utrecht Manifest Biennial for Social Design: The Grand Domestic Revolution, Beyond The Dutch, Casco – office for art, design & theory, (Utrecht, The Netherlands).
- Conference, On Globalism, MuseumMOderner Kunst / MUMOK, (Vienna, Austria).
- OK.Video – 4th Jakarta International Video Festival, (Jakarta, Indonesia).

**2010 - 2011**

- Exhibition, Singapore Night Festival, Singapore Art Museum, (Singapore).
- A RUANGRUPA collaborative traveling exhibition series: Hanya Memberi Tak Harap Kembali, held in three cities: Bandung (Soemardja Gallery), Yogyakarta (Kedai Kebun Forum) & Jakarta (National Gallery of Indonesia).
- RUANGRUPA 10th Anniversary, DECOMPRESSION#10 – Expanding The Space and Public, exhibitions, public art projects, workshops, film screening, seminars, bazaar, music festival and launch of RUANGRUPA publications, (Jakarta, Bandung & Yogyakarta, Indonesia).
- Art project, 4th Jakarta 32°C, exhibition, workshop, public art project and discussion program for Jakarta students, (Jakarta, Indonesia).

**2011**

- Exhibition, "The Singapore Fiction", OPEN HOUSE - Singapore Biennale, National Museum of Singapore (Singapore)
- Exhibition, "Mini OK.Video Festival", LAUNCHING MARKER - Art Dubai (Dubai)
- Exhibition, DYSFASHIONAL, National Gallery of Indonesia (Jakarta, Indonesia)
- OK.Video – 5th Jakarta International Video Festival (Jakarta, Indonesia)
- International Conferences, AAF Global Network Project, "Pioneer the Future with the Power of Culture – Spirit of Tohoku, Voices Of Asia", Asahi Art Festival (Hachinohe - Tokyo, Japan)
- Exhibition, BEASTLY, Cemeti Art House (Yogyakarta, Indonesia)
- Symposium, Asian Arts Mobility, Asian Arts Space Network Meeting, Kunsthalle Gwangju, (Korea)
- Exhibition, City Net Asia 2011, Seoul Museum of Art (SeMA)
- Exhibition, Institution for The Future, Asia Triennial Manchester, Chinese Arts Centre (Manchester, England)
- Exhibition, BEASTLY, Salihara Gallery (Jakarta, Indonesia)

**2012**

- Exhibition, RURU ZIP: Quote Edition, Reclaim doc, National Gallery of Indonesia (Jakarta, Indonesia)
- Exhibition, THE KUDA: The Untold Story of Indonesian Underground Music in the 70s, 2012, Commissioned for The 7th Asia Pacific Triennial of Contemporary Art, Queensland Art Gallery | Gallery of Modern Art, Brisbane, Queensland, Australia
- Exhibition, RUANGRUPA Small Archive, URBAN GALLERY, Busan Biennale, Seoul, South Korea
- Exhibition, The Sweet and Story of Sugar, Project Collaboration between RUANGRUPA and Noorderlicht – The Netherlands, Kuntskring Gallery, Jakarta, Indonesia

**2013**

- Award, Best 10, Visible Award, Cittadellarte – Pistoletto Foundation and Fondazione Zegna, Van Abbe museum, Eindhoven
- Exhibition, Embrio: Pameran Arsipdan Dokumentasi Seni Rupa Indonesia, Ministry of Education and Culture, GaleriNasional Indonesia, Jakarta
- Forum, Turning Target: Forum Manajemen Organisasi Seni Rupa, Cemeti Art House, Yogyakarta

**2014**

- Exhibition, *Arts Collaboratory Showcase,* RURU Gallery, Jakarta
- Exhibition, *The Growing Manual,* Seoul Museum of Art, Seoul, Korea
- Forum, *Mitting: Art and Cultural Network Forum,* URS 21 Chung Shan Creative Hub, Taipei (Organised by Open Contemporary Art Center (OCAC) and the Thai artist duo Jiandyin (Pornpilai Meemalai and Jiradej Meemalai)
- Workshop, *Making Change Project*, Making Change Production Sprint, Bangalore, India (In cooperation with the Centre for Internet and Society and the Tactical Technology Collective in Bangalore, HIVOS in the Netherlands and the Centre for Digital Cultures at the University of Lüneburg in Germany)
- Public art project, *Temporary Territory,* 2014, at Darwin Festival, Australia
- Exhibition, Art Project, *ruru*, 2014, Commissioned work for The 31st Biennale de Sao Paulo, Fundacao Biennale de Sao Paulo, Sao Paulo, Brazil

Report CDI-15-038

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Klaver, D.C., Smidt H., Nugroho, K., Prasetya, K. S., February 2015, *KKI-WARSI end line report; MFS II country evaluations, Civil Society component,* Centre for Development Innovation, Wageningen UR (University & Research centre) and SurveyMETER. Report CDI-15-062. Wageningen.

This report describes the findings of the end line assessment of the Indonesian Organisation KKI-WARSI that is a partner of IUCN-NL.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses KKI-WARSI's efforts towards strengthening Civil Society in Indonesia and it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which KKI-WARSI contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain the organisation's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

# Acknowledgements

SurveyMETER and CDI are thanking the staff and the leaders of all Southern Partner Organisations that participated in collecting information for the evaluation of the contribution of these partner organisations to creating a vibrant civil society in Indonesia. They also thank the Co-Funding Agencies and the Dutch Consortia they are a member of for making background documents available. We hope that this evaluation can support you in better positioning yourself in the Civil Society Arena of Indonesia.

# 1. Introduction

This report presents the civil society end line findings of KKI-WARSI in Indonesia, which is a partner of IUCN under the Dutch Consortium Ecosystem Alliance. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study, WARSI is working under the theme MDG7ab.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or co-funded development interventions implemented by Dutch Co-Funding Agencies (CFA) and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

*Changes in the civil society arena of the SPO*
In the 2012 – 2014 period the two dimensions that saw the most considerable changes are 'level or organisation' and 'perception of impact'.

Generally speaking, WARSI's level of organisation has improved since the baseline: The SPO has expanded its network of NGOs working at community level, as well as with NGOs that engage in lobby and advocacy. Through the Village Forest scheme, it has been able to defend the interests of increasingly more forest people. At the same time, WARSI has considerably expanded its resource base, becoming a well settled NGO.

With regards to perception of impact, an increasing number of villages have obtained their village forests which are being management by community based forest management (CBFM) groups in an effort to prevent the invasion of these forests by mining companies and the agribusiness sector. Although the participatory resource mapping, defining village boundaries and forming CBFM groups improve the capacities of forest people to defend their interests, the impact of these forests on their livelihoods is yet very limited. Meanwhile the CBFM groups have taken the initiative to organise themselves in an umbrella organisation which is still in its embryonic phase. Other NGOs have started to replicate WARSI's success with the CBFM groups in other districts.

With regards to public sector collaboration and policy influencing, WARSI employs a two pronged approach. In the first place it works with existing policies (Government Regulation No.6/2007 and No 3/2008) that established a legal basis for CBFM. In the second place it tries to influence existing policies and practices: 1) together with other EA grantees, which has just recently yielded successful result and 2) by providing technical inputs to district governments (Jambi) and the provincial government (West Sumatra) to set up task forces in support of the creation of CBFM groups and village forests and by mainstreaming the village forest scheme policies into new rules and regulations.

The findings show that WARSI target groups have been more organised and are more capable of defending the interests of marginalised groups. With regards to impact upon the public sector, the findings also confirm that WARSI has influenced the government of West Sumatra Province to mainstream community-based forest management (CBFM) schemes into their forestry policy and practices.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with WARSI, and interviews with external resources persons working in civil society organisations that receive support from WARSI; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

*Contribution analysis*
Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution of the other SPOs. WARSI was amongst those SPOs selected for in-depth process-tracing.

The first outcome that we looked at is "community-based forest management (CBFM) groups in 9 villages have received full endorsement". Such endorsement is important for communities to be able to utilize village-forest areas to improve and sustain their livelihood via community logging, agroforestry, and ecotourism. While sustainable livelihoods for forest-edge dwellers are believed to be a solution for deforestation, the endorsement also defends the community (and the forest) from long-term issues such as tenure conflicts. The pathway most likely to explain this outcome is improved political will of the government along with WARSI's efforts to support the communities through intensive accompaniment. The contribution of the SPO toward achieving this outcome is in building the capacity of community organisations, and supporting them to navigate their proposals for community forest schemes through complicated bureaucratic terrain.

The second outcome that we looked at is "community-based forest management (CBFM) is mainstreamed into West Sumatra Province's forestry policy". This outcome is very important to be validated since by mainstreaming CBFM, the government offers opportunities for CBFM scheme application on a massive scale. As can be inferred from the first outcome, scaled-up CBFM scheme implementation implies that more communities will be engaged to protect, as well as to benefit from, the forest. This outcome has been achieved as a result of WARSI's lobby and advocacy, which were supported by MFS-II and REDD+.

*Relevance*
Interviews with staff of WARSI, with external resource persons, with the liaison officer of IUCN, as well as contextual information helped to assess the relevance of WARSI's interventions in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which WARSI is operating; the CS policies of IUCN.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because their combined benefit is c*onserved forest and welfare for communities*, which is the ToC's ultimate goal. Some of WARSI's ToC preconditions such as *campaign on community-based forest management*, *increased value of non-timber forest products (NTFP) and ecosystem-based economy*, and major assumption such as p*olitical will from the Ministry of Forestry* and *political momentum* are well reflected from the outcome's contribution analysis.

With regards to the context in which WARSI is operating, its interventions and outcomes achieved are relevant because WARSI has developed its interventions on the opportunities that present itself in the existing policy environment, political will and international pressure and support.

With regards to the CS policies of IUCN, WARSI's collaboration with the other EA grantees is relevant as a strategy to lobby the government to simplify the procedures for the implementation of the village forest scheme. In addition to the joint advocacy success, WARSI's own project is relevant because it is in line with the EA's objective to halt the expansion of extractive industries and agribusinesses, but limited evidence was found confirming that CBFM increases livelihood assets and that households use sustainable land and resource practices to protect the Hutan Desa they manage.

*Explaining factors*
The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within WARSI, the external context in which it operates and the relations between WARSI and IUCN.

WARSI has demonstrated that it is a mature organisation which is capable to achieve development outcomes due to its technical, managerial, administrative and financial capacities. One smaller issue that requires further attention is to prevent reporting one same result to different donors.

The external context in which WARSI operates, in particular the state's acknowledgement of forest communities' rights and the existing regulation to ensure CBFM is conducive. WARSI has used this context to bring further the agenda at all administrative levels.

The relations between IUCN-NL and WARSI are healthy and WARSI has been encouraged to partner with other Ecosystem grantees to lobby for land tenure rights. These efforts started in 2013 and have been successful in simplifying procedures at district and provincial level, as well as simplifying CBFM work plan formats, and ensuring community facilitation.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the governance issues WARSI is working on. Chapter 3 provides background information on WARSI, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with IUCN. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in Appendix 2 of the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in Chapter 4. The answers to each of the evaluation questions are being presented in Chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in Chapter 6. Conclusions are presented in Chapter 7.

# 2. Context

## 2.1 Political context

### 2.1.1 Brief historical perspective

Indonesia's rise to being the world's third largest democratic nation has been lauded by many world leaders. The county is often considered to be a model Muslim democracy. As the fourth most populous nation with an estimated 250 million people[1], Indonesia has sustained its democratic commitment since transitioning from an authoritarian leadership to a democracy in 1998. The decentralized administration now consists of 34 provinces and 508 districts and municipalities.

Prior to 1998, Indonesia was under strict authoritarian regime. Suharto, known for his so-called New Order (1966-1998) regime, ushered in radical transformations that would place social and political forces under direct state supervision. The defining characteristics of the Suharto era were a focus on economic growth and controlled consensus and political stability devoid of dissent. A series of tumultuous economic and political transitions in the nineties severely diminished the credibility of ageing President Suharto, who was forced to resign amidst mass street protests.

His departure in 1998 laid bare three decades of social inequalities, state-perpetuated abuses against human rights, and a lack of civilian liberties. The regime change opened the way for a period of *Reformasi* started under the Presidency of B. J. Habibie (1998-1999) and continued by Abdurrahman Wahid (1999–2001), Megawati Soekarnoputri (2001–2004), and Susilo Bambang Yudhoyono (2004–2014). Restrictions on citizen participation, press freedom and association were removed. Democratic reforms and decentralization led to direct elections, portioned authority, devolution of authority to regional authorities, formation of new political parties and ended the military's parliamentary influence. The distinct historical periods of the New Order Regime and *Reformasi* (1998-present) have shaped the emergence of civil society. Defining characteristics are summarized in the table below.

Table 1
*Characteristics that have defined the emergence of civil society in Indonesia*

| Characteristics | New Order, authoritarian period (1966 – 1998) | Reformasi (1998 – present) |
|---|---|---|
| **Political system** | Centralized, authoritarian characterized by unipolarity. Golkar as the dominant political party.<br><br>In 1999, there were 27 provinces, 306 districts and around 60,000 villages. | Decentralized, democratic. Fragmentation of power and atomization of patronage relationships. Emergence of numerous political parties. Direct presidential elections since 1999.<br><br>Decentralization altered the political and administrative landscape: 34 provinces, 410 districts, 98 municipalities, 6,944 sub-districts and 81,253.[2] |
| **State-citizen interaction** | Benevolent leader, obedient population. Down to the village level, the state permeated society. | Modern political culture marked by diminishing hierarchy between the state and citizens, allowing for citizens to interact more freely. |
| **Citizen representation and voice** | Strict control of speech, expression and association.<br><br>CSOs and their networks largely "hiding behind the screen", and operating under state surveillance. A period of growth occurred in 1995-98, as resistance was building. | Burgeoning of CSOs, pressure groups and NGOs following the political euphoria after Suharto's fall.<br><br>Indonesian CSOs began to establish new networks internationally. Up until the early 2000s the focus was on state-centrist issues. Later, issues that CSOs were tackling became |

[1] In 2010 the population was estimated to be around 237 million people (BPS 2010 Population Census). The current figure is an estimate from BKKBN and similar figures are cited in the CIA's World Fact Book and the World Bank.

[2] Rumah Pemilu, "Gambaran Singkat Pemilihan Umum 2014 di Indonesia", 3 July 2014. Available from http://www.rumahpemilu.org/in/read/3351/Gambaran-Singkat-Pemilihan-Umum-2014-di-Indonesia (accessed 25 October 2014)

| | | |
|---|---|---|
| | | more diverse, ranging from pluralism, poverty reduction to fulfilment of economic, social and cultural rights. |
| **Media** | No free press, censorship and state-control. Suharto had firm grasp over how to use print & broadcast medias to promote political ideologies. | More vibrant media environment, flourishing of media businesses albeit in control of 12 main conglomerates that are mostly profit-driven and often have political ties. |
| | Limited public and CS use and access to internet until mid-90s. | Twitter nation, widespread social media use. |
| | | Growing realization of the importance of media/free press as the fourth pillar of democracy. |
| **Artistic forms of expression** | Art and literary censorship conducted by the state. Art forms were a means to reinforce political order. | Greater freedom of the arts and cultural sectors. Organizations able to hold art events more freely. Freedom of expression a catchphrase amongst individuals and artistic groups, but challenged by more conservative members of society. |
| **Religious expression and organization** | Regime repressed religious groups, especially radical forms. | Emergence of religious groups seeking to restore Islamic values and defend Muslim values. |

With political reforms came greater freedom and space for civic engagement. In the *Reformasi* period, there was a remarkable increase in the number of civil society organizations, many of which were Islamic in character. In 2000, the Central Agency on Statistics (BPS) recorded around 70,000 registered organizations, compared to just 10,000 in 1996.[3] New groups sprung up with donors encouraging activists to establish NGOs they could fund. These organizations were eager to distance themselves from state and often took an anti-government stance. Proliferating CSOs and NGOs have taken advantage of decentralization and greater regional autonomy to engage in public affairs. Civil society and government relations have improved, although both sides remain sceptical of the others' intentions.

