

Transparency in meat supply chains

An information system for tracking, tracing and awareness of meat (TTAM)

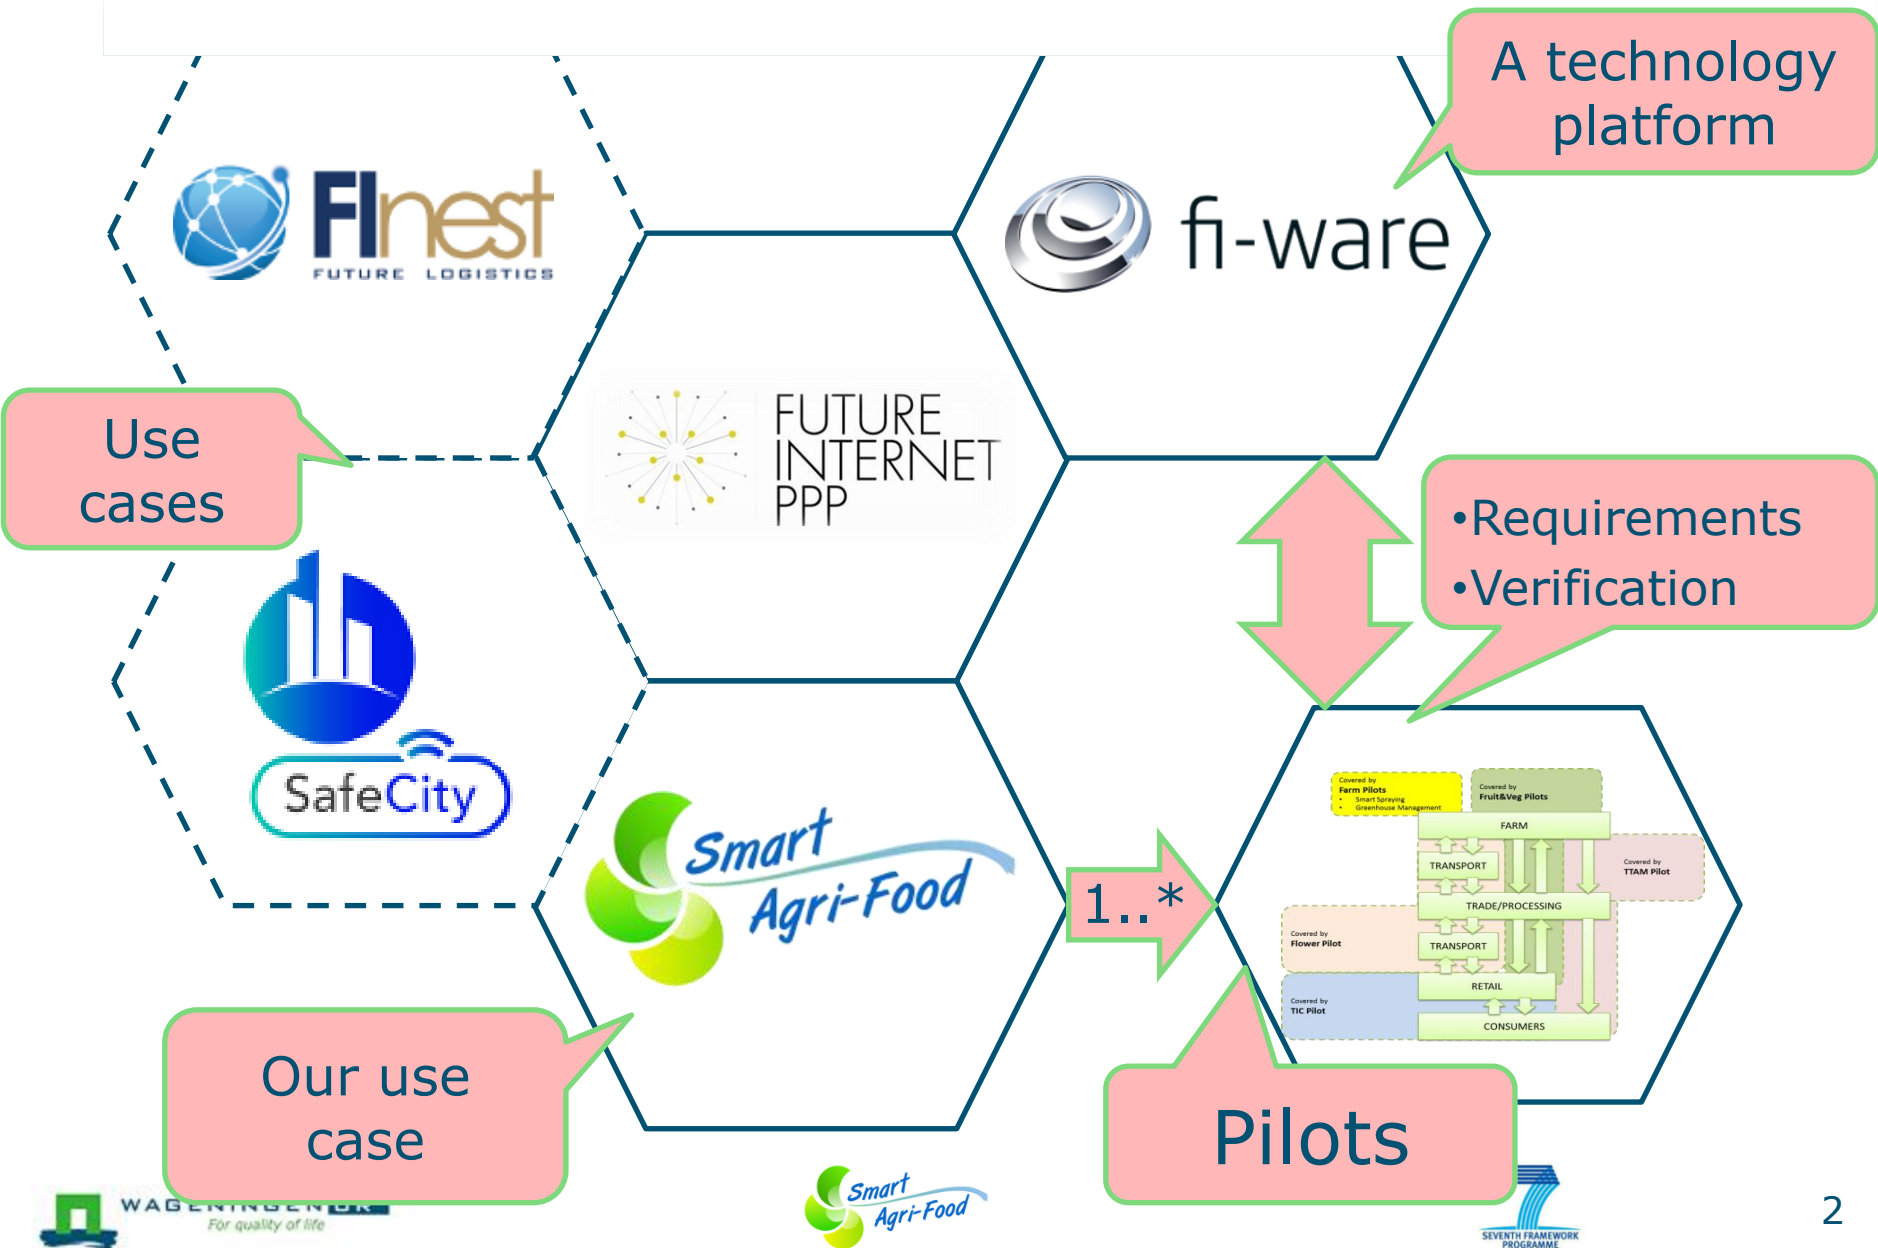

Kassahun, A., Hartog, R.J.M., Sadowski, T., Bartram. T., Kläser, S.,

Scholten, H., Schillings-Schmitz, A. and A. Beulens.

No risk to the public from horse meat, Downing Street insists.

Downing Street has been forced to row back on claims made by Owen Paterson, the Environment Secretary, that horse meat could be harmful to human health.

What we did... / design-oriented research

1: Requirements

- Consumer trends
- Regulations (EU)
- Understanding FI-WARE

2: Current state

- Tracking & tracing
- Consumer awareness

3: Design a new system

- Build on the existing
- Use/define generic enablers (GEs)

