

Climate change in the picture on local level

Pascal Zoetbrood, Tauw

Tauw

Local climate adaptation policy

→ Gap between the scientific and local policy domain which results in a **lack of instruments at the local level** to deal with the uncertainties of climate change.

→ The **complex social context** in which climate policymakers operate.

Tauw

Boundary work

Long term → new arrangements should be created and institutionalized to connect climate change science to the local policy domain

Short term → boundary institutions can do ‘pioneering work’ by unlocking scientific knowledge through decision making tools

Tauw

Climate change in the picture on local level

Added value of visualizations

1. Ammunition to start dialogue with other policy fields and relevant stakeholders
2. Enables policy makers to talk in clear images, just like the successful iconography used by Al Gore