### 2.1.2 Recent trends in the political context

Indonesia is considered to be a story of democratic success, but it still struggles to realize the benefits of sustained and equitable economic growth. In the political context, the main challenges lie in governing such geographically vast and decentralized country, applying principles of good governance and the enormous task of reforming the country's bureaucracy.

Although, Indonesia's 'big bang' decentralization initiated at the turn of the century narrowed the gap between local government and citizens, it has also localized political power struggles. While the devolution of authorities relieved tensions between the central government and the regions, it has also created opportunities for corrupt and rent-seeking practices, at the local level. As indicated by Transparency International's corruption index scores, perceived corruption in Indonesia remains high.

Table 2

*Transparency International's Global Corruption Barometer survey: Indonesia*

| Year | Corruption perceptions Index Score<br>*(0 perceived as highly corrupt and 100 perceived as clean)* | Rank |
|---|---|---|
| 2011 | 30 | 100/182 |
| 2012 | 32 | 118/174 |
| 2013 | 32 | 114/177 |

Source: Transparency International

In 2013, decentralization was taken a step further with the approval of the Village Law, intended to address weak governance arrangements and empower rural communities to participate politically. The new law could also lead to village elites distorting power relations and misusing government funding if not properly monitored.

[3] Wahid, Marzuki. 2010. LSM, Islam, dan Perempuan di Indonesia Paska Orde Baru. Presentation at the Asian Dialogues: Open Seminars in Asian Languages. Melbourne, 22 April. Available from http://intranet.law.unimelb.edu.au/staff/events/files/Microsoft%20PowerPoint%20-%20LSM%20dan%20Islam%20di%20Indonesia%20--Melbourne%202010-FINAL.pdf (accessed 25 October 2014)

Indonesia is still transitioning politically and many challenges lie ahead. According to the 2012 Indonesia Governance Index's Executive Report, "Indonesia is witnessing a paradox in its democracy. On one hand, a successful opening-up of civil liberty has led to the avalanche of democratic demands across the nation, however on the other hand, democratic institutions' are inadequately respond to those demands." Nonetheless, the Indonesian Governance Index, which focuses on measuring provincial governance, does show a general improvement in the performance of the government (political office) bureaucracy, civil society and economic society based on principles of participation, transparency, fairness, accountability, efficiency, and effectiveness between 2008 and 2012. Civil society scores improved the most significantly, while scores for bureaucracy rose slightly.[4]

Table 3

*Indonesia Governance Index: Average provincial scores*

| Arena | 2008 | 2012 |
|---|---|---|
| Government | 4.93 | 5.46 |
| Bureaucracy | 5.53 | 5.58 |
| Civil Society | 4.85 | 6.33 |
| Economic Society | 4.77 | 5.71 |

Source: http://www.kemitraan.or.id/igi

In the past decade, Indonesians have generally enjoyed a freedom to participate in the political process through a direct-election mechanism. However, in September 2014 lawmakers voted in favour of a bill reviving indirect elections of regional heads. The controversial vote provoked public outcry which saw peaceful protests and the public voicing their discontent through social media. In early October, just before the end of his term, president Yudhoyono issued a regulation in lieu of the law, effectively repealing the law until further judicial review.

The recent 2014 elections which marked the end of Yudhoyono's 10-year term, demonstrated that Indonesian voters are increasingly voting for popular figures irrespective of political party alliances. While practices of corruption, vote-buying and poor voter administration remained in the recent election, the public seems to have matured politically, indicated by the enormous interest in televised debates between the leading candidates. The appeal of the newly sworn in President Joko Widodo, popularly known as Jokowi, has come from his hands-on, man-of-the-people approach. As Jokowi begins his five-year term he will need to start addressing a myriad of challenges that include corruption, stagnant economic growth, and human rights concerns, particularly with respect to the rights to freedom of expression, peaceful assembly, and religious intolerance. If left unaddressed, these challenges could seriously undermine Indonesia's stability and democratic reforms.

## 2.2 Civil Society context issues with regards to the MDG

Several important changes took place during the 2011 and 2014 period. First, the global financial crisis and Indonesia's rise to a middle-income country led to a decrease in international donor funding. Development actors, including CSOs and NGOs, have to compete harder for funding. Some have been more successful than others in diversifying funding by turning to the private sector or private foundations. At the expense of past idealism, local NGOs are now more disposed to receiving funding sources which in the past may have been criticized as supporting neoliberalism.

Regulatory changes also affected the civil society arena positively and negatively. Amongst the more controversial laws to spark reaction was Law No. 17/2013 on Societal Organisations. In an open letter sent before the bill was enacted, CIVICUS said the law would undermine freedom of association and "prevent CSOs from working on sensitive topics related to good governance and democratic reform in the public interest".[5] FORUM-ASIA deplored the repressive provisions in the law that "leave all groups

[4] The IGI uses a scale of 1 (lowest) to 10 (highest). Data is available online through their website. Indonesia Governance Index, Data, "IGI Executive Report". Available from http://www.kemitraan.or.id/igi/index.php/data/publication/factsheet/275-igi-executive-report (accessed 25 October 2014)

vulnerable to attacks, undermining the hard-won democratic space that has been forged by civil society since the end of the New Order regime."[6]

Other laws passed that provoked criticism were the State Intelligence Law (October 2011) and the Social Conflict Law (April 2012). NGOs and media see these laws as imposing further restrictions on freedom of speech, potentially leading to the criminalization of human rights defenders and signifying a tightening of state control. Discriminatory content was also an issue in discussions on the Religious Harmony Bill in 2013, for which drafting was initiated in despite not being part of the planned National Legislative Program. Late in 2013, the House of Representatives came under fire again for its weak stance against religious intolerance when it re-endorsed a law that limits state-recognized religions to six.

Land rights and natural resource protection have been a long-standing issue for Indonesia. While Indonesia has adopted and amended laws to improve the rights of smallholders and indigenous communities, many of these regulations have faltered in their implementation. Part of the issue lies in the overlap and lack of clarity of laws adopted that regulate different sectors and local legislation. Another issue is that there is a lack of oversight in the procedures such as granting permits and licensing. These problems, which are commonly found across development sectors, are compounded by a lack of information among local communities on what the laws regulate and their rights vis-à-vis them.

Since 1999, local governments in Indonesia have been granted more policy and decision-making space. In the same year, the Ministry of Forestry recognized under Law No. 44 the rights of customary institutions in forest management. However these rights are limited to resource management rather than ownership since the government retains tenure rights. Subsequent regulations recognized the responsibilities of local communities and governments in natural resource management. In 2007 and 2008 a legal basis for CBFM was created, in part to offer a solution to conflicts between communities and concession companies.[7] In 2013, the Constitutional Court also accepted a Judicial Review of the Forestry Law No. 41/1999 recognizing that customary forests are not state forests and that indigenous peoples have legal rights. This is a landmark ruling and an important step for the recognition of indigenous people's rights. Village forest designation (*Hutan Desa*) has been seen as a promising solution that can bring welfare to communities and prevent further deforestation.

Other positive context factors consists of the prolongation of the 2011 moratorium on new concessions for primary forests and peat lands with another two years and the signature of a Memorandum of Agreement between 12 ministries and state agencies to collaborate on creating one resource map and to accelerate the determination of forest status, prevent corruption and resolve forest conflicts[8].

The forestry sector in Indonesia has been criticized for its mismanagement and high levels of corruption in recent years. The country's Corruption Eradication Commission (KPK) conducted a forest sector review in 2010 that identified many weaknesses and loopholes in regulations, institutions and operations. Data from Indonesian Corruption Watch (2011) showed that there is a correlation between the quantity of concession licences and elections of district/province heads. A Human Rights Watch Report in 2013 stated that "financial costs of poor governance in the forestry sector are enormous."[9] Given the government's own prioritization of anti-corruption efforts and in light of the significant investment of foreign funding into Indonesia's REDD+ program that underscored the importance of more open and transparent practices, the government has been more open to improving forest governance.

# 3. KKI-WARSI and its contribution to civil society/policy changes

## 3.1 Background KKI-WARSI

WARSI, officially established in January 1993[10] by an alliance of 20 Sumatra-based organisations, currently forms a network organisation of twelve regional NGOs based in four provinces: South Sumatra, West Sumatra, Bengkulu and Jambi. WARSI was formed with the vision of supporting sustainable development, defined as development that fulfils the needs and guarantees the welfare of people in the present, without endangering the continued survival of future generations[11]. In 2003, the organisation amended its name, adding 'Indonesian Conservation Community' to become KKI – WARSI. Since then, WARSI's efforts have focused on biodiversity/natural conservation and community development. The mission of WARSI is to uphold conservation principles of indigenous communities and encourage the development of a model for conservation area management in Sumatra. As such, WARSI has developed a concept termed 'conservation with community'.[12] WARSI's motto, "conservation for community prosperity" does not discard community prosperity for the sake of conservation.[13]

This concept is meant to provide solutions in the current context where a "concession regime" reigns. Indigenous communities living in forest areas lack the authority to stop destructive practices, such as illegal logging, clearing fields in the forest, hunting, and the opening of forest areas for mining by outsiders. Under this so-called regime, the government owns the forest and can legally give concessions to private sector companies for mining, plantation and other extractive activities. As a consequence to this arrangement, there are frequent conflicts between concession licence-holders and communities, which have even led to allegations of human rights violations. Operating in these conditions, WARSI's goals are two-fold: preserving the forest and defending the rights of forest communities to fulfil their needs without endangering the survival of future generations.
To reach its aims, WARSI has developed several intervention strategies that include:

1. Becoming a clearing house for issues dealing with natural conservation and community development;
2. Developing communication and cooperation, whilst mediating between local, national and international stakeholders;
3. Establishing forums and opportunities for education and training, research and other activities;
4. Communicating the importance of conservation and community development in Sumatra;
5. Carrying out conservation actions in the field using participatory methods.[14]

## 3.2 MFS II interventions related to Civil Society

KKI-WARSI's interventions relate to civil society with respect to securing forest resource management rights for communities, which include greater decision-making power over access, better distribution of benefits and governance aspects. According to WARSI, communities or indigenous groups living in forest areas (like the Orang Rimba in Jambi) are disadvantaged groups. Their rights go unrecognized and the government would prefer to see forest areas to be free of communities or people. WARSI works to facilitate a recognition for community governance of forest areas through the *Hutan Desa*

[14] Ibid

scheme (Village Forest scheme). Communities have local wisdom in forest management and can sustainably manage forest areas if their rights are recognized. Once communities obtain rights to manage forest areas, they can benefit from agroforestry, community logging, income from non-timber forest products (NTFPs) and ecotourism. This in turn protects forests against ongoing conversion to plantation or mining areas.

WARSI's organizational goal is concerned with conservation, based on principles of people's empowerment and participation. WARSI could be considered to be 'custodial' in orientation since they seek to safeguard community control of land (forest areas) and forest resources through the village forest scheme. Within the scheme, WARSI's strategy can be divided into two main approaches:

- building the capacity of 'forest managing groups' (which can be considered intermediary organizations)
- facilitating lobby and advocacy initiatives to support communities in their efforts to secure forest management rights

KKI-WARSI's role is to guarantee that the government does not issue conversion licenses to private initiatives, and to obtain recognition of the *Hutan Desa* to secure sustainable and local forest management.

The above interventions are most relevant to the CIVICUS dimensions of 'level of organisation' and 'perception of impact'. WARSI assists communities in guaranteeing a better acknowledgement of their rights to forest resources, while working to influence the public sector (local government) for an endorsement of these rights. WARSI has been successful in West Sumatra and Jambi in promoting and replicating CBFM schemes.

## 3.3 Basic information

Table 4
*Basic information KKI-WARSI*

| | | Details |
|---|---|---|
| Name of SPO | : | KKI-WARSI |
| Consortium | : | Ecosystem Alliance |
| CFA | : | IUCN |
| Start date of cooperation | : | 1 October 2010 |

[15] Costs that relate to civil society development or policy influence are those costs that possibly contribute to the development of the CIVICUS dimensions, excluding coordination and office costs; staff costs and financial reserves.

# 4. Data collection and analytical approach

## 4.1 Adjustments made in the methodology of the evaluation

The evaluation team followed the operational guidelines to a great extent, but was unable to have a workshop with all of WARSI sub-groups as only the executive and program managers attended the workshop. In practice the workshop lasted five hours, without the full participation of the executive. In order to get board's perspective, a separate interview was scheduled with one of WARSI's board members. However, given the available time, the interview focused on confirming the model of change instead of discussing changes in each CS dimensions.

The evaluation team was unable to get averages or scores for each subgroup as participation was not consistent and other difficulties which made the workshop less effective. The in-country team assigned the scores and then ran them past WARSI to confirm the scores.

Another obstacle was the lack of participant preparation for the workshop. Not all participants had fully read or understood relevant documents (baseline report, CS dimensions change) shared with them prior to the workshop. All of the participants found it difficult to respond to the CS dimensions of change questions, partly due to confusion over whether or not the evaluation's scope was focused on IUCN programs or more general for organisational/institutional changes. WARSI's overlapping projects (as a finding of this evaluation), added difficulties in defining the evaluation scope since the CBFM interventions also received non-IUCN donor funding. While WARSI initially claimed that donor funds were segregated by geographic areas, later other evidence emerged to suggest that this was not always the case. Fortunately, much of the information obtained through the workshop and subsequent interviews could be triangulated with evidence found in documents and online research.

## 4.2 Difficulties encountered during data collection

During data collection the team experienced the following difficulties:

- Workshop participants did not really understand, nor were they familiar with the CS indicators or the CIVICUS framework. They found it difficult to relate WARSI's situation with the indicators, especially since only half of them participated in the baseline process. This lessened the effectiveness of the workshop.
- WARSI does not have a dedicated monitoring and evaluation team. Rather, a new research and development division has been formed nine months ago. This division is supposed to take on the role of external reporting. As such, it added difficulties to find hard data and affected the agreement on the outcomes.
- WARSI was not completely prepared for this evaluation.
- WARSI provided several references of potential external resource persons. However, the evaluation team was unable to arrange meetings with them within the available fieldwork time. As a consequence, some interviews had to be conducted via telephone. Moreover, not all of evaluation team's attempts for telephone interviews received positive response.

## 4.3 Identification of two outcomes for in-depth process tracing

The first outcome (Community-based forest management groups in 9 villages have received full endorsement) was selected with the following considerations:

- It was one of several outcomes that all workshop participants agreed to as being a significant achievement.
- It is one of the elements in WARSI's Theory of Change (ToC), and the resulting model of change also addresses the ToC's main assumptions. The baseline report suggested this outcome to be selected, to test WARSI's ToC elements and assumptions.
- The input-output-outcome analysis also provided similar directions for in-depth process-tracing.
- As one of the outcomes from WARSI's proposal to IUCN, the evaluation team expected fewer difficulties to find supporting evidence.

The second outcome (CBFM is mainstreamed into West Sumatra Province's forestry policy) was selected because:

- It was one of several outcomes that all workshop participants agreed to as being a significant achievement.
- It is one of the elements in WARSI's ToC, and the resulting model of change also addressed one of the ToC's main assumptions (government political will). The baseline report suggested this outcome to be selected, to test WARSI's ToC elements and assumptions.
- The input-output-outcome analysis also provided similar directions for in-depth process-tracing.
- As one of the outcomes from WARSI's proposal to IUCN, the evaluation team expected fewer difficulties to find supporting evidence.
- The second outcome is related to the first outcome. The second outcome achievement offers opportunities to leverage the first outcome through replication to a wider scale beyond WARSI's outreach.

Based upon an analysis of the projects and programmes financed by the Dutch CFAs, four strategic orientations for civil society were identified. Two of which were selected for each SPO for in-depth process tracing. CDI suggested to the country team to look at the selected strategic orientations. For WARSI, both outcomes matched with civil society orientations in: ensuring that the organisations that receive support from the SPO (intermediary organisations) are capable of playing their role in civil society; and; influencing policies and practices of public or private sector organisations.