4: Validate

- Build a prototype
- Test at a retail

Requirement #1: Consumer trends

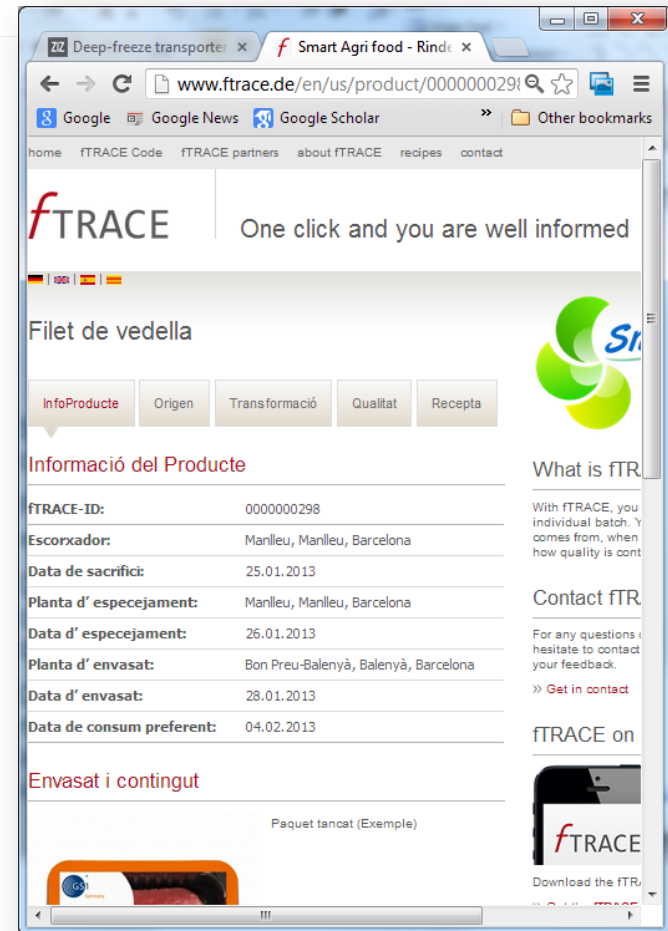

Smartphones as a shopping companion

=

[http://www.ftrace.de/
?h=GS&i=0000000298](http://www.ftrace.de/?h=GS&i=0000000298)

Requirement #2: regulations (EU)

Registration of bovine animals and origin of beef
Reg. No. 1760/2000

General Food Law: Reg. No. 178/2002

Hygiene rules, registration and approval req. Reg. No. 853/2004

Batch or consignment number
Reg. No. 931/2011.

