

Triacylglycerol (TAG) accumulation in microalgae

Guido Breuer, Packo Lamers, Dirk Martens,
René Draisma, René Wijffels

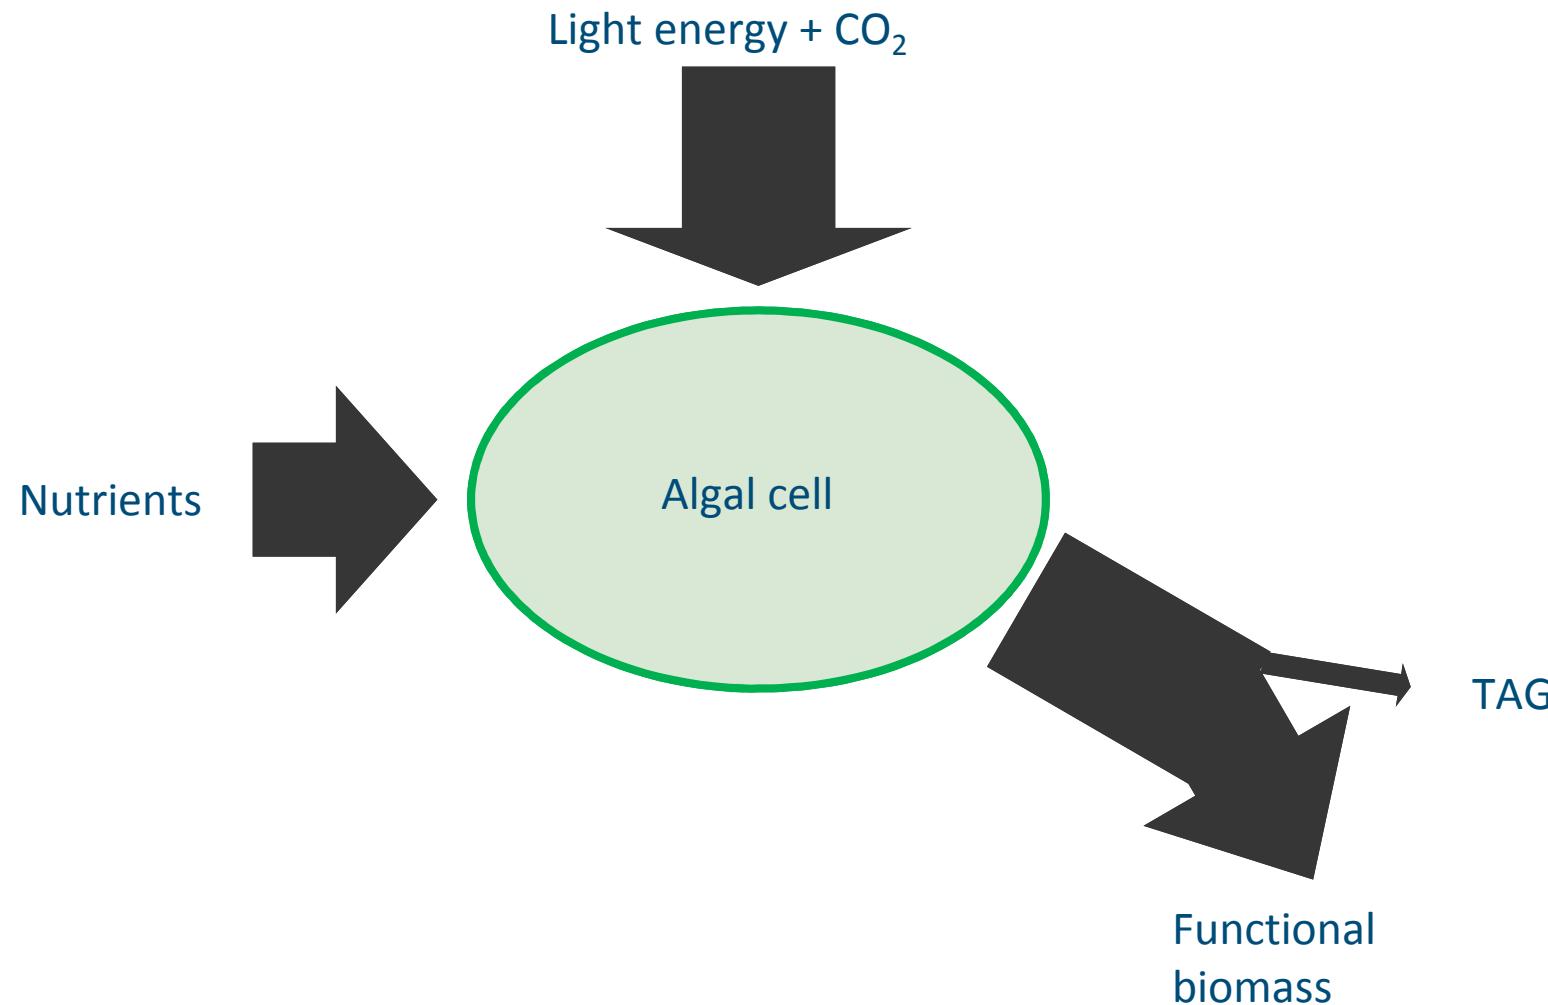

TAG production by microalgae