WARSI, together with other EA grantees started a joint advocacy process in 2013 to simplify the procedures for Hutan Desa permits and the authority to manage these by CBFM groups. Both the documents made available for input-output analysis and the discussions with the WARSI team did not highlight these efforts as a potential outcome to look at, although this would match with EA's programmatic approach to strengthen civil society.

# 5. Results

## 5.1 Results obtained in relation to intervention logic

This paragraph makes an inventory of results and objectives achieved versus planned according to the documents made available to the evaluation team.

Table 5

*Overview of results achieved in relation to project plan WARSI*

| Result Level | Description | Level of achievement |
|---|---|---|
| Project 1: Increasing Community Welfare through Participative Forest Management at Batanghari Basin: October 2010-2014 | | |
| Objective 1 | Communities are organised for village-based forest management | Achieved: 16 communities (from targeted 13) organized for village-based forest management. Another 3 in the process of obtaining designations from the Ministry of Forestry, which will bring the number to 19 villages. |
| Result 1.1 | Established a strong institution at the community level manage the village forests<br><br>Indicator:<br>Capacities to defend community rights enhanced of 10 villages | Achieved: 16 communities have designed participatory village-forest management plans. |
| Objective 2 | System of sustainable natural resource use is established | Partially achieved: Activities conducted include participatory survey, training to introduce multi-tier commodity/agro forestry, assessment of market and social potentials in the villages. The results of this have been documented in the forest management plans, which are to be approved by the governor. |
| Result 2.1 | Improved skills on management forest products and community incomes increased by opening access to use natural resource (activities under Obj. 3 also contribute to this result) | Partially achieved: 20 model households reported additional income of IDR 400-500,000 per month |
| Objective 3 | Government recognition for village-based forest management | Partially achieved[16]:<br>WARSI facilitated the recognition of 16 villages from the MoF. CBFM permits (full endorsement) were granted for 9 villages. Remaining 7 villages are in the process of obtaining village forest management rights from the governor. |
| Result 3.1 | Government support at the district, provincial and central levels to the management of village forest | Achieved: 2 district CBFM task-forces established in Jambi province, and 1 provincial CBFM task-force for West Sumatra. |
| Objective 4 | Villages have their own electricity generation | Partially achieved: electricity generator benefits limited number of households in SenamatUlu village |
| Result 4.1 | Developed hydroelectric power as a simple and cheap alternative energy source<br><br>Indicators: # of households that benefit from improvements in livelihoods assets<br><br># of communities that are voicing their rights in policy and planning discussions | 48 households were provided with electricity. Bungo district government agreed to support micro hydro generator for Senamat Ulu village, estimated to serve 110 households. |
| Objective 5 | Model study area developed for climate change mitigation and adaptation | No evidence |
| Result 5.1 | Developed a model study area of mitigation and | No evidence: Nothing about a specific 'study |

[16] The logical framework does not specify the level of government recognition. Full endorsement of the village forest at all levels will ensure promised benefits for the community level.

| | | |
|---|---|---|
| | adaptation to climate change<br><br>Indicators:<br># of CSOs that are trained in ecosystem-based climate change adaptation and mitigation<br><br>Area of land used by communities under ecosystem-based climate change adaptation plans | area' reported |
| Objective 6 | Project activities of other EA-partners Sumatra are coordinated | No evidence: seems to have been move into Project 2 (land-tenure) |
| Result 6.1 | Coordination to IUCN's partners in Sumatra | No evidence: seems to have been move into Project 2 (land-tenure) |
| Project 2: Advocacy on Rules of licensing procedures of Village Forest and Community Forestry at Central Government (land-tenure program: January 2013 – June 2015 | | |
| Objective 1 | The License procedure of HutanDesa (Forestry Minister Regulation on HutanDesa) can be shortened and simplified at the provincial and national levels | Achieved: Joint lobby resulted in simplified procedures. Two regulations issued for this by MoF: PeraturanMenteriKehutanan No. 89/Menhut-II/2014 and PeraturanMenteriKehutanan No. 88/Menhut-II/2014 |
| Result 1.1 | License Procedure for HutanDesa and Community Forestry is revised to be more simple and shortened from 27 steps to 15 steps at Forestry Department of Indonesian Republic | Achieved: Series of meetings with other EA grantees resulted in a position paper regarding procedure streamlining. The position paper has been submitted to MoF. Three of four advocacy inputs have been accommodated via the new regulations. |
| Objective 2 | Review and analyse the need for facilitation support management institution of HutanDesa and HutanKemasyarakatan for the preparations of the work plan and its implementation in the community can be collected | Achieved: studies on established CBFM groups conducted |
| Result 2.1 | Document review and analyse of the need for facilitation support management institution of HutanDesa and HutanKemasyarakatan can be arranged. | Achieved: Study carried out by a team formed by EA grantees at Riau, Jambi, West Sumatera, South Sumatera, Lampung, and Java provinces. |
| Objective 3 | Financial support from National Development Budget is available for facilitation of Community Based-Forest Management at the provincial and district levels. | No evidence |
| Result 3.1 | Communities from various regions that got the license from the Forestry Minister get financial facilitation from the General Service Agency of the Forestry Ministry | No evidence |
| Result Level | Description | Level of achievement |

While WARSI seems to be successful in facilitating lobby and advocacy initiatives, they were only partially successful in building the capacity of forest management groups. Nine new forest management groups were established out of a targeted 16. Objectives 2 and 4, which focus on community welfare, are critical for sustainable CBFM and for successful application of concessional rights. It has to be noted that reports tended to be activity-oriented rather than reporting at the output and outcome levels.

Regarding the second project, the desired results have not yet been achieved partly because the project will be completed in 2015. Objective 3 is only attainable if Objectives 1 and 2 are achieved first. There seems to be an assumption that policy reforms will have an immediate effect, which is unlikely given the changes in the country's administration and the regular bureaucracy involved in socializing new procedures.

## 5.2 Changes in civil society in the 2012-2014 period

### 5.2.1 Civic engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

Since the baseline assessment, WARSI has managed to engage more communities into its community forest management programme through the establishment of community based forest management groups (CBFM). In the same period, the representatives of two of these groups have joined the WARSI network. WARSI's position as a politically impartial organisation is being questioned since WARSI plans to support its members in campaigning in district elections. However, it can also be argued that involvement in local politics is a democratic right, which is acceptable so long as there are no conflicts of interest. It can be considered a strategy to promote the mission and vision of the organisation, especially in Indonesian where politics have in the past been dominated by business people and elite families.

In WARSI's interventions, civic engagement was promoted through the establishment of CBFM groups. Forest communities are often marginalized by natural resource extraction and unfavourable government policies. The interventions sought to engage communities in the management of forest resources by giving them more decision-making powers the *Hutan Desa* or village forest scheme. Since the baseline, WARSI has supported 19 villages, of which 16 were IUCN-funded. By December 2014, nine of these received endorsement and recognition from the Ministry of Forestry and the local government for their rights to manage forest areas for the next 35 years. WARSI's role has been to encourage the formation of CBFM groups and facilitate them in meeting requirements for *Hutan Desa* application (27 steps for endorsement from the Ministry of Forestry). Without such facilitation, communities would unlikely receive recognition for their long-term rights to manage forest resources through permits/concessions from the government.

The evaluation was unable to assess how communities are engaged at the grassroots, community level due time and resource constrains. But there has been some criticism (from a resource person interviewed) that WARSI is drifting away from intense community interaction as it gains recognition for its CBFM interventions. Organizationally, the WARSI network gained two members in 2013 who are CBFM group representatives. This is a positive step, although there is no evidence yet of how this membership may affect the direction and decision-making of the SPO.

**Score baseline 2012 on an absolute scale from 0-3: 3**
**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.2 Level of organization

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

Generally speaking, WARSI's level of organisation has improved since the baseline: The SPO has expanded its network of NGOs working at community level, as well as with NGOs that engage in lobby and advocacy. Through the Village Forest scheme, it has been able to defend the interests of increasingly more forest people. At the same time, WARSI has considerably expanded its resource base, becoming a well settled NGO.

WARSI works to promote community forest rights within the confines of existing forest policies. Through the *Hutan Desa* scheme, WARSI promotes the recognition of community rights vis-à-vis actors seeking to exploit forest resources. The SPO defends the interests of forest communities, which it sees as being in a disadvantaged position. *Hutan Desa* is considered to be a sustainable solution that conserves forests and promotes community welfare. While CBFM is promising, improper implementation could have negative results. The evaluation team cannot conclude whether such negative impacts occurred due to constraints in time and resources. Rather, we draw attention to potential risks if marginalized groups are not defended properly (See Appendix 2). Potential issues include: 1) a lack of follow up to improve livelihoods and create economic alternatives for communities that have received forest management rights; and 2) a lack of representation or inclusiveness of the community within the CBFM group.

Nevertheless, WARSI is still highly regarded for its sustainable forest management work and its lobby strengths. This has helped it attract diverse external donor support. There is substantial international interest in forestry and REDD+ issues in Indonesia. Within this context, WARSI has received funds from a range of donors including the Norwegian Rainforest Foundation, USAID and others.

As a network organisation with a strong basis in Sumatra, WARSI has good relations with other NGOs working in the same geographic area or on CBFM issues. These organisations include WALHI, Telapak, SSS-Pundi, Gita Buana, and PKBI amongst others. While there are no formal arrangements for collaboration with these NGOs, cooperation is considered mutually beneficial since each organisation contributes according to their capacity and expertise to community empowerment. Interestingly, many of individuals active in one organisation also hold other positions in another. This means that while the network of organisations is extensive, many of the people that are engaged are the same individuals.

WARSI is also engaged in thematic and advocacy networks. In particular with the other EA grantees, , they are involved in a joint advocacy group led by NTFP-EP for Mainstreaming Sustainable Livelihood Initiatives and Models (SLIMs) and WARSI is taking the lead to simplify the license procedures with regards to CBFM at the provincial and national level. According to EA, bringing together EA partners who were previously not willing or able to work together or did not even know of the other's existence are now cooperating. In so doing, they are learning about their own relative strengths and how they can complement each other; both in terms of assets (as knowledge, skills and networks) as well as in their roles. This enables a more effective organisation of advocacy with one partner using the carrot and the other the stick and together achieving more impact[17].

With regards to CBFM group endorsement or *Hutan Desa* interventions, WARSI generally coordinates with other organisations to ensure no overlaps occur. But there are some cases where more than one organisation supports the same village. Recognition of community-based forest management rights has been received enthusiastically by other CSOs and NGOs, which in turn has generated more support from their side. Regular meetings are also held with CBFM groups to report progress and share lessons. This also helps the groups exchange ideas and skills amongst themselves.

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision-making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

Since the baseline, WARSI, as a member-based organisation, has broadened its membership base with 18 new members from community groups, customary leaders and community leaders. This has been a deliberate intervention undertaken to maintain relations with community groups that have received support in the past. These members have voting powers in the general assembly and can influence strategies of WARSI. Whether or not community representatives will have a say is not yet measurable, and will have to wait for the next general assembly planned in 2016.

During the 2013 general assembly, which takes place every three years, apart from expanding its membership, WARSI appointed a new director. Structural adjustments have also taken place, namely the setting up of a Research and Development division, headed by the former director.

The evaluation found that there are still weaknesses with regards to monitoring and evaluation. WARSI has no dedicated division for this and no external evaluations have taken to assess programme results holistically. Similarly, financial audits have been project-based, undertaken to comply with donor requirements. With no institutional audit, it is difficult to discern with certainty which donors contributed to what results although WARSI claims that donor support is segregated by geographic area.

As during the baseline, WARSI's board and executive arm meets on a regular basis to discuss progress and performance. The board structure does not contain representatives of WARSI's target groups. Women are well represented in on the monitoring and advisory boards, fulfilling an internal requirement of a minimum 30 percent female representation. This is no change since the baseline.

[17] Interview with Evelien van den Broek, IUCN, 2014

**Score baseline 2012 on an absolute scale from 0-3: 2**
**Score end line 2014, relative change on a scale of (-2, +2): 1**

### 5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perceptions of both civil society actors (internal) as well as actors outside civil society are taken into account. Specific sub-dimensions for this evaluation are the extent to which the SPO has contributed to engaging more people in social or political activities, strengthening CSOs and their networks, and has influenced public and private sector policies.

*Impact upon civil society*
Since the baseline 16 new community-based forest management (CBFM) groups have been created in the provinces of Jambi and West Sumatra. Until so far 10 of the 20 villages supported have received the state recognition and authority necessary to use the village forest are for production activities for the next 35 years. Nine of these are IUCN supported. Many actors see this official recognition as the most appropriate political instrument to defend the interests of minority forest groups and of local communities' vis-à-vis forest concessions controlled by private sector organisations. The communities only have a two-year period to acquire village forest permits. If no permit is granted within that period, the village forest designation will be withdrawn. Until so far in Jambi Province one CBFM group has been successful in preventing a company to obtain a concession and three villages rejected plans of their local governments to designate forest land into an industrial forest plantation area[18].

The CBFM scheme, and in particular the mapping of forest resources and boundaries is a critical process for granting management rights to the community: setting the boundaries may cause conflicts with neighbouring villages which requires processes of conflict resolution. West Sumatra province decided to mainstream the CBFM scheme in their forest policy as a strategy to solve land disputes in its Nagari forest which is under forest customary law. Although some researchers have commended this strategy to mainstream the CBFM scheme in Provincial Regulations concerning Nagari Forest, the evaluation team did not find evidence that conflict resolution was facilitated by WARSI in the 2012 – 2014 period. WARSI managed to clarify the boundaries between three villages in Jambi province after a conflict had arisen due to the mapping of resources and boundaries.

With regards to the efforts of WARSI to create the CBFM groups, the evaluation team observes that the extent to which community interests are being defended by these groups could be an issue of concern, because respondents state that increasingly the WARSI facilitators communicate with the village elites, rather than with the community itself. Limited communication with elites incurs the risk that CBFM groups may be influenced by elites that are attracted to potential financial returns offered by corporations. However, where CBFM groups are democratically elected, this will help overcome the challenge of building grassroots organisations to perform without falling into the hands of elites. In Bantanghari District for example, some elites were persuaded by a company to conserve the forest for timber, which was not agreed upon by members of the CBFM group. WARSI claims however that village forest management groups have been democratically elected and that interventions require the approval of villagers. The characteristics of the Hutan Desa scheme are limited to usage rights and watershed management, which according to IUCN is less likely to offer financial incentives to exploit the scheme in highland areas.

Until so far there is limited evidence that the communities that have their own village forest are improving their livelihoods. By the end of 2014, some 110 households benefitted from a hydro power generator with a capacity of 27,000 Watt. According to WARSI, livelihood incomes increased with some IDR 50,000 per month, whereas the poverty line is IDR 407,437 per month according to BPS standards for 2013[19], with a monthly inflation rate of around 6 percent[20].

[18] According to WARSI data, community forest rights only cover 64,384 hectares compared to 776,652 hectares designated for industrial forest areas
[19] Berita Resmi Statistik BPS Provinsi DKI Jakarta. 2014. *Tingkat Kemiskinan di DKI Jakarta Maret 2014*, p. 1. Available from http://jakarta.bps.go.id/fileupload/brs/2014_07_01_12_50_20.pdf (accessed 21 November 2014)

WARSI staff reported that based on a longitudinal study on 800 households between 2012 and 2013, household income increased an average of IDR 50,000 a month (no further documentation received on this). The valuation team estimates that an increase of just under USD 5 is insignificant compared to the poverty line (IDR 407,437/month according to BPS standards for 201321) and monthly inflation rates of around 6 percent[22].

Meanwhile the CBFM groups are engaging with the government annually to present their work plans and achievements so far and they have started to meet share and learn from each other occasionally. They are about to form and umbrella organisation.

WARSI's success with the CBFM group is being replicated by other organisations and at least 8 districts in West Sumatra Province have asked WARSI to assist them; however the organisation has not yet been able to fulfil all of these requests. The formation of officially recognised CBFM groups is still an extensive process and communities will continue to rely on third-party, external assistance in the technical mapping process, navigating procedures and funding the process.