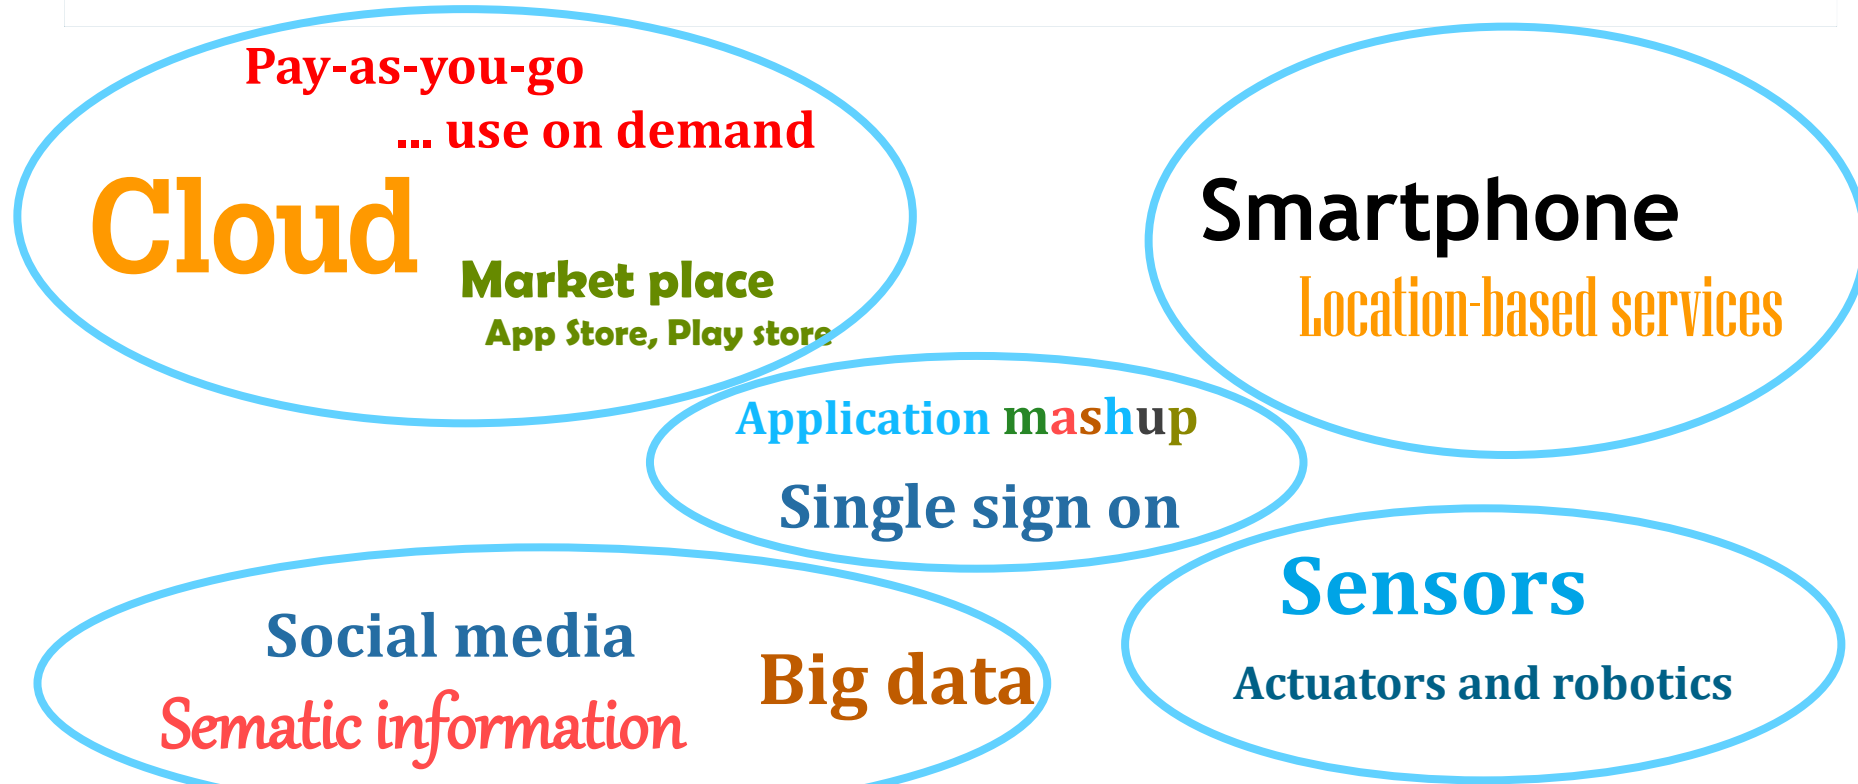

Provision food information to consumers (awareness):
Reg. No. 1169/2011

**Comes into
force in
2014**

Requirement #3: What is FI-Ware?

<http://catalogue.fi-ware.eu/enablers>

Cloud Hosting, Data/Context Management, Internet of Things (IoT), Applications/Services Ecosystems, Security and Interface to Networks and Devices (I2ND)

