WAGENINGEN UR      CIVAS

Universiteit Utrecht

**Background**

- December 2003 → Avian Influenza H5N1 virus in Indonesia
- Poultry collector houses (PCF) → important role in AI transmission
- Risk factors of PCFs → Improvement of control measures

Universiteit Utrecht

**Objective**

- Objective:** to determine and quantify risk factors for the introduction or persistence of HPAI virus in PCFs in Jakarta
- Research Question:** What are risk factors of AI virus presence in poultry collecting facilities (PCFs) in Jakarta?
- Occurrence relation:** AI virus in PCFs= f (Risk factors)

Universiteit Utrecht

**Study design**

- Study design:** Prospective cohort study
- Study Domain:** Poultry Collecting Facilities (PCFs) in Jakarta, Indonesia
- Outcome:** Presence AI virus in PCFs

Universiteit Utrecht

## Study population

- **Inclusion criteria:**
  1. PCFs registered to the Provincial Livestock, Fisheries, and Marine Services Office of Jakarta province.
  2. PCFs had the ability to collect more than 100 chickens per day and had more than three suppliers
- **Measuring AI virus presence:**
  - Using sentinel birds (biosensor)
  - 7-8 per PCF

uu ~ Faculty of Veterinary Medicine

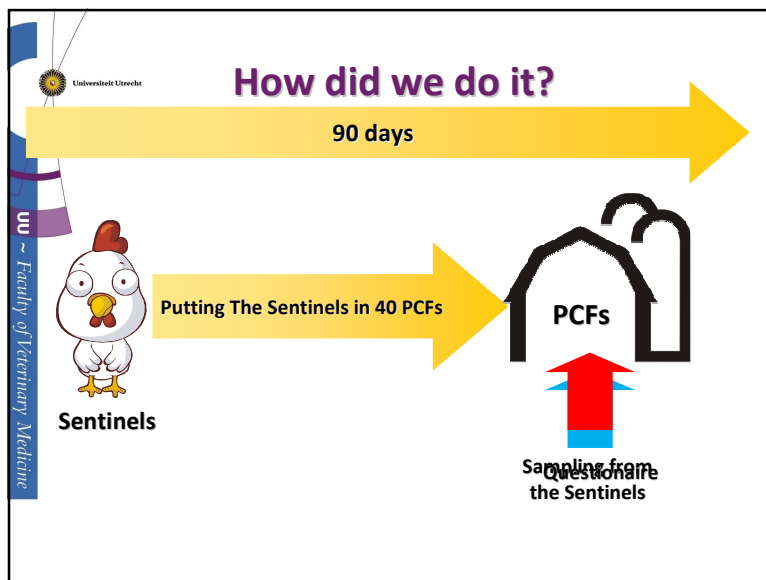

Universiteit Utrecht

## Determinants

- Questionnaires → 4 trained interviewers from CIVAS, accompanied by officers from each municipality in Jakarta
- Potential risk factors were identified based on the existing conditions of the PCFs related to the AI virus transmission in poultry
  1. Rearing management
  2. Biosecurity measurement
  3. Characteristics of poultry

uu ~ Faculty of Veterinary Medicine

Universiteit Utrecht

## Data analysis

- AI detection in dead/sick sentinels with PCR
- If AI is detected, the PCF is declared positive
- Survival analysis → Survival Regression → time to AI infection of sentinels
- Accelerate Failure Time Model with 7 distribution
- Risk factors with p-value less than 0.25 in the univariate analysis → multivariate analysis
- SPSS15 and R

## Risk factors

Risk Factors	Acceleration	95% CI		
	Factor (AF)	Exp(-γ)	lower	upper
Intercept	0.02	0.01	0.026	
<b>Cleaning House</b>				
Appropriate Cleaning the house vs Inappropriate cleaning the house <sup>*)</sup> .	<b>1.86</b>	1.19	2.90	
<b>Crate Materials</b>				
Non plastic crate vs Plastic Crate <sup>*)</sup>	<b>1.78</b>	1.14	2.78	
<b>Sick Poultry Managements</b>				
Sick Poultry leave it in the PCFs area vs. Sick Poultry taken out from the PCF <sup>*)</sup>	<b>2.59</b>	1.79	3.76	

Universiteit Utrecht

## Risk factors

Risk Factors	Acceleration Factor (AF)	95% CI	
<b>Poultry Type</b>			
Layer vs Broiler <sup>*)</sup>	<b>0.27</b>	0.15	0.50
Mix vs Broiler <sup>*)</sup>	0.68	0.44	1.05
<b>Bird Density</b>			
Medium density (5-10 bird m <sup>2</sup> ) vs Low density (0-5 bird m <sup>2</sup> ) <sup>*)</sup>	1.04	0.66	1.64
High density (>10 bird m <sup>2</sup> ) vs Low density (0-5 bird m <sup>2</sup> ) <sup>*)</sup>	<b>2.44</b>	1.69	3.54
Log (scale)	0.84	0.76	0.94
AIC	<b>1615.143</b>

Universiteit Utrecht

## Implications

- ✓ Current presence of AI in the provinces or breed most at risk
- ✓ Tools for improvement of control measures
- ✓ Change the management of PCFs

UU ~ Faculty of Veterinary Medicine

- Universiteit Utrecht
- ## Suggestions for control
- ✓ Separation of sick poultry
  - ✓ Density of PCFs
  - ✓ Use of plastic crates
  - ✓ Application of the GMP in PCFs
  - ✓ Further research on for example origin of AI, role of PCF in spread of AI to poultry farms, ...
