

Upgrading pig wastes to valuable fertilisers in the Hercules pig production system.

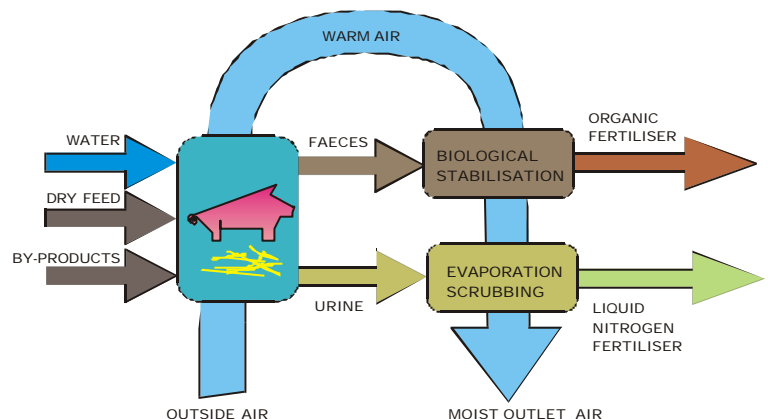

Hans Willers & Paul Hoeksma (Agrotechnology and Food Innovations)

Sustainable land use implies recycling of nutrients and reduction of nutrient losses.

Use of food industry residues in pig feeds and upgrading of pig wastes to organic fertilizers can contribute to sustainability.

Production of a concentrated liquid nitrogen fertilizer and a dry organic fertilizer in the Hercules pig production system creates opportunities for use of these fertilizers in a balanced fertilization plan.