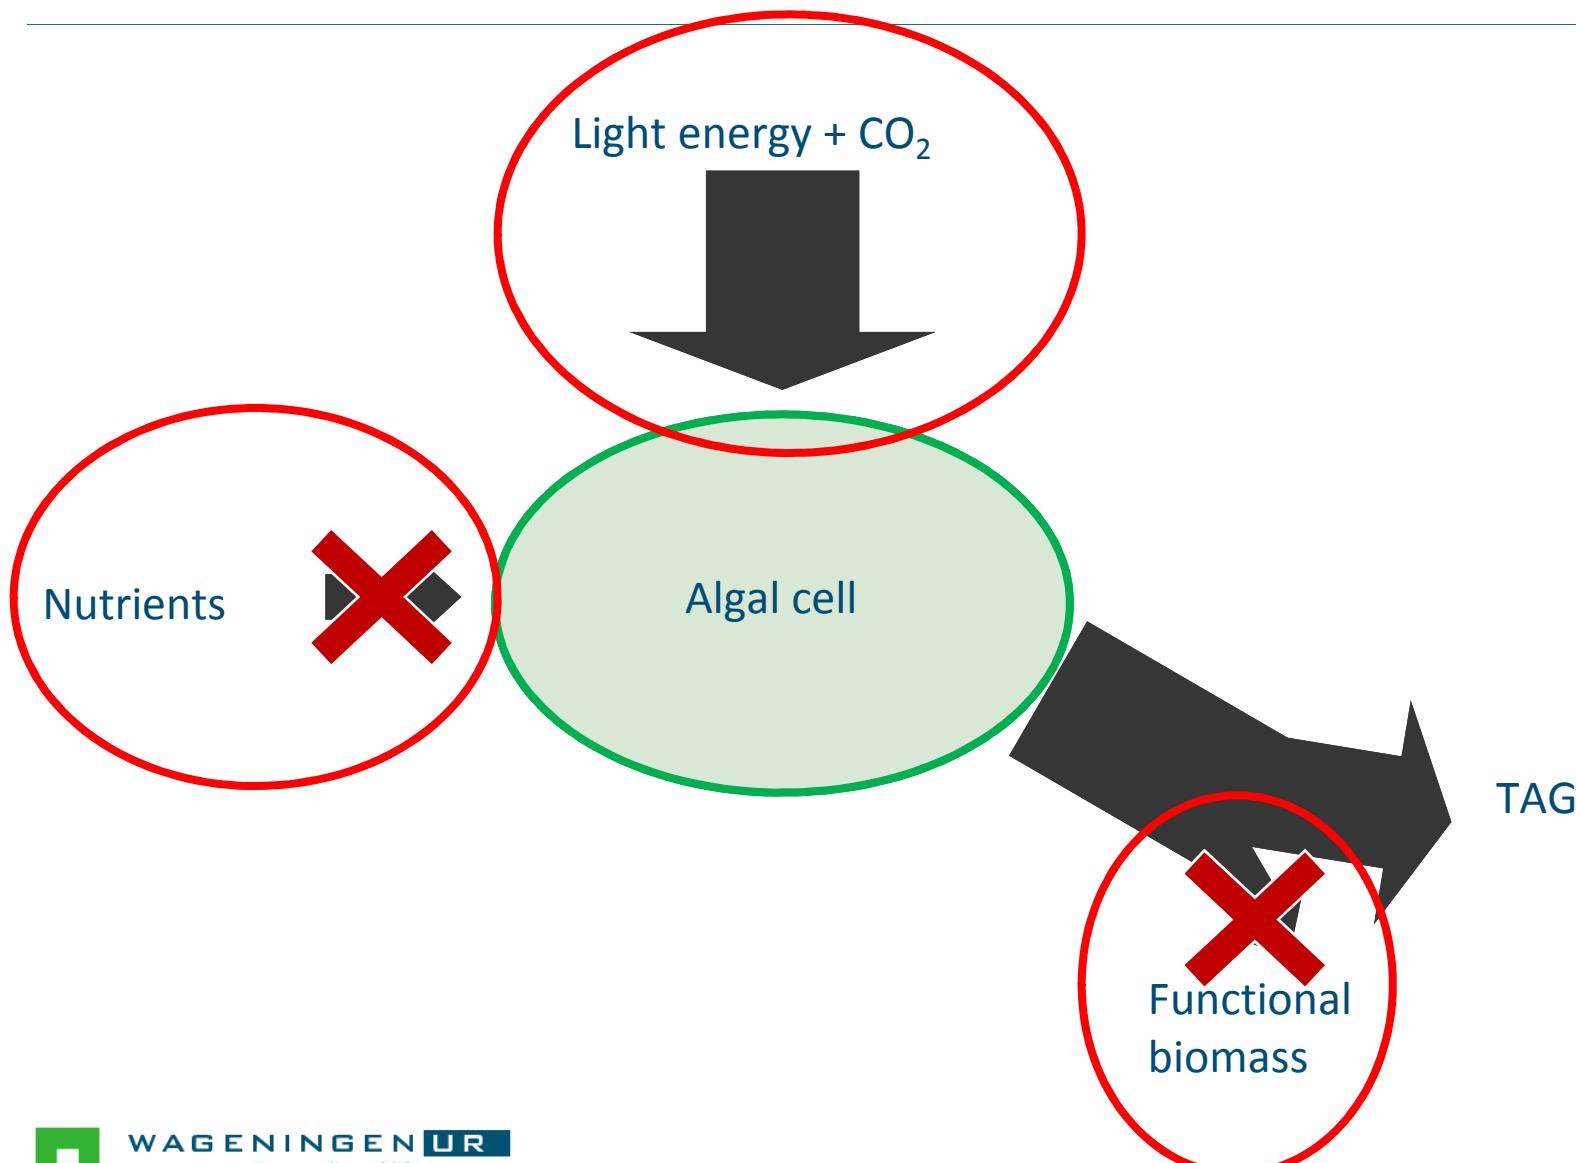

Omega-3 fatty acids are found in oily fish like salmon and flaxseed and canola oils