WARSI continued to work with NGOs in four provinces in Sumatra who all have a shared focus on conservation and community empowerment at community level. Although through its collaboration with NGOs at community level, WARSI seeks complementarity in the interventions that target the same CBFM groups, no evidence has been found that this is the case and information is available that these NGOs conduct similar activities with the same CBFM group. This might explain communities' limited satisfaction with the impacts of the village forests at household level.

WARSI also still works with the same network that lobbies for more land tenure rights for forest people and since 2013 it collaborates with other EA grantees as a lead for joint advocacy efforts on land tenure rights: This collaboration has become more intensive and on their behalf WARSI also engages the working group of the Ministry of Forestry on revisions of the village forest scheme.

*Collaboration with the public sector and policy influence*
WARSI employs a two pronged approach in its relations with the public sector. In the first place it works with existing policies (Government Regulation No.6/2007 and No 3/2008) to operationalise CBFM. In the second place it tries to influence existing policies and practices. Its efforts to do so have intensified since the baseline study in 2012.

With regards to the implementation of existing rules and regulations, WARSI supports CBFM groups to obtain the necessary letters of recommendations written by the district, province and national level, to obtain the necessary permits with the Village-Forest Agency of the Ministry of Forestry. Their most important strategy consists of showing the net benefit of CBFM for both the public sector and local communities at each of these administrative levels (ASB, 2013). This does not always work and also depends upon the government's inclination to side with companies or with forest people.

With regards to influencing policies, WARSI, together with other EA grantees successfully managed to simplify the above mentioned procedures for CBFM since 2013. Two regulations were issued for this simplification: Peraturan Menteri Kehutanan No. 89/Menhut-II/2014 and Peraturan Menteri Kehutanan No. 88/Menhut-II/2014.

In Jambi, WARSI has successfully lobbied two districts to form CBFM task forces in charge of helping village communities apply for CBFM permits. Another district decided to further support a Village Forest Management Plan and has allocated funds from the 2014 annual budget to support the plan (IDR 1.2 billion).

In West Sumatra, WARSI has successfully influenced the provincial government after it decided to become a priority province for the national REDD+ program in May 2012, clearly stipulating that mainstreaming CBFM is their main implementation strategy. Several districts and the province organized the establishment of a Task Force that assists communities in village forest management as a means to accelerate the implementation of forest schemes. The provincial government has made the

[20] Bank Indonesia, Inflasi, "LAPORAN INFLASI (Indeks Harga Konsumen)". Available from http://www.bi.go.id/id/moneter/inflasi/data/Default.aspx (accessed 21 November 2014)
[21] http://jakarta.bps.go.id/fileupload/brs/2014_07_01_12_50_20.pdf, p.1
[22] http://www.bi.go.id/id/moneter/inflasi/data/Default.aspx

Task Force a one-stop service for the expansion of CBFM schemes and developed a five-year road map (2012-2017) for CBFM with a target of 500,000 hectares to be managed by communities. This is a first in Indonesia. This means that in the future, there will likely be more opportunities for community groups to regain control of forest resources.

*Collaboration with the private sector and policy influence*
WARSI stopped collaborating with private sector organisations meant for ecological restoration and marketing of NTFPs. The organisation's successes to 'win the race' against the control of forest areas by mining and agribusiness companies positions it as a competitor for those companies. In Jambi province, WARSI has hypothetically blocked a number of private sector companies from gaining forest and land usage rights in at least 10 villages along the Batanghari watershed. However, technically the opportunity still exists if CBFM groups fail in protecting the village forest or if they become inactive: The area covered by village forests (25 villages covering only 54,978 hectares) is just a tiny fraction compared to the 853,430 hectares of forest land authorized to 18 corporations[23].
Given the fact that in West Sumatra forest management by Nagari is based upon customary rules and traditions, possibilities for companies were very limited and cumbersome until 2011. As of that year the Ministry of Forest issued a decree that converted some protected forest areas into limited production forests including those eligible for a Hutan Desa status. WARSI has until so far successfully protected 9 villages from private sector organisations.

### 5.2.5 Civil Society Context/Coping strategies

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in Chapter 3. In this section we describe how WARSI is coping with that context.

As the first nation to declare its commitment to voluntarily reducing carbon emissions, REDD+ may have changed the face of the Indonesian forestry policy environment. WARSI has been able to capitalize on the increased international pressure and spotlight put on Indonesia to address conservation. Two changes in the context of WARSI to which the organisation reacted positively show its coping strategies:

In the first place WARSI seized the momentum in 2012-2013 to lobby the West Sumatra province to mainstream CBFM in their forest policy, when both a Presidential Instruction on the 2011 forest moratorium cited conflict resolution as a priority for forest boundary conflicts, followed by a similar statement by the Corruption Eradication Committee or KPK also encouraged forest conflict resolution as a priority in 2012.

In the second place, in 2012 WARSI increased its assistance from 2 to 9 villages in Jambi province, when the Ministry of Forestry redefined some protected forest areas as Limited Production Forests that opened opportunities for companies to obtain exploration licences .

## 5.3 To what degree are the changes attributable to the Southern partners?

This paragraph assesses the extent to which some outcomes achieved can be "attributed" to WARSI. Starting with an outcome, the evaluation team developed a model of change that identifies different

[23] WARSI, Press Release 2013, Hutan Desa, "Gubernur Tandatangani 17 Hak Pengelolaan Hutan Desa", 19 August 2013. Available from http://www.warsi.or.id/news/2013/News_201308_Gubernur_Tandatangani_17_Hak_Pengelolaan_Hutan_Desa.php?year=2013&file=News_201308_Gubernur_Tandatangani_17_Hak_Pengelolaan_Hutan_Desa.php&id=249 (accessed 22 November 2014)

pathways that possibly explain the outcome achieved. Data collection was done to obtain evidence that confirms or rejects each of these pathways. Based upon this assessment, the evaluation team concludes about the most plausible explanation of the outcome and the most plausible relation between (parts of) pathways and the outcome. The relations between the pathways and the outcomes can differ in nature as is being explained in table 6.

Table 6

*Nature of the relation between parts in the Model of Change*

| Nature of the relation between parts and other parts or outcome | |
|---|---|
| The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient) |  |
| The part does not explain the outcome at all: other subcomponents explain the outcomes. |  |
| The part explains the outcome but other parts explain the outcome as well: there are multiple pathways (sufficient but not necessary) |  |
| The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient) |  |
| The part is a contributory cause it is part of a 'package' of causal actors and factors that together are sufficient to produce the intended effect. |  |

Sources: Mayne, 2012; Stern et al, 2012

The following paragraph assesses WARSI's contribution to two outcomes. Each paragraph first describes the outcome achieved and the evidence obtained to confirm that the outcome has been achieved. It then presents the pathways identified that possibly explain the outcomes, as well as present information that confirms or refutes these pathways. The last section concludes in the first place about the most plausible explanation of the outcome, followed by a conclusion regarding the role of the SPO in explaining the outcome.

Two outcomes were selected to measure the degree of MFS-II effectiveness. These were:
- Outcome 1: CBFM groups in 9 villages in 3 districts of 2 provinces have received full endorsement.
- Outcome 2: CBFM is mainstreamed into West Sumatra province forestry policy.

### 5.3.1 Outcome 1: CBFM groups in 9 villages in 3 districts of 2 provinces have received full endorsement.

Since the baseline, WARSI has helped 9 CBFM groups to successfully apply for village forest concessions, which have been endorsed by the Ministry of Forestry and the local government. The outcome was mentioned by WARSI during the evaluation workshop and verified by secondary resources and records. The villages that obtained their endorsement were the following:
- In Jambi Province: Senamat Ulu, Laman Panjang, Sungai Telang, and Buat Village in Bungo District, Jelutih, Olak Besar and Hajran Villages in Batanghari District;
- In West Sumatra Province: Jorong Simancuang Nagari Alam Pauh Duo in South Solok Districtand Simanauin Solok District.

There are still another 7 villages awaiting endorsement with the support of IUCN-NL. In addition to the IUCN-supported villages, one other village gained full endorsement since the baseline with other donor support. WARSI fell a little bit short of its expected targets of achieving the endorsement of sixteen CBFM groups within the originally intended timeframe[24]. The project was extended until June 30, 2015 to accommodate for the achievement of intended results. Regardless of this level of achievement and the efficiency of results, for the purpose of this evaluation the outcome is still relevant for an analysis of whether MFS-II supported interventions have contributed to the achieved outcome.

[24] After the extension, WARSI expanded from 13 villages that were listed in their proposal to assist 16 villages with IUCN-NL support.

***Causal Pathways***

There are three possible pathways that may explain this outcome:

1. The first pathway explains the outcome by means of the government's political will to endorse village applications because each administrative level perceives the net benefits of the CBFM scheme.
2. The second pathway explains the outcome by the efforts of WARSI to help the communities meeting the application requirements for village forest concessions and to navigate the bureaucratic procedures leading to endorsement. Specifically, WARSI helped set up CBFM groups, helped formulate forest management plans and proposals and assisted in mapping forest resources and boundaries. To reject this pathway, we need to prove that WARSI advocacy and assistance was not essential (i.e. communities are able to apply for forest management concessions without WARSI facilitation) or that other actors or factors explain the outcome (pathway 3)

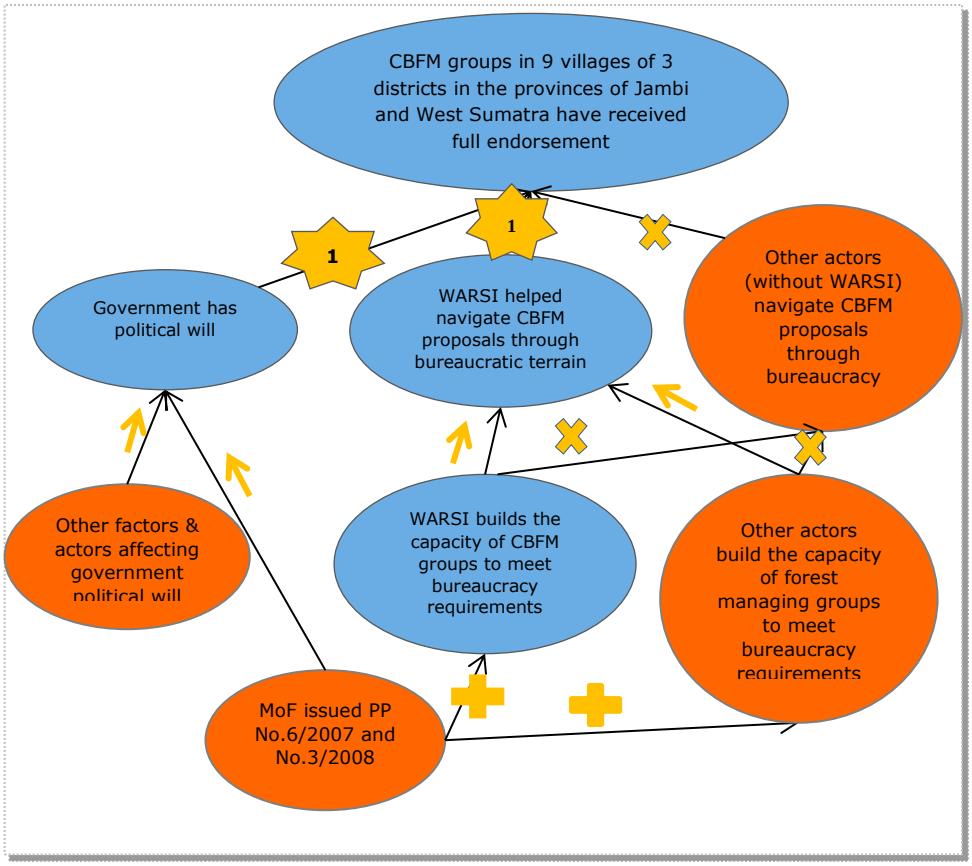

*Figure 1: Pathways that possibly explain the outcome and the nature of the relations between pathways and the outcome, CBFM groups have received full endorsement*

3. The last pathway considers the role of other NGOs to be pertinent in achieving the outcome. In other words, other actors helped the communities to navigate the procedures and requirements for CBFM endorsement.

*Information that confirms or rejects the pathways:*

1. Government's political will to endorse the CBFM groups and their village forest areas explains the outcome

*Information that confirms Pathway 1:*

The issuance of CBFM permits itself can be considered as de jure statements of government's political will. External documents and policy reviews, such as the Alternatives to Slash and Burn (ASB) policy brief (2013) show government support at the local level and amongst government officials for CBFM schemes. Reasons for this support are that CBFM provided an alternative for resolving tenure conflict issues, and that international support backs wider application of CBFM. As such, it may have tipped the balance in favour of community forestry. Various external sources also infer that forest management and tenure issues have become a government interest as it is relevant to the REDD+ and anti-corruption eradication agendas. The issuance of regulatory improvements (Law No. 41/1999 and its Judicial review in 2013, PP No.6/2007 and No.3/2008 providing the basis for CBFM schemes) also indicates government political will.

*Information that rejects Pathway 1:*

Government political will is not always equal at all levels. This information is confirmed in WARSI's own experience where they almost failed to acquire three CBFM permits in Sarolangun District since the former regent was inclined to support the extractive mining industry. Only 6 of the 16 CBFM groups received full endorsement. This is mainly because some of the district heads, such as

Sarolangun and South Solok were initially reluctant and seemed to favour private sector extractive industry development in the area. The areas designated for community forestry are still small. In 2011, only 3 percent of the total forest area designated for CBFM in Jambi met the requirements for CBFM endorsement. Complicated procedures and bureaucratic red tape inhibit more CBFM groups from obtaining endorsement. Often, local governments and community groups do not comprehend the national legislation or are not willing to implement them. In addition, there are very few organisations like WARSI who are policy and procedure savvy and are taking the lead to inform and pressure local governments.

2. WARSI's support to the CBFM groups explains the outcome.

*Information that confirms Pathway 2:*
The head of the Provincial-level Watershed Management Bureau (*Balai Pengelolaan Daerah Aliran Sungai*/BPDAS) Jambi confirmed that WARSI has been assisting the 4 villages in the province in acquiring CBFM permits. A WARSI board member said there is no doubt that WARSI has helped the villages acquire their permits given their competences in lobby and advocacy. WARSI's progress reports show a consistent and logical progress of interventions (establishing managing groups, training, fulfilling requirements, etc.). WARSI's success in CBFM practices and applying the *Hutan Desa* scheme had been acknowledged widely. Another 8 districts have requested their assistance to replicate initiatives. Because of the complicated procedures and the lack of village capacity to comply on its own third-party assistance is still required. There is no evidence of CBFM groups being successful in obtaining recognition without NGO support.

*Information that rejects Pathway 2*: None.

3. Other actors/factors explain the outcome

*Information that confirms Pathway 3:*
WARSI's facilitator in Batanghari district reported that the International Centre for Research in Agroforestry (ICRAF), now known as the World Agroforestry Centre, has contributed by giving additional training on village forest management, while the Alliance of Concerned Citizens of Forest and Land (*Aliansi Masyarakat Peduli Hutan dan Lahan*/AMPAL) has helped with the mapping of forest boundaries. These interventions are independent of WARSI or IUCN support.

*Information that rejects Pathway 3:*
From a desk study of external, secondary resources, the evaluation team found no evidence that other actors have assisted the 9 CBFM groups' proposals and endorsement process. There has been some assistance from other actors, but there has been a division of working areas amongst NGOs with regards to which villages receive assistance from what NGOs in obtaining endorsement. According to the head of BPDAS Jambi, overlaps in assistance were not possible as WARSI and other NGOs coordinated their areas of intervention before assisting villages with the procedural process. With so little of the designated areas for CBFM (3 percent in Jambi) being recognized, there is no reason for competition between NGOs. Other NGOs are indeed active in the province, but no overlaps could be found in target areas. Official data from Jambi's Department of Forestry website shows, for example, that SSS-Pundi Sumatra has assisted 8 CBFM permits in Merangin District (non-WARSI area of intervention).