Current state: At retail

Recipe

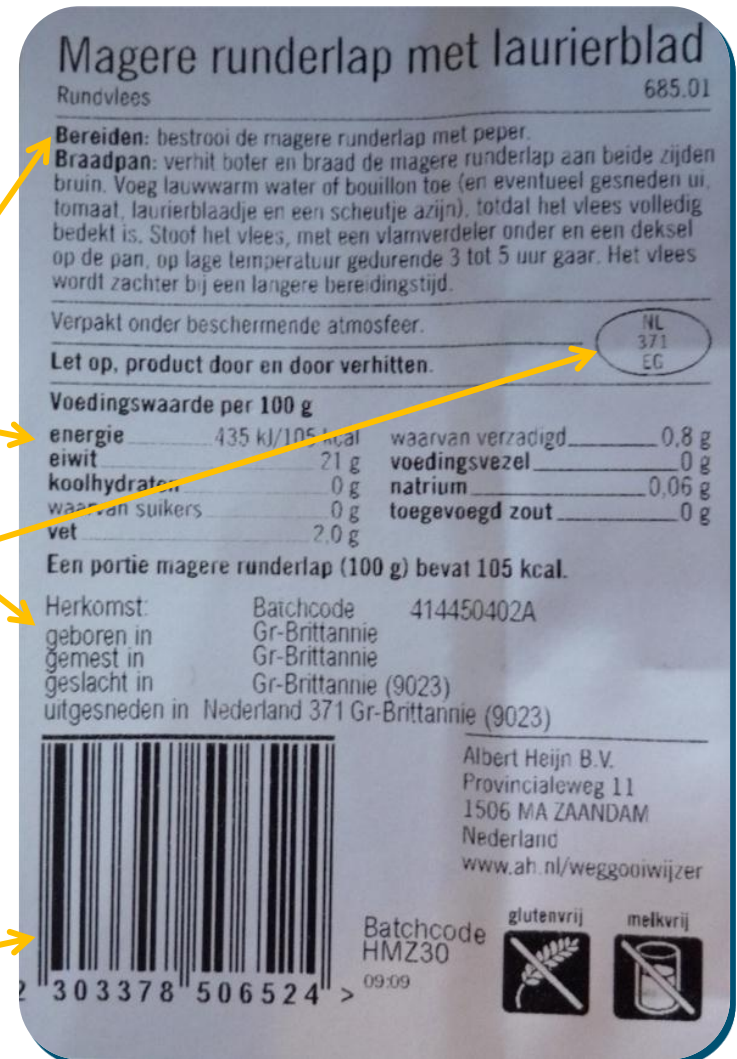

Nutritional
value