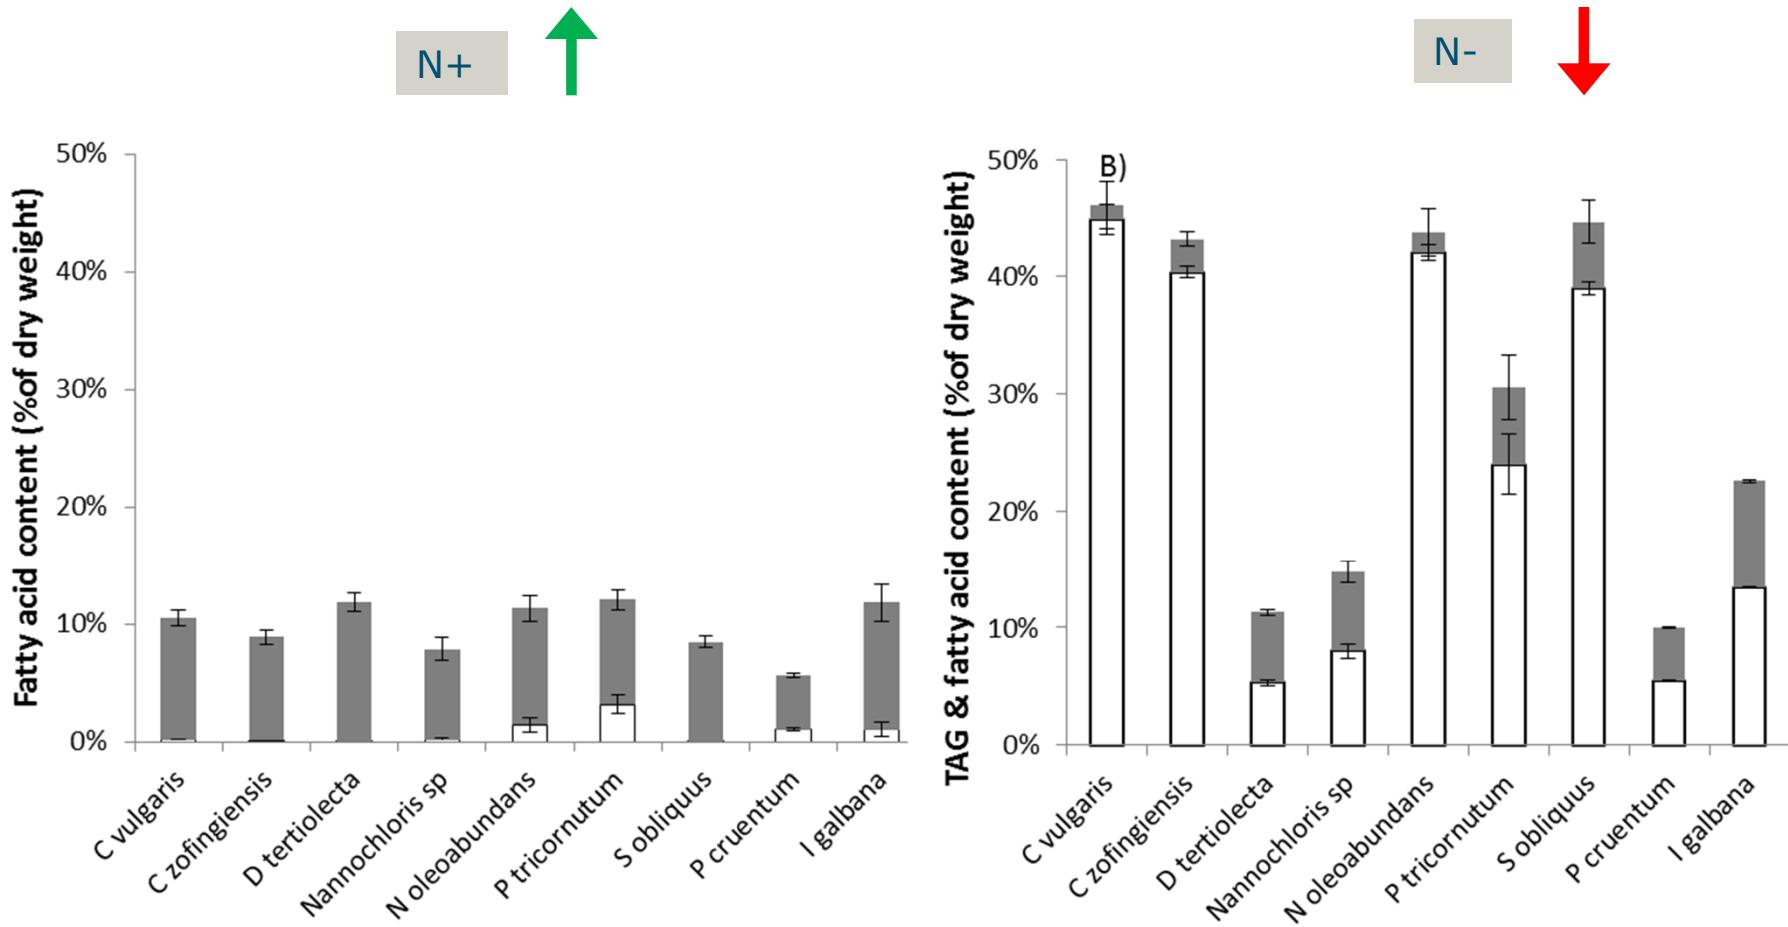

TAG accumulation: production strategy

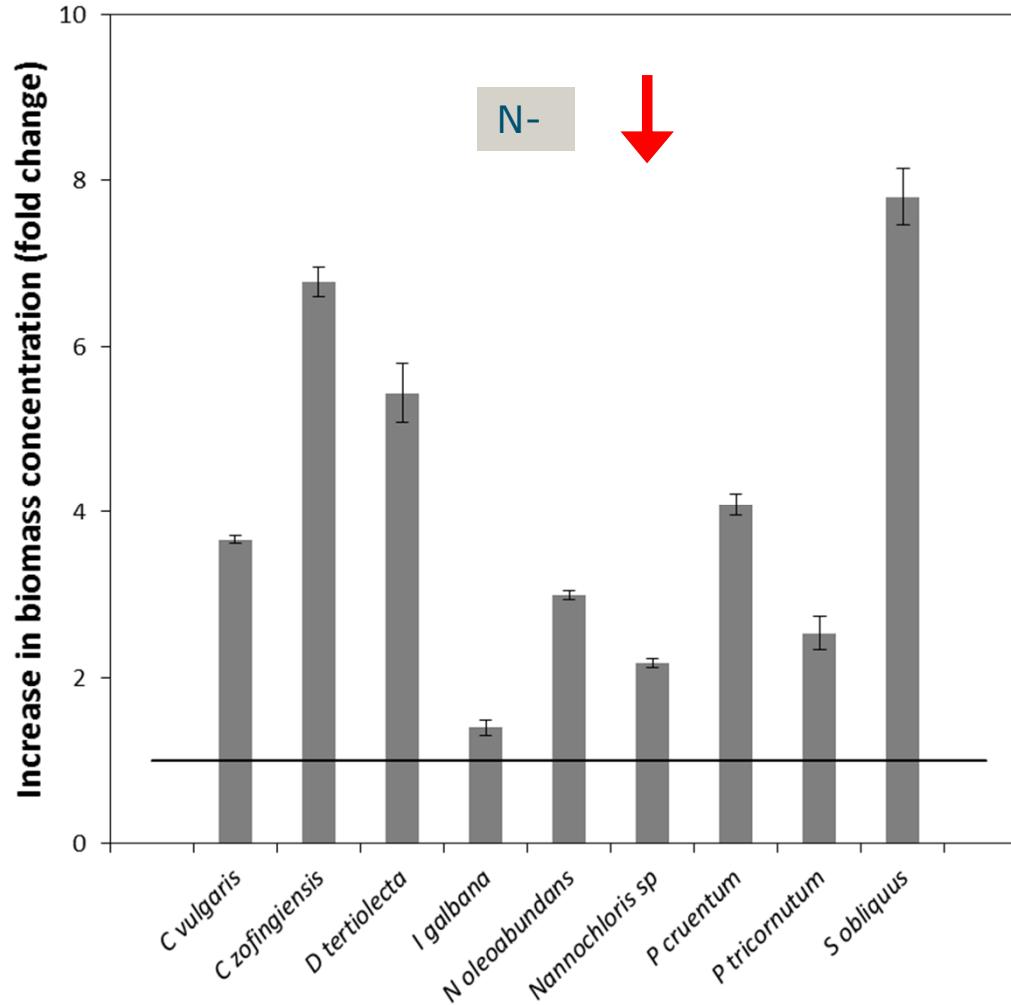

TAG accumulation: production strategy

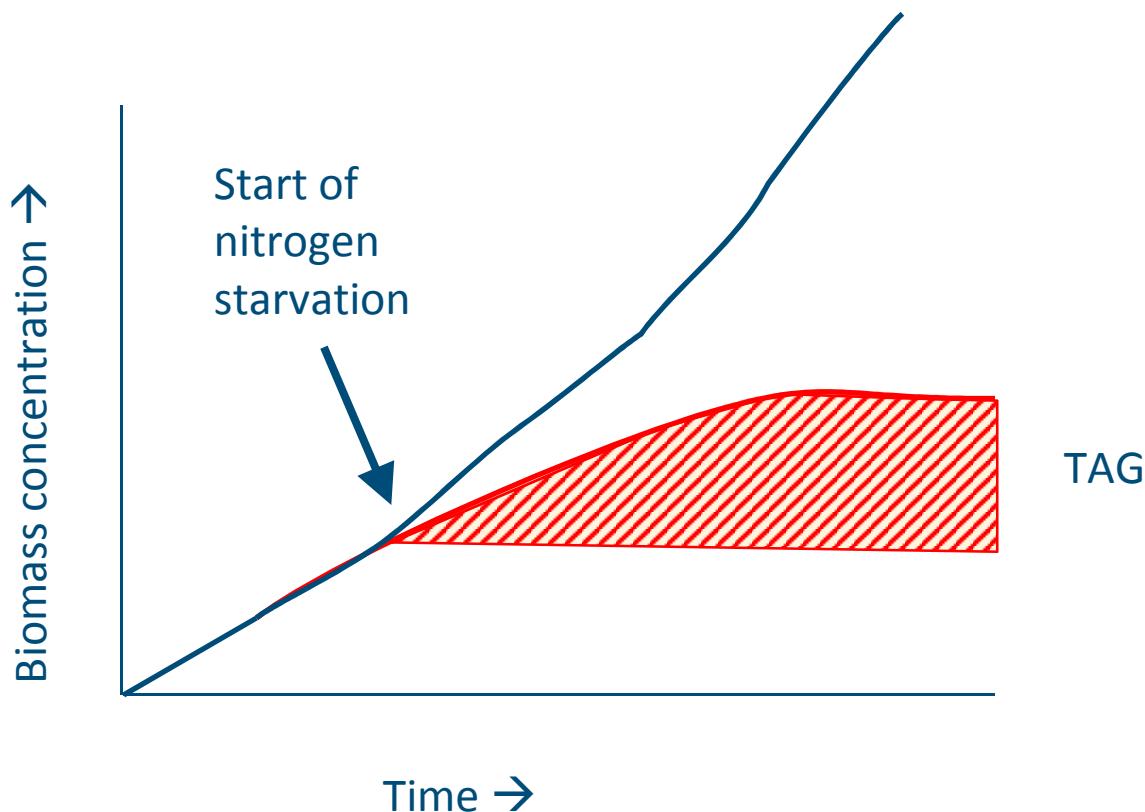

TAG accumulation