***Conclusion:***
Based upon the analysis of the information available, we conclude that the first and second pathway are both necessary for explaining the outcome and are only sufficient together: each in itself is not sufficient, but together they are sufficient enough to explain the outcome. They are a causal package that together is necessary and minimally sufficient to explain the outcome. However, the government's political will to endorse CBFM groups and their forests is a careful balance at each administrative level of opponents (companies and officials with close ties to these companies) and supporters of the village forest concessions Pathway 3, namely that the outcome was caused by other actors, does not explain the endorsement of the 9 CBFM groups supported by WARSI, but other actors are known to support similar processes in other districts.

A precondition that explains the general trend to create CBFM groups and to seek their endorsement for the management of village forest areas is the issuance of regulations that made the CBFM scheme possible (PP No.6/2007 and No.3/2008). Although WARSI might have also contributed to the issuance

of these legal instruments, such a hypothesis will not be elaborated in this report since it occurred outside MFS-II support.

*WARSI's role* is very important in the outcome achievement, particularly in terms of providing direct assistance to the nine communities so that they could meet requirements and go through each step required to obtain endorsement. In addition, WARSI's lobby and advocacy has been an important push factor in gaining political will at each administrative level.

### 5.3.2 Outcome 2: CBFM is mainstreamed into West Sumatra province forestry policy.

The second outcome achieved is: "CBFM mainstreamed into West Sumatra provincial forestry policy". The achievement of this outcome is justified with strong evidence in the form of legislation issued by the Provincial Forest Department of West Sumatra, with clear references to CBFM. In June 2012, the Department issued a five-year plan for social forestry development as CBFM mainstreaming roadmap. It stipulates the formation of village forest task forces at provincial level responsible for accelerating the implementation of village forest schemes in West Sumatera[25]. The evaluation team also received scans of the authorization letter signed by the head of West Sumatra's Provincial Forestry Department (SK No.522.4/1089/RHL-2012) as proof of this evidence. In addition, the Governor of West Sumatra has been supportive and open to conservation and forest protection interventions. In January 2013, he signed the REDD+ Provincial Strategy and Action Plan (SRAP) document which stipulated CBFM mainstreaming[26]. Despite these positive changes, the implementation of new initiatives and policies has been laborious and protracted. Very recently, in October 2014, an online news media outlet reported that the West Sumatra Governor had not yet granted permits for 32,386 hectares of village forest due to sparse district initiatives. While there may be other evidence of sluggish government response, this does not automatically indicate a lack of political will. The district governments under the province are still awaiting the submission of CBFM proposals. The district government offices themselves do not have the resources (especially field facilitators) to undertake interventions themselves and rely on NGOs to conduct community-level work. As discussed under MoC 1, there is a lot of bureaucratic red tape that has to be overcome, thus assistance from NGOs is still relevant and much needed to enable village communities to meet prerequisites for *Hutan Desa*.

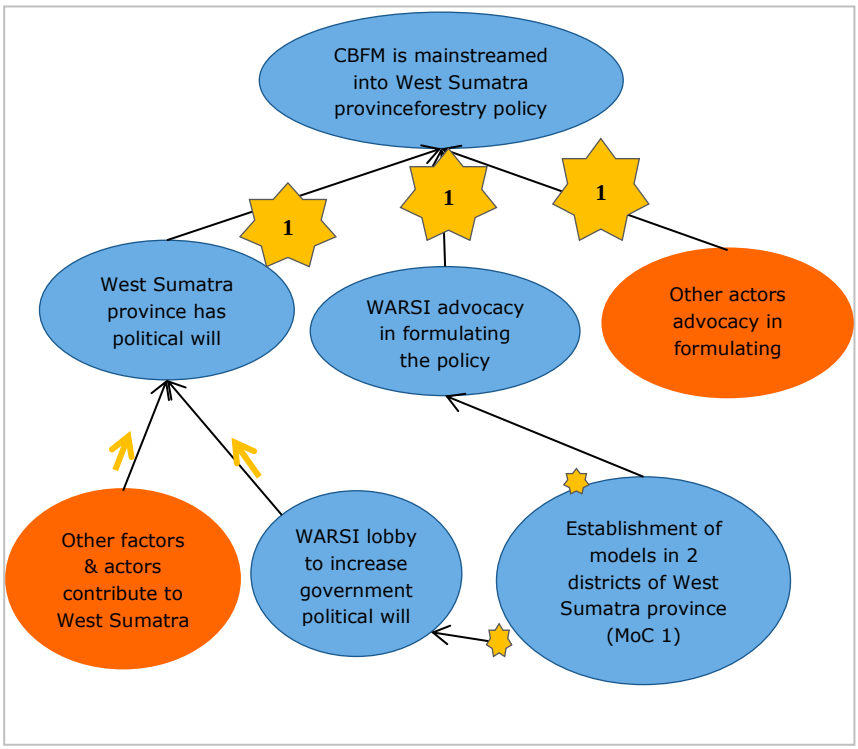

*Figure 2: Pathways that possibly explain the outcome and the nature of the relations between pathways and the outcome, CBFM mainstreamed into West Sumatra province forestry policy*

***Causal Pathways***

There are three possible pathways that possibly explain this outcome:

1. The government's own political will explain the mainstreaming of CBFM in the provincial forest policy. Much like the first pathway of the outcome explained in paragraph 5.3.1, the West

[25] "Dokumen Roadmap PHBM Sumbar", WARSI
[26] "Dokumen SRAP REDD+ Sumbar", WARSI

Sumatra Provincial Government's issuance of a regulation on the strategic plan is in itself a statement of political will. This pathway cannot be rejected.

2. WARSI's advocacy explains the outcome. WARSI contributed to the formulation of the plans and regulations. Its position within the REDD+ Task Force has allowed it to take a prominent role in the formulation of the policy. To reject this pathway, we need evidence showing that WARSI did not have any role CBFM mainstreaming in West Sumatra.
3. The third pathway attributes the role of policy formulation to other NGOs' lobby and advocacy efforts. To reject this pathway we need to find evidence showing that no other NGO except WARSI was involved in the policy formulation process.

*Information that confirms or rejects the pathways:*

1. The government's own political will explain the mainstreaming of CBFM in the provincial forest policy

*Information that confirms Pathway 1*:

All confirming evidence from Pathway 1 in MoC 1 can be applied to confirm Pathway 1 of MoC 2: The issuance of CBFM permits itself is a de jure statement of the government's political will. External documents and policy reviews show government support at the local level and amongst government officials for CBFM schemes (ASB, 2013). CBFM is expected to provide an alternative for resolving tenure conflicts, and international support is backing the wider application of CBFM. As such, it may have tipped the balance in favour of community forestry: Forest management and tenure issues have become a government interest because it is relevant to the REDD+ and anti-corruption eradication agendas. The issuance of regulatory improvements (Law No. 41/1999 and its Judicial review in 2013, PP No.6/2007 and No.3/2008 providing the basis for CBFM schemes) also indicates government political will. In addition, an interview with the head of BPDAS Jambi confirms that WARSI often facilitated provincial or district leaders to attend international forums where government officials became the public faces for promoting CBFM. According to the WARSI director, this is a common approach that is implemented by WARSI to obtain government commitment in all its intervention areas, including West Sumatra. The establishment of two CBFM groups in West Sumatra earned WARSI a good reputation that positioned it well to lobby the government.

*Information that rejects Pathway 1:*

In October 2014, an online media reported that West Sumatra's governor had not granted permit for 32,386 hectares of village forest area due to a lack of district initiatives[27].However, this does not automatically mean that there is a lack of political will since the government also lacks the resources and the know-how to undertake interventions themselves, especially relating to community outreach. This information hence weakly rejects Pathway 1.

2. WARSI's advocacy explains the outcome

*Information that confirms Pathway 2:*

The SRAP document was co-authored by Rainal Daus (WARSI program manager for the IUCN program). The West Sumatra social forestry development plan for year 2012-2017 mentioned WARSI as the only CSO appointed to work with the Provincial-level Watershed Management Bureau (BPDAS) to develop a CBFM task force, which was confirmed by external documents. Based on the sequence of events, it is quite plausible that Pathway 2 may explain the outcome.

*Information that rejects Pathway 2:*

WARSI project reports do not provide enough information regarding lobby and advocacy activities which specifically confirm this pathway.

3. The third pathway attributes the role of policy formulation to other NGOs' lobby and advocacy efforts

*Information that confirms Pathway 3:*

All other authors of SRAP documents are either government officials (Ministry of Forestry, Development Planning Agency, Environmental Impact Management Agency/Bapedalda, National

[27] Dua Koto Pas, Berita Sumbar, "Dishut: Pengelolaan Hutan Nagari di Sumbar Tunggu SK Gubernur," 8 October 2014. Available from http://www.duakotopas.com/2014/10/dishut-pengelolaan-hutan-nagari-di.html (25 November 2014)

Program for Community Empowerment/PNPM) or academia and NGOs (WARSI and WALHI). NGO elements are appointed as part of authors to provide expertise admittedly lacking from the government side.

*Information that rejects Pathway 3:*
The West Sumatra Social Forestry Development Plan for 2012-2017 mentions WARSI as the only CSO appointed to work with BPDAS to develop a task force.

***Conclusion:***
The mainstreaming of CBFM into the West Sumatra Forest policy is the result of different actors that together provide a sufficient explanation for the outcome: they are part of a causal package. The provincial government's willingness to mainstream CBFM into its policies is evidenced in several policies, the formulation of which was co-authored by WAHLI and WARSI, academics and others. WARSI and WALHI hold a strategic position vis-à-vis the local government, which has allowed it to contribute to new strategies and policies. WARSI's reputation was probably influenced by their existing CBFM model and the application of it in two of West Sumatra's districts.

## 5.4 What is the relevance of these changes?

### 5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

The outcomes for which process tracing was conducted were relevant to the institutional goal of WARSI as identified in the 2012 Theory of Change (ToC). WARSI's strategy to achieve the conservation of natural forests and the welfare of forest communities is based upon the accommodation and positive engagement with its stakeholders"[28]. The SPO identified the following pillars to achieve its goal:

- Recognition from the state of management of natural resources by indigenous people and communities.
- Sustainable ecosystems through forest conservation
- Enabling (political) environment through lobby and advocacy for forest management schemes by indigenous people and communities
- Increased value of non-wood forest and ecosystem services
- Government supports at all levels for natural resource management based on ecosystem/landscape and community cultural values

These pillars were also in line with program strategies, which included policy and advocacy and capacity building. The end line evaluation confirms that WARSI's interventions and outcomes are relevant for the realisation of its ToC Both the central government and the sub-national governments are willing to implement CBFM schemes, although the scope may be limited for now. But the government has been responding to international pressure, in particular REDD+ advocates. At the moment political will seems to be strong, but this may change as the newly elected government finalizes the formulation of its new five-year development plan.

As noted in other sections of this report, WARSI's success in increasing household incomes and in providing eco-system services seems to be moderate. This refutes one of the presumptions in the ToC of 2012 as it demonstrates that communities are willing to apply the *Hutan Desa* scheme as a means to 'battle' pressures from encroaching extractive industries, without first having sustainable livelihoods. But this also exposes a gap in the ToC and the results obtained so far. With communities now recognized for their rights to manage the forest, the bigger challenge lies ahead in terms of following up a positive policy environment and official endorsement with real interventions that will sustain community management practices through the creation of economic opportunities. Without alternative livelihoods, community members may still fall back on illegal logging practices or other unsustainable practices that lead to deforestation.

[28] MFS II country evaluations Civil Society component: Baseline Report Indonesia WARSI, November 2012

### 5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

In recent years, the Government of Indonesia (GOI) has implemented reforms to address deforestation through improved forest governance. REDD+ has become one of the key priorities of the government, with institutional arrangements moving forward since the creation of a Presidential REDD+ Task Force in September 2010. In 2013, 10 working groups were established to help the Task Force roll out a national program. In 2013, an official REDD+ Agency was established.

Another relevant change in the context was the issuance of a forest conversion moratorium in 2011 (extended in 2013), effectively postponing new permits to be issued and providing an opportune moment for development actors to address forest governance issues[29].

At the same time, the implementation of CBFM had become more feasible with the issuance of implementation decrees in 2007 and 2008. WARSI, active in Sumatra since the early 90s, had already established positive relations with the local governments. These conditions paved the way for Lubuk Beringin in Jambi to obtain the first *Hutan Desa* certification in 2009. With a successfully implemented model under its belt, WARSI gained a reputable position in Indonesia. A growing interest in deforestation issues and REDD+ has propelled the replication of this model to other districts in Jambi and West Sumatra. This has also been aided by the start of the implementation of REDD+ at the sub-national level for provinces identified as priority areas. These include Jambi and West Sumatra along with 9 other provinces. West Sumatra and Jambi have also committed to taking part in REDD+ implementation through the signing of Memorandums of Understandings (MoUs) with the newly established national REDD+ agency.

### 5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

Ecosystem Alliance's programme goal is *"to improve the livelihoods of the poor and create an inclusive economy, through participatory and responsible management of ecosystems".* It contains three programmatic themes: Livelihoods & Ecosystems, Greening the Economy and People and Climate Change. Three intervention strategies that link these themes are direct poverty alleviation, building civil society, and influencing policy. Major components in the programme are capacity building and learning. WARSI contributes to the Livelihoods and Ecosystems programme.

Ecosystem Alliance introduced the programmatic approach as a means to contribute to civil society development and policy influence. This implies that all EA partners in Indonesia work together to reach joint results. At the EA programmatic level four objectives were set, of which two were merged:

1. The Sustainable Livelihood Initiatives and Models (SLIMs) are a joint effort of the partners under the coordination of NTFP-EP: this will culminate in the organisation of a SLIMs festival as a closure of the EA MFS II programme in 2015. Films will be shown, music will be listened to that related to nature and ecosystems and products will be marketed. The objective is to attract the Indonesian middle class as a consumer and to show the government what is possible by sustainably sourcing and eco-cultural systems' conservation and restoration.
2. Improving land tenure rights are a joint effort under the coordination of WARSI which started in 2013. Two Ministry of Forest regulations were issued in 2014: Peraturan Menteri Kehutanan No. 89/Menhut-II/2014 to replace Peraturan Menteri Kehutanan No. 49/Menhut-II/2008 and Peraturan Menteri Kehutanan No. 88/Menhut-II/2014 which replaced Peraturan Menteri Kehutanan No. 37/Menhut-II/2007. These new procedures mean that the licensing process for communities has been simplified as a result of this joint advocacy as CBFM licenses no longer need to be obtained from the governor.
3. Integrated Landscape Development in Papua and in East Kalimantan. This approach aims to integrate value chain approaches with eco-system restauration. This seemingly new approach helps to overcome the limitations of voluntary standards developed for single commodities, such

[29] Forest Carbon Asia, Other Publication, "Mid-Term Progress Report on the REDD+ Readiness Process in Indonesia", August 2013. Available from http://www.forestcarbonasia.org/other-publications/mid-term-progress-report-redd-readiness-process-indonesia/ (accessed 28 November 2014)

as those for palm oil and to stimulate and integrated perspective on landscape development, connecting different scales of decision making. In Indonesia the focus is on the palm-oil sector and 20 pilot families saw their incomes rise by up to € 30 per month after participating in a pilot on "multilevel commodities" from agroforestry (i.e. various types of crops that can be harvested in different times of the year).

Until so far the impact of WARSI upon livelihoods improvements did not materialise, whereas the assumption under the Livelihoods and Ecosystem's programme is to combine both ecosystems and livelihoods.

The original idea of the EA programme in Indonesia was to halt the expansion of palm oil concessions and mineral concessions. In this light, WARSI's efforts until so far have prevented one mining company to obtain concession rights in Jambi Province and three CBFM groups successfully rejected plans of their local governments to designate forest land into an industrial forest plantation area.[30] WARSI's advocacy in the past has led to the legal recognition of Village Forests and their uptake as a means to invest REDD+ money in Jambi and West Sumatra and its participatory mapping was further implemented by EA partners in Sumatra, Kalimantan and Papua[31].