Origin

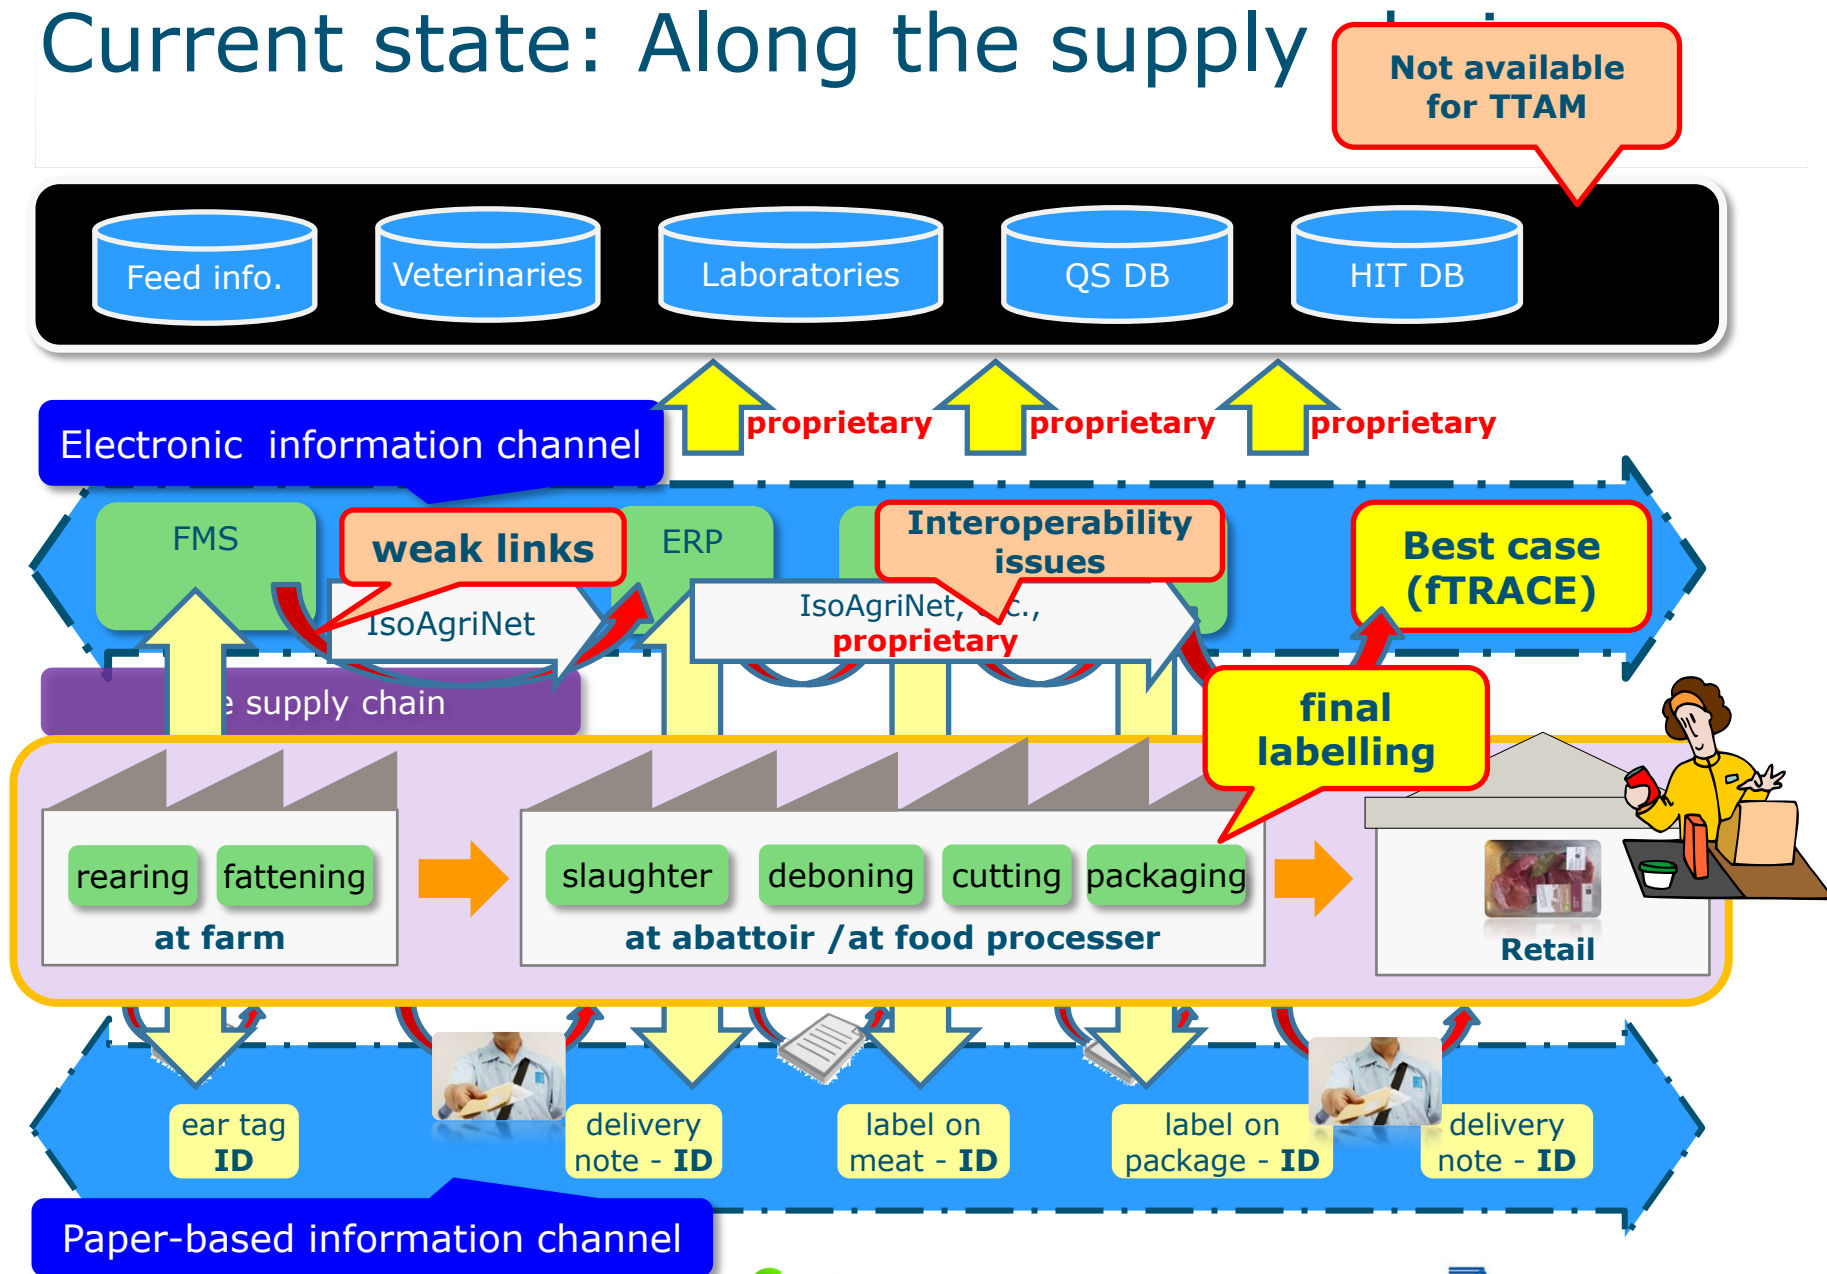

Weight &
price

Expiry date

Batch Nr.