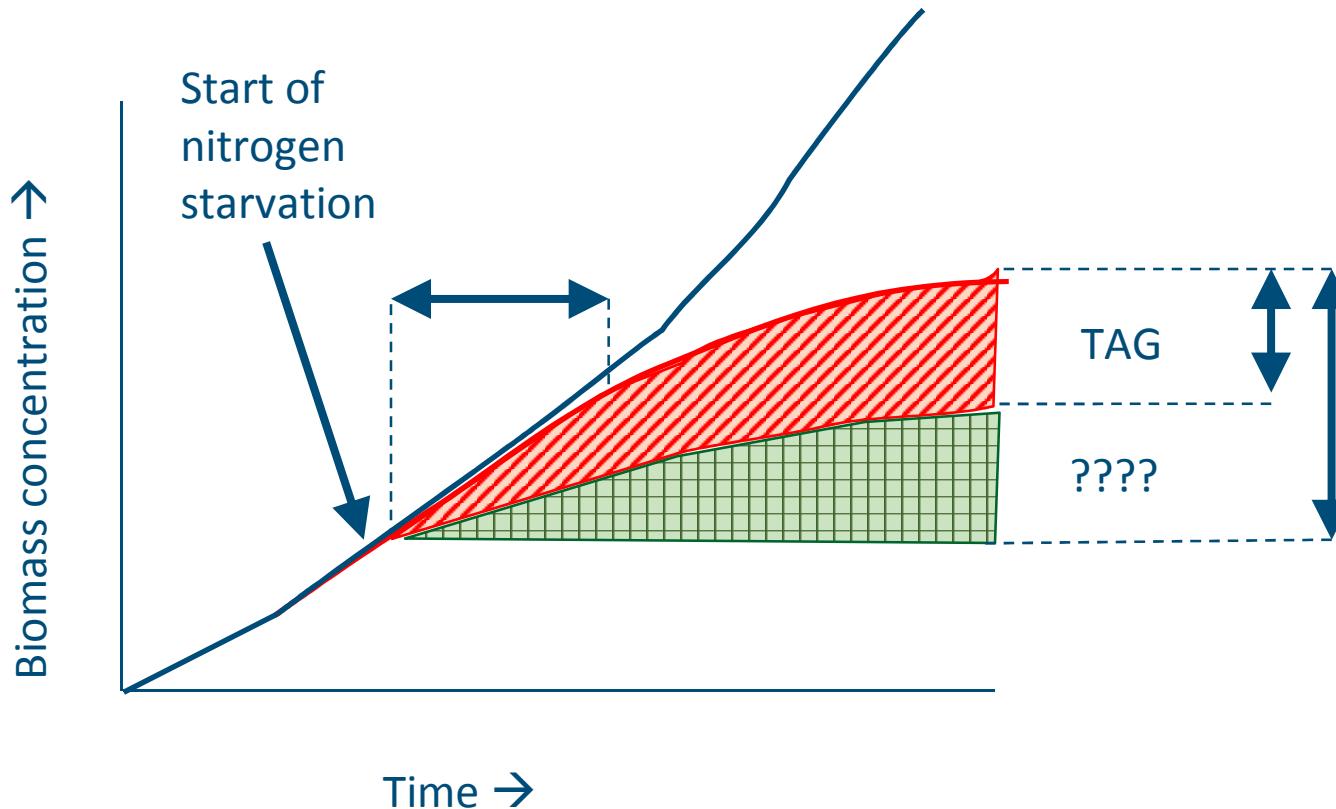

Increase in biomass

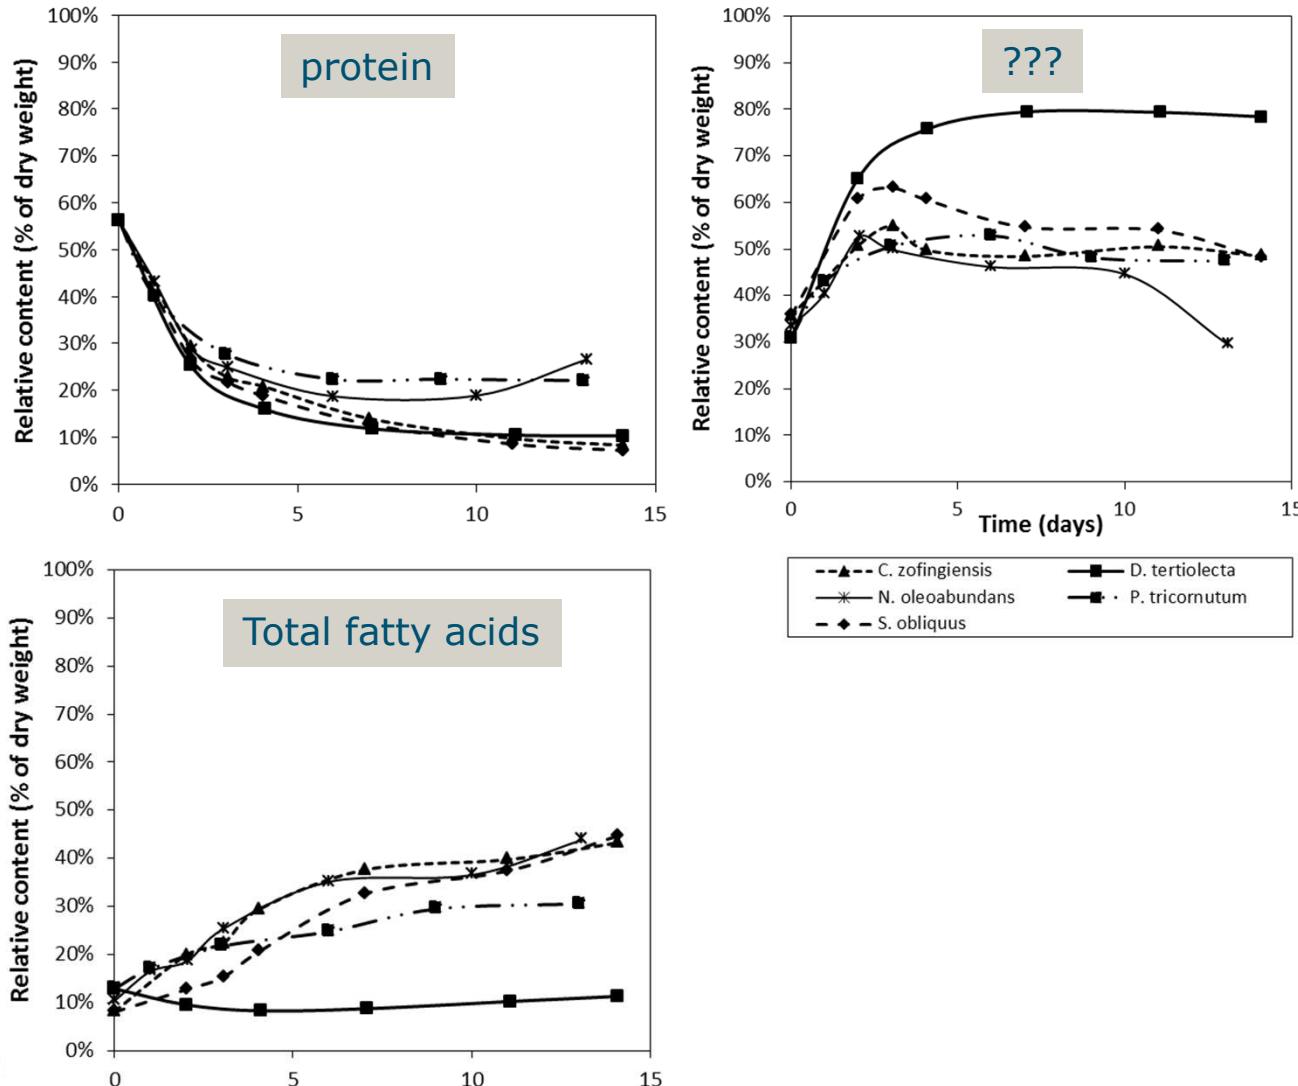

Original “intuitive” idea of TAG accumulation by nitrogen starvation

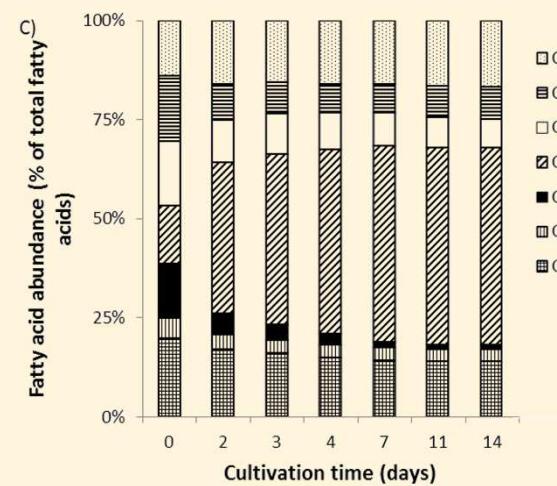

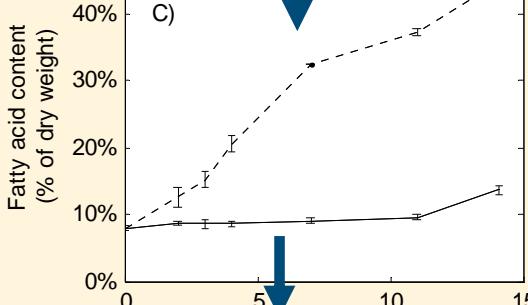