WARSI's advocacy, together with other EA grantees to simplify the procedures at national and provincial level to obtain Hutan Desa permits and the authority to manage these by CBFM groups, is very relevant to further protect village forests from stopping concessions being given to private sector companies. Also WARSI's efforts at its own project level are relevant contributions to civil society: its attempts to secure local land tenure and resource rights by participatory mapping and planning for CBFM are relevant because national policies are not yet well defined. WARSI has shown that evidence based lobby and advocacy based upon the creation of CBFM groups, helps to change policies at different level in favour. These same efforts also enhance the engagement of communities in defending their own natural resources. However no evidence was found that CBFM helps to create livelihoods assets and that households use sustainable land and resource practices to protect the Hutan Desa they manage.

## 5.5 Explaining factors

### 5.5.1 Internal factors

As a network organisation that has been running for over ten years, WARSI has gained a good reputation for its work in Sumatra. It is one of the better known organisations working in the conservation and forestry field.

At the start of the implementation of the project, IUCN conducted an organisational scan of WARSI using the five capacities framework and applying two additional EA capacities. Four capacities (capability to act, generate, relate, and achieve) were assessed; no scores were provided for the capacity to adapt. Overall, most core capacities and sub-capacities received a respectable '3' (4 being the maximum). The following table presents an overview of the scores for each core capacity and high and low scores from sub-capacities:

Table 7
*IUCN assessment of WARSI against the 5C framework.*

| Capacity | Description | Score |
|---|---|---|
| | 5 Cs | |
| 1 | The capability to act | Mean score of 3 |
| 1.3 | Capability to mobilize human, institutional and financial resources. | 4 |
| 1.5 | Capability to sustain commitment towards target groups | 2 |
| 2 | The capability to generate | Mean score of 2.8 |
| 2.2 | Capability to strengthen public and private institutions and services | 3.3 |

[30] According to WARSI data, community forest rights only cover 64,384 hectares compared to 776,652 hectares designated for industrial forest areas
[31] "MFS II Annual Report 2013", Ecosystems Alliance, 2013

| | | |
|---|---|---|
| 3 | The capability to relate: | Mean score of 3 |
| 4 | The capability to adapt and self-renew | No scores |
| 5 | The capability to achieve coherence | Mean score of 3 |
| 5.1 | Capability to develop a clear mandate, vision and strategy | 4 |
| 5.2 | Capability to put in place a well-defined set of operating principles | 2 |
| | IUCN 2 Cs | |
| 6 | The capability to integrate environmental issues in sustainable development discussions / practice | Mean score of 2.67 |
| 6.3 | Capability to participate in the monitoring of environmental issues and share lessons | 2 |
| 7 | The capability to work in fragile states and on sensitive issues | Mean score of 2.33 |
| 7.2 | Capability to assess a regular working environment (risks, threats, vulnerabilities) | 2 |
| 7.3 | Capability to cope with increasing security challenges | 2 |

Source: IUCN Organisational Scan 2011 (filled in by filled in by Pete Wood, Samdhana)

Since the baseline, WARSI has demonstrated that it is overall a competent organisation. This has also been confirmed by a source within UNDP. The source shared that in 2014 a capacity assessment was conducted as a requirement for grantees. The assessment found WARSI's legal status, mandates and policies, constituency and external support to be satisfactory; as well as its technical, managerial, administrative and financial capacities. There are however some critical findings from the in-country team on WARSI's accountability (See Appendix 2) in terms of reporting the same result to different donors. The IUCN assessment remarked that relations with communities depended on individuals and that beneficiaries were not formally involved in the project structure. This was confirmed during the end line.

### 5.5.2 External factors

Following the *Reformasi* in 1998, the government has normatively demonstrated an increased political will towards forest conservation via the issuance of forestry laws in 1999. Civil society participation was constricted for a long time due to the absence of supporting regulations that prescribed how CBFM should be implemented. Regulations No.6/2007 and No.3/2008 marked the state's acknowledgment of forest community rights, and provide the CBFM implementation guidance. Both regulations worked in combination with other external factors that have been drivers of political will include the anti-corruption agenda and REDD+ schemes. These have opened greater opportunity for civil society actors to mediate between government and community interests. WARSI did not waste such opportunities and was the bridge to government political will and the community interests via a CBFM scheme. CBFM is now a preferred REDD+ strategy and as a result WARSI has earned the trust of the REDD+ agency at the national level as well as from provincial governments interested in REDD+ schemes. This has been an important factor for WARSI's lobby and advocacy effectiveness.

### 5.5.3 Relations CFA-SPO

The Ecosystem Alliance and IUCN have encouraged grantees to jointly cooperate in thematic projects. WARSI is engaged in the Mainstreaming Sustainable Livelihood Initiatives and Models (SLIMs) initiative in Kalimantan. Through the Ecosystem Alliance, WARSI engaged with 9 other organisations (of which one contract was terminated due to performance issues).

WARSI also leads the "land-tenure" project working group that aims to streamline the long and difficult CBFM permit procedures and obtaining government funds for CBFM groups. In doing this, WARSI indicates their awareness and responsiveness to use CFA support to leverage their impact. Had land tenure project been successful (or started earlier), WARSI's interventions could have become less relevant if the CBFM application process was made straightforward enough for communities to apply for management rights on their own. In addition to connecting WARSI to the EA network and stimulating exchange and learning amongst local partner organisations, the CFA-SPO relationship facilitated financial sustainability trainings for all EA partners in November 2014 and January 2015.

# 6. Discussion

## 6.1 Design of the intervention

Overall, WARSI's intervention logic and project design were of good quality. There were two clear focuses, namely on lobby efforts and community level interventions. However, in the implementation WARSI fell short of achieving their objectives at the community level. The priority seems to have been on overseeing the endorsement of community proposals for forest management and supporting the recognition of community-managed *HutanDesa* schemes. WARSI was focused on ensuring that community forest groups could lay claim to forest areas before extractive companies or small holders did so. While this is important and relevant, to sustain development impact interventions that lead to improved livelihood assets based upon NTFP and agroforestry need more emphasis. Without creating economic incentives for the communities who now have forest management rights, WARSI there is a risk that CBFM schemes may not be sustainable. There are sufficient funding opportunities for the SPO to undertake such activities. Future community-based forest management support should have an equal focus on livelihoods interventions as this will create a sufficient exit/sustainability strategy.

WARSI should also utilize its broad network with other CSOs to create economic opportunities. For example, WARSI could work with Mitra Aksi and its own network of partners which include organisations with an expertise in the sustainable livelihoods approach and biogas. Another option would be to focus on a select number of NTFPs produced by community members in the same area and strengthen the value chain and linkages to the international market. WARSI would also benefit from a specific focus on vulnerable groups within forest communities, such as the semi-migratory groups (Orang Rimba) in Jambi and landless farmers living on the edge of nationally protected forest areas.

Another observation is that WARSI is working on sensitive issues, namely the demarcation of community forest land area. If 'do no harm' principles are not properly applied, relations between neighbouring villages could easily sour. This could happen even after forest boundaries have been mapped and officially recognized. WARSI should incorporate this potential risk into project designs and work with experts or organisations that have specific experience in resolving natural resource conflict. Ideally, the local government should be engaged in the process, as mandated under the Social Conflict Management Law of 2012.

The evaluation team also concludes that WARSI's model and design is replicable if certain conditions are in place. First and foremost, external third-party assistance is still required for communities to navigate through the bureaucratic requirements of obtaining endorsement of forest management rights through the Hutan Desa scheme. NGOs or other organisations providing such assistance need to have close relations with the local government, both at district and provincial level. Advocacy and lobby efforts by the NGO need to be clear and focused and ideally should relate to existing policy frameworks. The Hutan Desa status needs to be approved by different government levels, and each needs to be convinced of the net benefit of approving the application. Environmental organisations need to take advantage of political momentum, as WARSI did when official guidelines/procedures for obtaining Hutan Desa endorsement were released by the government in 2007-2008. Success is still dependent on political dynamics, such as leadership stability, regional development plans, and supporting legislation at the local level.

# 7. Conclusion

WARSI's interventions and outcomes were relevant to both the civil society context and MDG 7 because they addressed a gap between natural resource management policies and the opportunities of forest communities to rightfully claim more decision-making power and usage rights over forest resources. On aggregate, WARSI's performance against CIVICUS indicators improved in all five areas: level of organization, practice of values, civic engagement, perception of impact and coping strategies.

WARSI achieved two important outcomes namely: 1) helping nine more villages obtain decrees and endorsements for preserving the village forest (*Hutan Desa*) area; and 2) contributing to the mainstreaming of CBFM in the provincial forest policies of West Sumatra. The first outcome can be clearly attributed to the role of WARSI and MFS II funding. WARSI's role was to assist communities navigate the endorsement process by preparing proposals, establishing forest management groups and developing forest management plans. The success of WARSI's CBFM model has enabled it to gain recognition from the government, which allowed it to play a key role in influencing the West Sumatra provincial policy planning process.

Through the above achievements, WARSI has contributed to reducing forest degradation rates and improving the recognition for community managed forests. In order for these interventions to sustain into the future, more will need to be done to address the economic conditions of village forest groups.

These changes are very relevant in the current context of Indonesia, which also partly explain the causes of the changes that occurred. Indonesia has committed to reducing greenhouse gas emissions by 26 percent by 2020. Reducing emissions from deforestation and forest degradation (REDD) focus on improving forest management and governance. Community forest management practices have gained recognition and political support and are one of the potential means by which carbon emissions can be reduced. As such, WARSI's work has been highly strategic and is likely to gain continued support. However there is not yet an improvement of the livelihoods of those households that manage the Hutan Desa.

Table 8
*Summary of findings*

| When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements? | Score |
|---|---|
| The CS interventions were well designed | 7 |
| The CS interventions were implemented as designed | 5 |
| The CS interventions reached their objectives | 5 |
| The observed outcomes are attributable to the CS interventions | 7 |
| The observed CS outcomes are relevant to the beneficiaries of the SPO | 7 |

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

# Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration
- 1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

| Dimension | | Indicators | Question | Change |
|---|---|---|---|---|
| Civic engagement | 1 | Needs of marginalised groups | How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies? | +1 |
| | 2 | Involvement of target groups | What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities? | +1 |
| | 3 | Political engagement | How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups? | -1 |
| | | | | |
| Level of organisation | 5 | Relations with other organisations | In the past 12 months what has been the most intensive interaction you had with other CSOs? | +1 |
| | 5 | Frequency of dialogue with closest CSO | In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with? | +1 |
| | 6 | Defending the interests of marginalised groups | Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs? | +1 |
| | 7 | Composition current financial resource base | How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking? | +2 |
| | | | | |
| Practice of Values | 8 | Downward accountability | To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them? | 0 |
| | 9 | Composition of social organs | What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for? | +1 |
| | 10 | External financial auditing | How regularly is your organisation audited externally? | 0 |
| | | | | |
| Perception of impact | 11 | Client satisfaction | What are the most important concerns of your target groups? How do your services take into account those important concerns? | +1 |
| | 12 | Civil society impact | In the past 12 months, what impact did you have on building a strong civil society? | +1 |
| | 13 | Relation with public sector organisations. | In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives? | +2 |
| | 14 | Relation with private sector organisations | In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective? | -1 |
| | 15 | Influence upon public policies, | How successful have you been in influencing public policies and practices in the past 2 years? | +2 |

| | | | | |
|---|---|---|---|---|
| | | rules, regulations | | |
| | 16 | Influence upon private sector agencies' policies, rules, regulations. | How successful have you been in influencing private sector policies and practices in the past 2 years? | 0 |
| | | | | |
| CS context | 17 | Coping strategies | In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society. | +2 |

# Appendix 2 Changes in civil society indicators between 2012 and 2014

## 1. Civic Engagement

### 1.1. Needs of marginalised groups SPO

Table 9

*Current status of WARSI assisted CBFM villages*

| No | Province | District | Village | Status | Donor |
|---|---|---|---|---|---|
| 1 | Jambi | Bungo | Senamat Ulu Village | Fully endorsed | IUCN |
| 2 | | | Laman Panjang Village | Fully endorsed | IUCN |
| 3 | | | Buat Village | Fully endorsed | IUCN |
| 4 | | | Sungai Telang Village | Fully endorsed | IUCN |
| 5 | | | Lubuk Beringin Village | Fully endorsed (prior to baseline) | Non-IUCN* |
| 6 | | Batanghari | Jelutih Village | Fully endorsed | IUCN |
| 7 | | | Hajran Village | Fully endorsed | IUCN |
| 8 | | | Olak Besar Village | Fully endorsed | IUCN |
| 9 | | Sarolangun | Lubuk Bedorong Village | Have not been designated by the ministry | IUCN |
| 10 | | | Napal Melintang Village | Have not been designated by the ministry | IUCN |
| 11 | | | Berkun Village | Have not been designated by the ministry | IUCN |
| 12 | West Sumatra | Solok | Nagari Simanau | Fully endorsed | IUCN |

| 19 | | | Nagari Koto Baru | Waiting final approval | IUCN |
| 20 | | | Nagari Pulakek Koto Baru | Waiting final approval | IUCN |

Sources: evaluation workshop, project documents, Department of Forestry website West Sumatra
Note: The blue highlights represent endorsed CBFM groups since the baseline that are IUCN-funded. Villages number 1, 2, 4 were already in the middle of endorsement process when IUCN project commenced. Villages in Sarolangun district have not been officially designated by the Ministry, thus WARSI excludes them for the moment from being reported as having CBFM groups established.

IUCN supported WARSI to assist the establishment and endorsement of 16 community-based forest management (CBFM) groups in five districts along the Batanghari watershed, which runs through the provinces of Jambi and West Sumatra. A total of 20 villages have been supported by WARSI, of which 10 have received state-recognition and authority to use the village forest area for production activities (agroforestry, community logging, NTFP, ecotourism) for the next 35 years. Nine of these are IUCN-supported. Without the existence of CBFM groups and government recognition, it is likely that private sector will be the one to benefit from forest resources by obtaining concession rights. WARSI's role has been to encourage and facilitate the CBFM groups to meet bureaucratic requirements. Without such facilitation, communities would unlikely receive recognition for their long-term rights to manage forest resources through permits/concessions from the government. These CBFM groups are supposed to defend the rights of ethnic minorities that are dependent upon forest resources.

The CBFM model is being replicated by other organizations in Sumatra. By rule, the community should acquire a governor's permit for at least two years after an area has been designated village forest. If no permit is acquired in the two years after the designation, the Ministry of Forestry can change the status/designation of the forest area.

The successes of South Solok and Solok Districts in West Sumatra generated a number of requests from communities in the area for WARSI to facilitate similar activities. There are at least another 8

districts in West Sumatra Province asking for assistance, but WARSI has not yet been able to fulfil all of these requests. In 2012, the Provincial Government of West Sumatra produced a five-year road map (2012-2017) for the expansion of village forests and social forest schemes to cover an area of 500,000 hectares. The government established a Task Force on Social Forestry, which functions as a focal point for communities and stakeholders to propose community-based forest management and for the expansion of community-based forestry management (village forests, social forests and customary forests). West Sumatera has become the first province to mainstream village forest schemes in their forestry policy. With such a policy, it is expected that more communities can benefit from CBFM in the near future.

Recently, WARSI and other Ecosystem Alliance (EA) grantees were successful to widen the application of CBFM by advocating the Ministry of Forestry to streamline the application procedures. As this effort aims to shorten and simplify procedures required for CBFM authorisation, it opens the opportunity for more village communities in Indonesia to attain the benefit of CBFM. This can be considered a very strategic effort and important success[32].

The nature of change would perfectly match civic engagement (more marginalised groups reached) if there were no questions about the accountability and capacity of CBFM groups to defend the interests of the community they represent (See 2.7). WARSI has been criticized as becoming more 'elitist' in their attitude and interventions since they have received considerable recognition for their efforts at the national and international level.

## 1.2. Involvement of target groups SPO

As during the baseline, WARSI claimed that their field staff play a critical role in accompanying communities. Although the SPO claims to encourage and ensure community participation by having rigorous standard operational procedures for community facilitation in place, target groups' decision-making space is limited only to the affairs of each CBFM. The in-country team came across criticisms of WARSI's growing tendency to be less engaged at the community level. Facilitators are growing less willing to have close engagement with villagers, preferring to limit engagement to more accessible members of the community like village leaders.