Current state: Along the supply

One of the best examples of current transparency systems: fTRACE

Room for improvement in fTRACE

fTRACE		vs	What the new TTAM system should improve
1	A specific solution for a specific supply chain		Generic: any meat supply chain
2	Data gathered at the end		Data gathered from each supply chain actor
3	Trusted data		Certified data
4	Tracking and Tracing of large batches (country of origin)		Tracking and tracing of small batches (at animal or farm level)
5	Proprietary protocols for information exchange		Information exchange using standard protocols
6	Uses own components		Uses generic enablers

A trusted third party transparency provider

NEW: transparency provider

NEW: Actors provide data to transparency provider

EPCIS Repository

New: Use GS1 Standards

- Unique ID
- EPC, EPCIS, events

Proprietary protocols

Veterinaries

Laboratories

QS DB

HIT DB

tracking

EPCIS Repository

links & Interop. Issues

EPCIS Repository

ERP Repository

ERP Repository

ERP Repository

fTRACE)

tracing

OLD: Track & Trace – as strong as the weakest link

final labelling

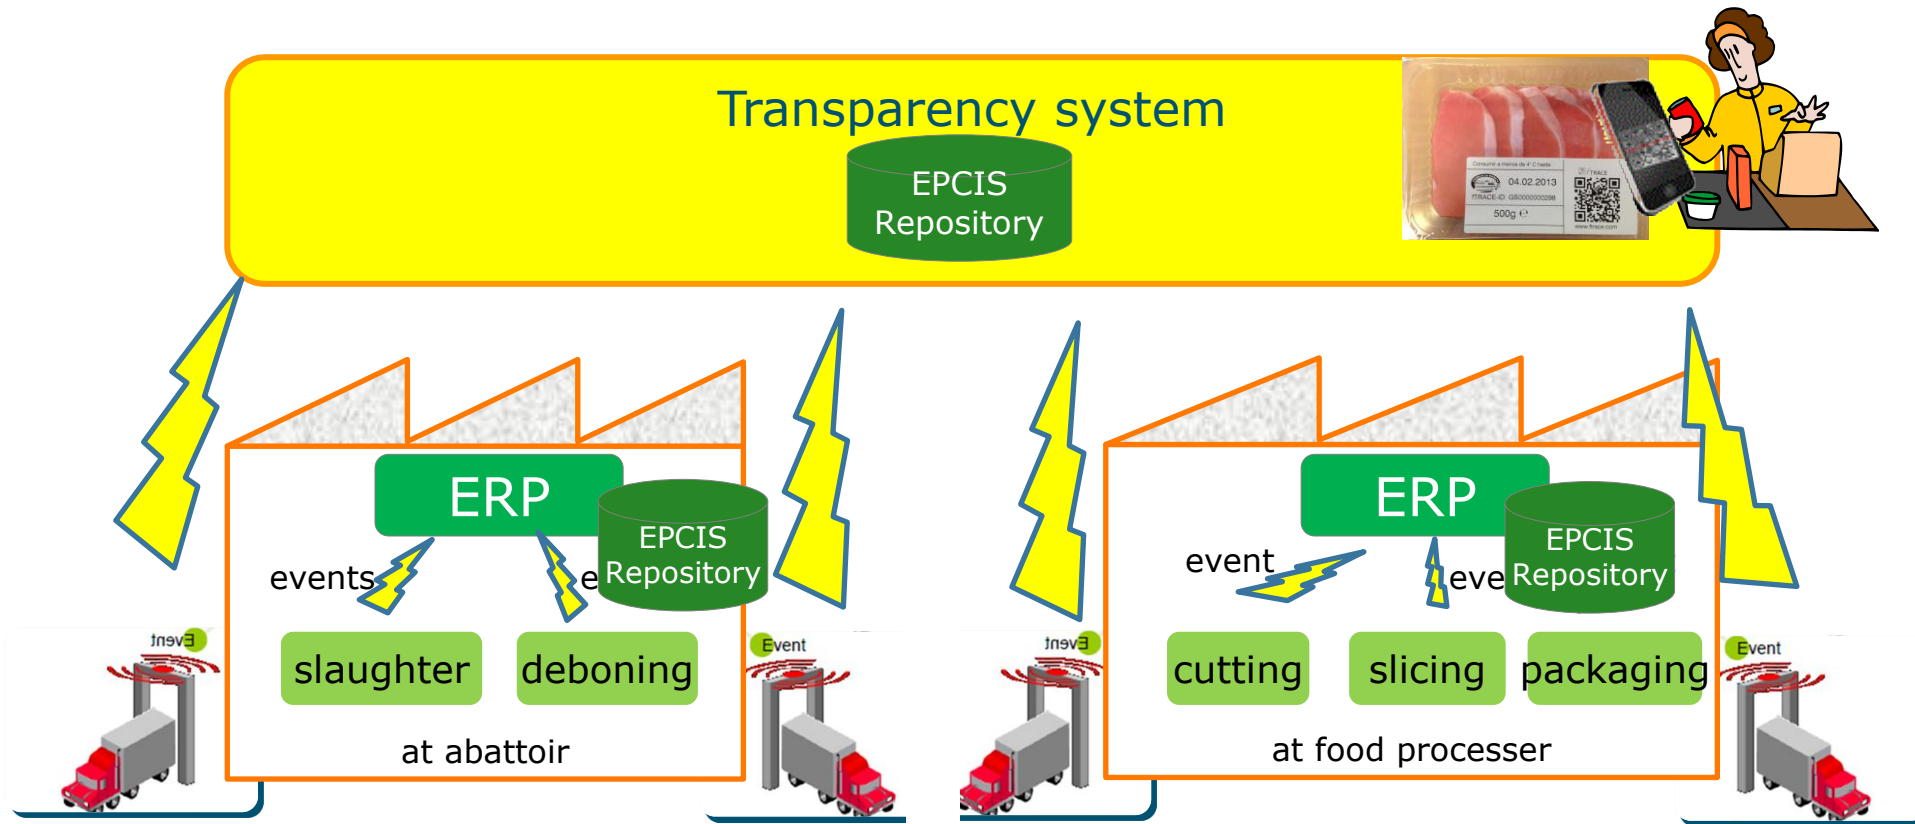

rearing fattening
at farm

slaughter deboning cutting packaging
at abattoir /at food processor

Wholesale/ Retail

OLD: A supply chain actor is also a transparency provider

GS1 Standards → EPCIS → FI-WARE

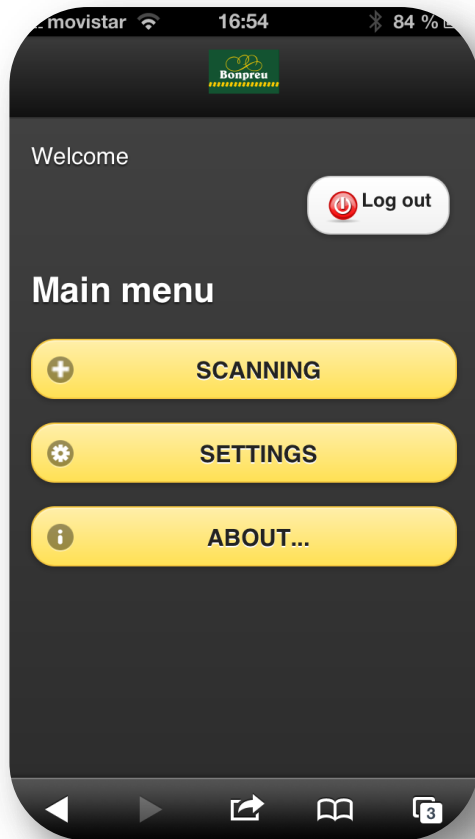

Relevant
FI-Ware GE's?

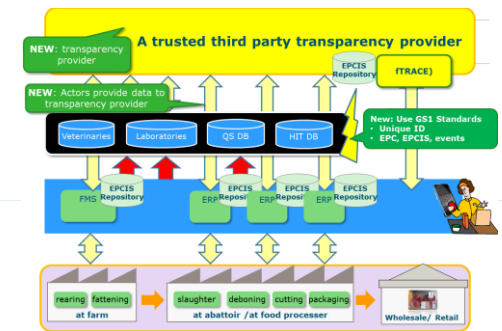

1. Publish-subscribe
2. Complex event processing
3. Security

EPCIS impl.
as a GE

Pre-work: development, testing

Summary

■ Current transparency systems:

- Supply chain specific solutions / in many occasions loss of information when a product passes from one to the next supply chain actor
- Transparency data available at the end of the chain
- Depends heavily on labelling and certification

■ The next generation transparency systems:

- Transparency provision as a service by a third party transparency provider (TPTP)
- TPTP collects data from supply chain actors
- TTAM system based on global (GS1) standards
- FI-WARE GE's need to support relevant standards

Thanks!