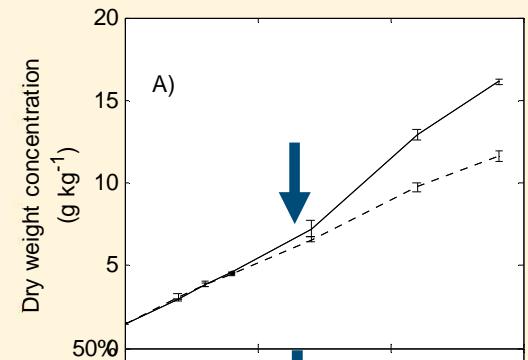

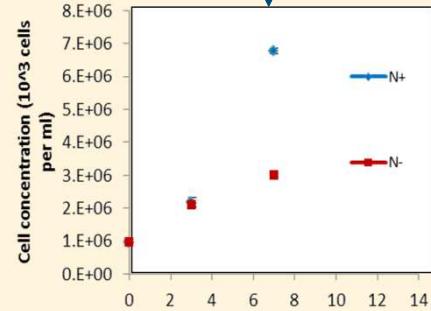

What actually happens

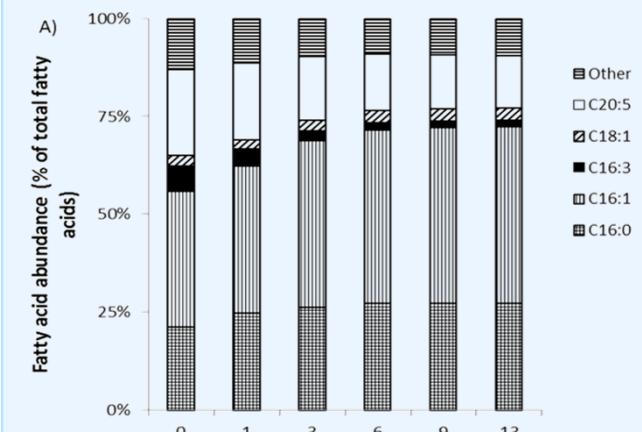

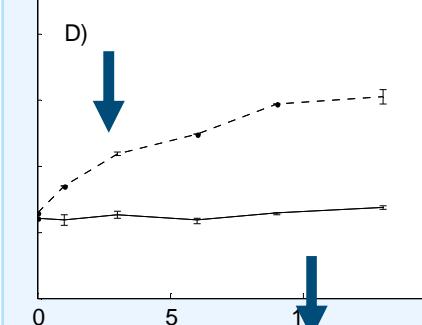

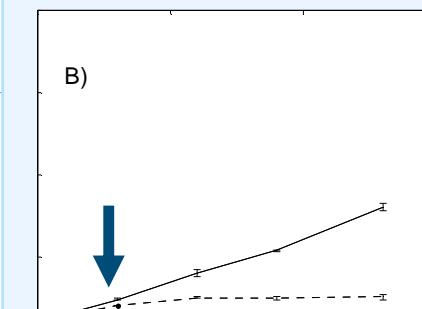

Dynamics of biomass composition

P. tricornutum

Conclusions

- Differences in TAG content and fatty acid composition between most promising species minor
- Main difference: impact of nitrogen starvation on amount and rate of biomass formation
- Time scale of biomass formation, lipid accumulation, and change in fatty acid composition upon nitrogen starvation different
- *Scenedesmus obliquus* and *Chlorella zofingiensis* most promising