In the 2013 general assembly, two CBFM group representatives became WARSI members. In spite of this, there are no examples which demonstrate that the representation of target groups has had any effect on decision-making within WARSI. Nevertheless, it can still be considered an improvement in the involvement of target groups compared to the baseline situation.

## 1.3. Intensity of political engagement SPO

During the past two years, there has been some controversy within the SPO on the way they see themselves with regards to political engagement. This controversy arose when WARSI decided to support some individual WARSI members in district legislative elections, which was seen by some as an opportunity to have more power to influence pro-conservation policies. In doing this, WARSI has attempted to influence the public's political choices using their resources, and may have inevitably affiliated themselves with certain political parties. This may be seen as contradicting WARSI's own organisational values, described in their strategic plan as being "non-partisan"[33].

External to this rather controversial issue, WARSI's strength still lies in their ability as a network to influence and work with local governments. WARSI works within the confines of forest policies, and as such is able to lobby and advocate for strategies that recognize community forestry rights.

# 2. Level of organisation

## 2.1. Relations with other organisations SPO

WARSI was formed on 1992 as an alliance of CSOs from four provinces (Jambi, Bengkulu, West Sumatera, and Riau) in Sumatra who had a shared focus on conservation and community empowerment[34].WARSI is well known for their work on spatial planning and social forestry issues. Some members of the alliance are currently still working as independent CSOs/NGOs, therefore WARSI has traditional alliances with the likes of PKBI, Yayasan Gita Buana, and LBH Palembang. WARSI's network is not limited to working with other CSOs on community initiatives, but also expands to lobby work.

WARSI cooperates with other Ecosystem Alliance grantees on thematic projects. WARSI leads a joint advocacy intervention with WALHI, Telapak, and Samdhana focusing on land tenure rights. Together with Telapak, WALHI, Gita Buana, YMI, Samdhana, PT PPMA, and YKWS, WARSI is also a member of a joint advocacy group led by NTFP-EP for Mainstreaming Sustainable Livelihood Initiatives and Models (SLIMs)[35]. The Ecosystem Alliance encouraged and facilitated such cooperation since 2013. WARSI's program logical framework also specifically includes this cooperation into its agenda. WARSI has worked successfully to simplify the procedures for obtaining hutan desa endorsement, as seen from the issuance of Peraturan Menteri Kehutanan No. 89/Menhut-II/2014 and Peraturan Menteri Kehutanan No. 88/Menhut-II/2014 to replace Peraturan Menteri Kehutanan No. 49/Menhut-II/2008 and Peraturan Menteri Kehutanan No. 37/Menhut-II/2007.

WARSI worked together with WALHI in West Sumatra, and with ICRAF (the International Centre for Research in Agroforestry, better known as World Agroforestry Centre) and RSPB (Royal Society for the Protection of Birds) in Jambi, in the REDD+ Task Force which also consists of academicians, forestry officials, the Provincial Development Planning Agency (Bappeda), and the provincial environment impact planning agency.

At CBFM group level, WARSI often shares their target groups with other NGOs such as: Mitra Aksi (focus on education, DRR, and reproductive health), AMAN (indigenous rights), SSS-Pundi Sumatera (livelihood), and PPO (organic farming) to form strategic partnerships on specific issues. WARSI considers such cooperation as mutual considering WARSI's limited capacity[36]in community development. However, based on an interview conducted by the evaluation team with a WARSI field facilitator, it seems that the support from other CSOs/NGOs is sometimes overlapping rather than mutually beneficial. Jelutih, Hajran, and Olak Besar CBFM groups have received assistance from Ampal for biodiversity mapping, Setara for land intensification, and ICRAF for community forest management[37]. All of the aforementioned areas of support are also part of WARSI's planned activities. As such, it raises concerns regarding accountability as sometimes a single outcome can be claimed by many actors[38]. Nevertheless, the establishment and recognition of CBFM groups has attracted more CSOs/NGOs to work with these groups, as such it can be seen as an improvement of this indicator. In other words, the recognition of community groups' forest management rights has attracted greater support from other CSOs.

## 2.2. Frequency of dialogue with closest civil society organisations SPO

Since January 2013, WARSI has been working with and leading other Ecosystem Alliance grantees in a thematic working group on land tenure rights. This task force shares documents and data, coordinates strategies, attends various national forums. WARSI engages intensively with the Working Group Pemberdayaan (WGP) in the Ministry of Forestry[39] to provide inputs to revisions on regulations

[37] Interview with Nofri Hidayat, WARSI field facilitator, Jambi, 14 November 2014
[38] Interview with Hambali, WARSI board, Jambi, 13 November 2014
[39] "Concept Note Land Tenure Thematic", WARSI, 18 May 2012, p. 4

pertaining to *Hutan Desa*. In this regard, the intensity and frequency of relations among CSOs within the task force has improved compared to the baseline as a result of IUCN's intervention.

During the workshop organised as part of the evaluation, participants claimed that WARSI benefits from sharing target groups and intervention areas with other CSOs/NGOs at the CBFM level (as mentioned in prior indicator). But there is no evidence that such mutual relationships have been well planned or programmatically acknowledged (i.e. coordination meetings, MoU, etc.). A board member also mentioned that WARSI never formally approached Mitra Aksi to discuss their cooperation. Another interesting finding is that the same individuals seem to be involved in different organisations, holding a number of titles and positions. For example, one WARSI board members is also on the board of Mitra Aksi and the treasurer for SSS-Pundi Sumatera. In another example, the former WARSI director is also a board member of SSS-Pundi Sumatera[40]. This indicates that while WARSI's network seems to be extensive, it deals with many of the same individuals holding different positions in a host of CSOs.

At the CBFM level, monthly informal meetings are held, and formal meetings annually with the government where they have to present their work plan, report results achieved, obstacles, etc. CBFM groups have also started to meet, share and learn from each other, although this is still not a regular affair. For example, three CBFM villages in Batanghari District have picked up skills in cardamom agroforestry, learning from their counterparts from Solok District[41].

## 2.3. Defending the interests of marginalised groups SPO

The communities of 10 villages (9 IUCN funded) have been given legal authority to use the village forest for limited production activities. Without this recognition, they would be exposed to legal penalties or would compete with corporations and companies over forest management rights. The recognition of this right is still considered the most appropriate political instrument to defend the interests of minority forest groups and of local communities' vis-à-vis forest concessions controlled by private sector organisations.

The communities only have a two-year period to acquire village forest permits. If no permit is granted within that period, the village forest designation will be withdrawn. This almost happened in Sarolangun District, where the community had to race against a mining corporation who had proposed to utilize the limited production forest area. The village forest scheme and CBFM groups also protect the designated area from unclear or conflicting regulations issued by the government. The protection afforded by the *Hutan Desa* scheme provides an opportunity for communities to stake a claim to forest resources and challenge concessions. In another case, WARSI assisted three villages to approach the local government to voice their rejection of plans to designate a large area of land as industrial forest plantation area (*Hutan Tanaman Industri* or HTI). According to WARSI data, community forest rights only cover 64,384 hectares compared to 776,652hectaes designated for industrial forest areas[42].

For villages in the Province of West Sumatra, CBFM is in line with the customary land scheme (the "Nagari" forest) which previously was not acknowledged by the state. This could be the main reason why West Sumatra chose to mainstream CBFM in their forestry policy as there have been numerous disputes caused by the absence of state acknowledgment of the "Nagari" forest customary law. The "Nagari" customary law see lands as extended family property, rather than individually owned.

Although CBFM intend to defend the interests of marginalized forest communities, critical flaws in its practical implementation could lead to negative results. Without solid interventions to organise the community, the CBFM group could fall into the hands of new elites at village level. In combination with weak livelihoods interventions to create sustainable alternative incomes, such a situation could attract elements from the private sector seeking to benefit from village forests. This is especially a risk if the

[40] Pusat Informasi Kehutanan Provinsi Jambi, "LSM di Provinsi Jambi". Available from http://infokehutanan.jambiprov.go.id/?v=pr&id=165 (20 November 2014)

[41] Interview with Nofri Hidayat, WARSI field facilitator, Jambi, 14 November 2014

[42] Aji Wihardandi, "Tiga Desa di Jambi Tolak Ekspansi Perkebunan HTI", Mongabay Indonesia, 22 November 2013. Available from http://www.mongabay.co.id/2013/11/22/tiga-desa-di-jambi-tolak-ekspansi-perkebunan-hti/ (accessed 20 November 2014); Bock, Mattew J. 2012. Formalization and Community Forestry in Jambi, Indonesia: Indigenous Rights, Rural Migrants, and The Informal Divide. The Josef Korbel Journal of Advance International Studies – Summer 2012, Volume 4, p. 56. Available from https://www.du.edu/korbel/jais/journal/volume4/volume4_bock.pdf (accessed 27 October 2014)

CBFM group is run by village elites that are attracted to quick financial returns offered by corporations of this nature. Should this happen, the CBFM scheme would basically shift poor policy-making practices from district to village level, making it even harder to control or rectify. Erin Sills, senior researcher of Centre for International Forestry Research (CIFOR) purported that "if you cannot offer a sustainable livelihood, your intervention basically only shifts or postpones deforestation"[43]. These concerns are shared by some on WARSI's board who are critical towards WARSI's lack of progress in CBFM livelihood development[44]. Even if WARSI's prioritization of winning the race against the corporate sector can be justified, they should not be complacent with the follow-up interventions.

Referring to input-output-outcome analysis[45], WARSI has achieved most targets related to community organisation (Objective 1); however the logical framework did not anticipate CBFM group inclusivity issues. As such, WARSI has seemingly not anticipated to what degree the CBFM groups truly represent the community. In order for the CBFM groups to be sustainable, they need to perform a function at the community level. CBFM group capacity to defend the interest of the community is also likely to depend on WARSI's assistance to make CBFM groups effective in providing community support, especially in the area of livelihoods interventions. Indicator 4.1 will provide more detailed analysis about this, but it can be concluded in short that with regards to sustainable or alternative livelihoods, most CBFM groups are still not satisfied. Moreover, the evaluation input-output analysis stipulated that external documents do criticize the development of the plans and the Hutan Desa and have noted that once Hutan Desa status has been acquired, the financial burden to implement falls on the village. This has led to some villages considering 'giving back' the permit to the government[46]. Village forest permits can also be terminated based on a joint evaluation between forest authorities and the CBFM group.

It is unfortunate that this evaluation cannot select indicator 2.3 and 4.1 for process tracing to get a better judgment due to limited time and resources available.

### 2.4. Composition financial resource base SPO

WARSI has been able to secure more funding sources in recent years. From RFN, WARSI received USD 1.8 million for an indigenous people protection program (2012-2017) and USD 550,000 for a REDD+ program (2013-2015). From TFCA-Sumatra (USAID) they receive around USD 640,000 for a conservation project around Kerinci Seblat National Park (2011-2016). Another USD 550,000 was secured from the Climate and Land Use Alliance (CLUA) for a sustainable forest management project in 2013. WARSI also received around USD 300,000 from the Margaret A. Cargill grant scheme. This indicates that WARSI is able to benefit from a growing donor interest in community forestry issues and REDD+ in Indonesia. Nonetheless, WARSI still depends highly on international donor support.

## 3. Practice of values

### 3.1. Downward accountability SPO

WARSI holds general assembly meetings every three years, during which WARSI's members evaluate the management's accountability, and decide whether or not to change the composition of the board

[43] Michael Day, "Apakah proyek 'mata pencaharian alternatif' efektif", Kabar HUTAN, 17 February 2014. Available from http://blog.cifor.org/21368/apakah-proyek-mata-pencaharian-alternatif-efektif#.VHN7IWdPE24 (accessed 20 November 2014)

Blindern, Norway: Center for Development and the Environment University of Oslo, p. 78. Available from https://www.duo.uio.no/bitstream/handle/10852/36822/SARI-Master.pdf?sequence=1 (accessed 20 November 2014); Maryudi, Ahmad. 2013. *Enabling Forest Users to Exercise Their Rights: Rethinking Barriers to Communities and Smallholders Earning Their Living from Timber in Indonesia*. Paper prepared for RECOFTC The Center for People and Forests, Yogyakarta, February 2013, p. 14. Available from http://www.rightsandresources.org/wp-content/exported-pdf/reportindonesiaenablingforestuserstoexercisetheirrightsfinal.pdf (accessed 20 November 2014)

or the management. The last general assembly was held in 2013. WARSI appointed a new director to replace the former since based on WARSI's articles of association; the director cannot hold the position for more than a two-year period. WARSI undertakes organisational evaluations every five years (a mid-term in their 10 year-strategic planning cycle), and the evaluation is to be reported at the forthcoming general assembly. WARSI's board and executives also meet at least once every 6 months to monitor WARSI's organisational course and performance. However, there have been reports that these meetings are not effective enough and that WARSI has never conducted an external evaluation. During the workshop of this evaluation, WARSI's program manager for the IUCN project was unable to provide information regarding WARSI's current financial composition as this was regarded to be the authority of the director.

## 3.2. Composition of social SPO

The composition of WARSI's board changes every three years. There are no representatives of WARSI's target groups in the board structure. The advisory board consists of 4 men and 2 women, while the monitoring board consists of 2 men and 1 woman. WARSI applies a 30 percent quota for women representation in the board and management as part of their commitment towards gender mainstreaming.

During the 2013 general assembly, WARSI inaugurated 18 new members consisted of 2 CBFM group leaders, 2 customary leaders, and other community leaders. Although WARSI's membership is open, candidates have to pass a fit-and-proper test and need at least two references from two members who have been part of the general assembly for a minimum of two years. WARSI's director reported that they decided to include members representing target groups as a strategy to maintain WARSI's relationship with their target groups and focal points. While this is an improvement in the composition of WARSI's membership base, it does not change the structure of the board. The new members will have voting power as members, but their ability to influence organisation direction can only be measured in the next general assembly which is to take place in 2016.

## 3.3. External financial auditing SPO

WARSI has not conducted an external financial audit for their institution; all audits are project-based. This is the same as the conditions during the baseline.

WARSI management reported that overlaps in funding are possible and considered beneficial to cope with unanticipated needs[47].WARSI's director further explained that most projects are separated geographically, but that there is mutual complementary between REDD+ and IUCN projects. But the evaluation team has some concerns with this explanation since this cannot be backed up by an institutional audit. WARSI could claim the same achievements for different projects. The evaluation team notes that it is hard to distinguish between REDD+ and EA contributions to WARSI's achievement in influencing the Province of West Sumatra province to mainstream CBFM without reviewing an institutional audit result (see 4.5).

In 2010 WARSI reported facing difficulties in "finding the balance between organisational independence and the need to serve public sector's and donor's agenda"[48] as one of their challenges. Based on comments from one of the board members and responses from WARSI's management it seems that this challenge continues to persist.

[47] Workshop with WARSI, Jambi, 12 November 2014

# 4. Perception of impact

## 4.1. Client satisfaction SPO

WARSI's management is confident that the 9 IUCN-supported CBFM groups are satisfied with the legal certainty regarding the rights to use village forests, but WARSI management are less confident with CBFM groups' satisfaction regarding livelihood improvement as they admit that such benefits are still very limited. The above statement is consistent with the findings from the input-output-outcome analysis. There is no evidence that households have adopted more sustainable land and resource use practices or that they benefit from improvements in livelihoods assets, except for 20 model households selected for "multilevel commodities" interventions. The incomes of these households reportedly increased by IDR 500,000 per month. Participants in the end line workshop reported that based on a longitudinal study on 800 households between 2012 and 2013, household income increased an average of IDR 50,000 a month. However, the evaluation team did not receive this document from WARSI. Even if the evidence does exist, an increase of just under USD 5 dollars is insignificant compared to the poverty line (IDR 407,437/month according to BPS standards for 2013[49]) and monthly inflation rates of around 6 percent[50].

With regards to the interventions to support villages in having their own electricity supply, only 48 houses from one village benefitted from the hydroelectric power generation in 2013 with a possible addition of 160 houses in 2014. However, it is worthy to note that the addition resulted from the government financial support to the scheme in response to WARSI's lobby and a community's proposal. In conclusion, with regards to sustainable or alternative livelihoods, most CBFM groups are still not satisfied.

It is unfortunate that WARSI does not monitor client satisfaction. This kind of information would be beneficial to WARSI to illustrate how their assistance in completing administrative requirements for the *Hutan Desa* scheme has been received by the villages and the CBFM groups. It is likely that the formal process was sped up with WARSI's help.

## 4.2. Civil society impact SPO

WARSI' acceptance of the P.49/Menhut-II/2008 regulation has caused controversy among other forest conservation NGOs (notably WALHI and AMAN). Most notably, AMAN rejected the concessionary arrangements because it only recognized formally established villages in and around production or protection forests and excluded nomadic groups living in forested areas51. However, WARSI decided to use the law as an opportunity, rather than oppose it as they believe that if no concrete action is taken to ensure that forest people manage their own forest, then the private sector will be the first to benefit. WARSI's stand point is that competing with the private sector to acquire authority to use limited production forests is more impactful than waiting for a flawless policy to be put in place. Thus, the scale up of CBFM has been their priority. This decision resulted in WARSI being the first NGO to put in place a village forest in 2009 (Lubuk Beringin Village, Jambi). At present more NGOs have followed suit in Jambi and other provinces, including those who initially disagreed with WARSI[52]. After WARSI's success, Alternatives to Slash and Burn (ASB) reported that "*Expectations that resolving tenure conflicts would facilitate flows of REDD investment to the first Hutan Desa case*"[53]. These

[53] Akiefnawati, R., Villamor, G. B., Ayat, A., Galudra, G., van Noordwijk, M. 2010. Stewardship Agreements to Reduce Emissions from Deforestation and Degradation (REDD) in Indonesia. ASB Policybrief 18. Nairobi: ASB Partnership for the Tropical Forest Margins, p. 1. Available from http://www.worldagroforestrycentre.org/sea/Publications/files/policybrief/PB0013-10.PDF (accessed 20 November 2014)

conditions have indeed emerged. This may also explain why more NGOs have joined the CBFM bandwagon. Jambi province currently has 25 CBFM groups covering 54,978 hectare of village-forest area; the largest in Indonesia. However, some NGOs (i.e. AMAN) still think the CBFM scheme is not a fair solution for customary communities whose forest has been taken over by the state[54], as such they insist on a special acknowledgment outside the CBFM scheme[55].

As CBFM groups have become stronger, they are starting to form an umbrella organization and have begun to interact with one another to share and learn[56]. This entails regular meetings between CBFM groups and government officials. No official entity has been set up, but according to WARSI this is likely to take shape in the next coming years.

WARSI and IUCN have noted that one of the benefits of establishing the CBFM scheme is in the mapping of forest resources and boundaries. In the *Hutan Desa* scheme, verifying boundaries is a critical step in the process for granting management rights to the community. During the evaluation team visit, it was found that WARSI field staff had just recently mediated a conflict about village borders between three villages in Batanghari District. However, the opposite conclusion could also be drawn, namely that the mapping of village forests and boundaries is cause for disputes between villages. Poorly defined borders, in combination with an increased interest in the benefits of village forests can cause potential conflict to resurface. This information is based on the evaluation team's interview with a WARSI village facilitator of Bantanghari District who had just mediated the resolution of village boundaries between three villages. In conclusion, establishing boundaries can be a barrier to formalizing the *Hutan Desa*, as the process is difficult and sensitive and can lead to very positive or very negative consequences.

In West Sumatra, the absence of state acknowledgement of the Nagari customary land regulations up to2008 caused horizontal disputes within the society. The CBFM scheme mainstreamed by the West Sumatran government through the Provincial Regulation No.16/2008, aimed to accommodate and utilize customary Nagari land for forest conservation. This means that in the process, the provincial government and NGOs working on mainstreaming had to deal with disputes, with possible positive or negative impacts. The CBFM scheme has been hailed by some researchers because it *offers prospects for wider use in conflict resolution of forest boundaries*[57]. However, for the period under review, there is little evidence from WARSI reports that conflict resolution has indeed occurred, except for a case in Batanghari District. Based on the evaluation team's interview with a WARSI facilitator, they have just mediated a border resolution among three CBFM villages (Hajran, Jelutih, Olak Besar)[58] which saw Hajran village, whose village-forest area is only 2 percent compared to other villages, receive more forest areas from the two neighbouring villages. Although it seems that the resolution was likely aimed to give Hajran village more incentives to sustain their CBFM program, border issues among the three villages have been solved as for now (although issues over forest area control could emerge in the future).

Gaining formal recognition for Hutan Desa and CBFM is still an extensive process. Even if WARSI's lobby for a more streamlined process is successful, communities will probably still rely on third-party, external assistance in the technical mapping process, navigating procedures and funding the process. For villages where the scheme is in place, successful conservation will rely on the ability of the community group to safeguard forest areas, establish and enforce rules, and deterring destructive practices that may arise from within the village or from neighbouring communities. Granted, for a number of communities they have been victorious against extractive companies, but there is still a

way to go in making the forest they have protected an economically profitable to them as a means to sustain their livelihoods.

## 4.3. Relation with public sector organisations SPO

WARSI's management has a specific operational strategy for their relationship with the government, which includes different approaches (soft-moderate-hard) based on potential responses. Soft approaches or lobby are considered the most effective in gaining the commitment and attention of the public sector. WARSI also works on gaining recognition by bringing local stakeholders, such as provincial and district leaders, to international forums where they are 'compelled' to become the voice and the face for CBFM public relations[59].

A policy brief produced by ASB suggested that WARSI has been successful in building relations with public sector because their ability in "communicating net benefit at each government level". However, WARSI's relationship with government also depends on the government's own political will. In Sarolangun District, WARSI's assisted proposals still have not passed district approval due to the regent's inclination to side with mining corporations.

Although Regulations No.6/2007 and No.3/2008, and P.49/Menhut-II/2008 detail how to reconcile forest management targets and livelihood interests of forest communities within the framework of a permanent forest estate, the implementation of the CBFM procedures is complicated. The bureaucracy involved means that it remains difficult for villagers to comply. In 2011, Jambi Province had achieved only 3 percent of its target for designated CBFM[60], while there was growing international and national pressure and interest for CBFM as a solution to forestry issues (see 5.1). In this regard, WARSI is facilitating the implementation of government policies and practices. WARSI was appointed to be part of the REDD+ Task Forces in West Sumatra and Jambi[61]. In West Sumatra they have been asked to assist in the formulation of REDD+ strategic plan by the local government. WARSI was also appointed by the Department of Forestry in West Sumatra to help establish and guide a West Sumatran CBFM task-force. What this indicates is that the relations with the local government are mutually beneficial. WARSI provides technical inputs to the government, while as an organization they are able to approach decision-makers and try to influence their agenda.

Overall, lobby and advocacy seems to be the main strength of the WARSI as affirmed by one of its board members: "There is no doubt that WARSI is very good at it"[62]. But he also added that WARSI's tendency to rely on their ability and good relationship with government 'elite' may turn them into civil society 'elite'. According to him, "current field staff tend to take the easy way by approaching only the village leadership instead of the common people". The evaluation team have not shared these critical views with WARSI's management team, but from our interview with one of WARSI's field staff we got the impression that there is some justification of the views of the board member. The field staff currently has to handle 3 villages in a vast and geographically difficult terrain with just a year of experience. During the interview, the field staff reported that he found it very difficult to relate with common villagers whose education background is low, and that for him it works best to approach the community leaders since the villagers are not homogenous and conformist[63]. With regards to public sector relations, the conducive relations with village leaders is positive, however not if this is at the expense of taking into account the views of other groups in the community.

Since the baseline, relations with the district and provincial governments have generally improved and have become more formal. This is a result of WARSI's appointment as jointly being responsible for forming a CBFM provincial task force in Jambi (2013) and West Sumatra (end of 2012) together with

BPDAS. This has helped WARSI receive formal recognition of its role to coordinate CBFM. At the district level, WARSI faced constraints with the district of Sarolangun during the baseline due to the government's inclination to support mining activities. WARSI successfully approached the Forestry Department of the District to build support for CBFM interventions. This in turn resulted in more conducive relations. In South Solok, where a CBFM task force was already in place, CBFM interventions were in fact expanded to four villages due to support gained from the Department of Forestry. These examples illustrate improved relations with local government since the baseline.

## 4.4. Relation with private sector organisations SPO

In the past, WARSI has undertaken joint efforts with the private sector in the area of ecological restoration and marketing of NTFPs. But since 2012 until the present, they have not had similar relations. During the evaluation workshop, WARSI's director reported that such forms of collaboration are no longer continued sine they are considered to be ineffective.

P.49/Menhut-II/2008 provided opportunities for village communities, customary communities, and small holders to use protected-forest edge areas. However, the complicated bureaucracy gives private sector companies an advantage in navigating regulations and procedures. With WARSI working with communities to 'win the race' against private sector control of forest areas, WARSI continues to be perceived by most private sector actors, especially mining and plantation corporations, as a threat or a competitor in land tenure authorization.

## 4.5. Influence upon public policies, rules, regulations SPO

In obtaining CBFM permits, the process begins with WARSI assisting villages in mapping exercises to determine their socio-economic characteristics, define spatial boundaries and map forests and biodiversity. WARSI then assists the villages in establishing forest managing groups through a consultative process. These are administrative requirements to obtain the Hutan Desa permit. WARSI then helps these groups navigate through bureaucratic terrain at different levels: district, province and Ministerial level to apply for the permit. However, this bottom-up approach would not be sufficient if WARSI did not work on the top-down policy level as well. WARSI has been working on both approaches, and worked with other IUCN-NL grantees to simplify the official procedures to obtain the official recognition for CBFM.

At district and provincial level, WARSI's lobby activities include facilitating regular dialogue between CBFM groups and the related stakeholders, promoting forest managing groups to convince local government of their ability (for example by convening both parties at national forestry conferences), and persuading district and provincial governments that village forests will benefit both the community and the government. All authorized CBFM permits required district and provincial governments to submit a proposal (containing recommendations to grant the permits villages) to the Village Forest Agency of the Ministry of Forestry. As such, it can be said that WARSI has contributed to turning district's and provinces' political will and policy in favour of village communities.

WARSI has successfully lobbied for Batanghari and Sarolangun district governments in Jambi to form *Pokja PHBM* (CBFM task forces) dedicated to helping village communities apply for CBFM permits[64]. The regent of South Solok District, West Sumatra has also decided to further support a long-term Village Forest Management Plan and has allocated funds from the 2014 annual budget to support the plan (IDR 1.2 billion). WARSI has influenced the local government to give special attention to village communities.

In West Sumatra, WARSI seems to have been more successful in influencing the provincial government. On 20 March 2012, West Sumatra proposed to be selected as priority province for the national REDD+ program, clearly stipulating CBFM mainstreaming as their strategy. The proposal was approved in May 2012, and in response the province issued a REDD+ Provincial Strategy and Action

[64] Workshop with WARSI, Jambi, 12 November 2014

Plan (SRAP) in January 2013[65]. WARSI was part of the REDD+ Task Force that formulated the strategic planning, with Rainal Daus (WARSI program manager for IUCN's supported CBFM program) mentioned as one of the SRAP's authors[66]. In June 2012, West Sumatra also issued a social forestry development plan for 2012-2017 as well as a CBFM mainstreaming roadmap covering the same period. The roadmap stipulated the formation of a village forest task force at the provincial level responsible for accelerating the implementation of village forest schemes in West Sumatra. The document also mentioned WARSI as the only CSO working with the Provincial-level Watershed Management Bureau (BPDAS) to develop the task force[67]. It is clear that WARSI was instrumental in the issuance of both policies, and surely contributing in keeping both policies in-line with one another.

An external study conducted by ASB found that since procedures for the application and approval of village forest status involves the village, district, provincial and national government; only cases providing net benefits at each level will be approved[68]. The study further noted that there are still forces, especially at the national level, that do not support such schemes but that active interest of agencies involved in REDD implementation "tipped the balance in favour of supporting a village forest showcase"[69].

Despite these positive findings, it is hard to judge whether such achievements should be attributed to the support to WARSI from REDD+ related interventions or from the EA. It is clear that REDD+ is a factor behind policy influence. However, WARSI reported this achievement in their report to EA as well as in the evaluation workshop. WARSI explained that the presence of WARSI's CBFM efforts in West Sumatra (which were supported by IUCN) was a contributing factor to the selection of the province for REDD+ implementation. As discussed in under other indicators, WARSI considers the interventions to be complementary. For example, IUCN funds were used to lobby the West Sumatra government to attend international forums.

WARSI's joint advocacy with other EA grantees have successfully simplified the procedures to obtain village and community forest licenses. Ministry of Forestry Regulations No. 89/Menhut-II/2014 and No. 88/Menhut-II/2014 accommodate three of the four policy recommendations put forth by WARSI, namely: input on simplifying district and provincial procedures, CBFM work plan format simplification, and obligatory community facilitation. The proposed simplification in steps for area designation steps at the Ministerial level have not been taken up into these regulations.

## 4.6. Influence upon private sector agencies' policies, rules, regulations SPO

In Jambi province, WARSI have hypothetically blocked a number of private sector companies from gaining forest and land usage rights in at least 10 villages along the Batanghari watershed. However, technically the opportunity still exists if CBFM groups fail in protecting the village forest or if they become inactive. The area covered by village forests is just a tiny fraction compared to those given to corporations. As such it could be said that WARSI-led civil society resistance has not been considered a significant threat from the private sector's perspective. There are currently 25 village forests in Jambi covering only 54,978 hectares, while there are 853,430 hectares of forest land authorized to 18 corporations[70].

In West Sumatra the situation is more complicated as forest management by Nagari is based on customary rules and traditions. Until 2011, the private sector was actually never a serious threat for forest conservation because the Nagari Land customary law and resulting disputes are too complicated to deal with. But, the Ministry of Forestry issued a Decree No.304 that created chances for the private sector because it redefined some protected forest areas (including those proposed by the community as *Hutan Desa* into Limited Production Forests. WARSI has until so far successfully protected9 villages from private sector organisations. Also WARSI's success in convincing governments to mainstream CBFM also implies that they do not favour the involvement of the private sector.

# 5. Civil Society context

## 5.1 Coping Strategies

As the first nation to declare its commitment to voluntarily reducing carbon emissions, REDD+ may have changed the face of the Indonesian forestry policy environment. WARSI's program since 2009 is mainly geared to benefit from such change. For example, REDD+ encouraged the Indonesian Government to declare a forest moratorium via Presidential Instruction No.10/2011 which cited forest boundary conflict resolution as a priority[71]. In addition, Indonesia's anti-corruption agenda led by the Corruption Eradication Committee or KPK also encouraged forest conflict resolution as a priority[72]. As the CBFM scheme offers great prospects in resolving disputes over forest areas[73], WARSI has successfully utilized the momentum in 2012-2013 to lobby the West Sumatra province to mainstream CBFM in their forestry policy.

At the end of 2011, the Ministry of Forestry issued a Decree No.304 to amend the status of forest areas in West Sumatra. Under the decree, some protected forest areas in South Solok were redefined as Limited Production Forests. This includes an area proposed by the community as *Hutan Desa*. The change from protected forest to limited production forest is an opportunity for communities to apply for *Hutan Desa,* but also a threat because it has allowed six iron ore and gold mining companies to obtain exploration licenses[74]. As a reaction, WARSI increased their assistance in Solok and South Solok District from 2 to 9 villages. In Jambi, WARSI CBFM proposals in Sarolangun district had been stalled by the regent who favoured mining corporations. In response, WARSI lobbied the Forest Department to establish a CBFM Task Force to put pressure on the district leadership.

For better or worse, WARSI has capitalized on the increasing interests of international donors in forestry issues. WARSI seems to be aware of their advantageous position in being able to leverage their experience to gain funding support.

Report CDI-15-062

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.
