Biodiversity North Sea

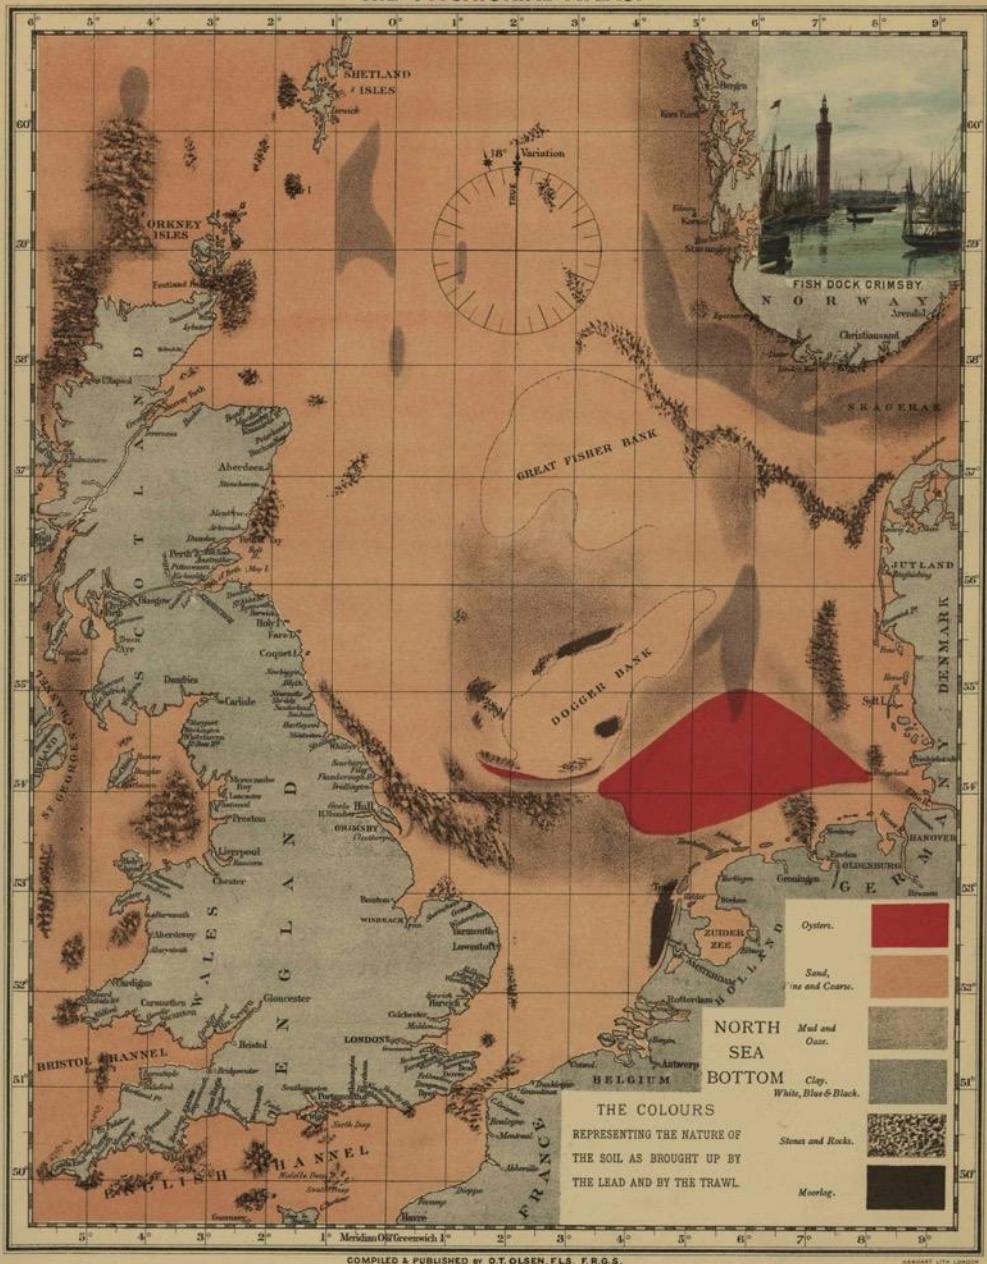

Benthos and fish:

- 50% soft bottom species
- 50% hard bottom species

THE PISCATORIAL ATLAS.

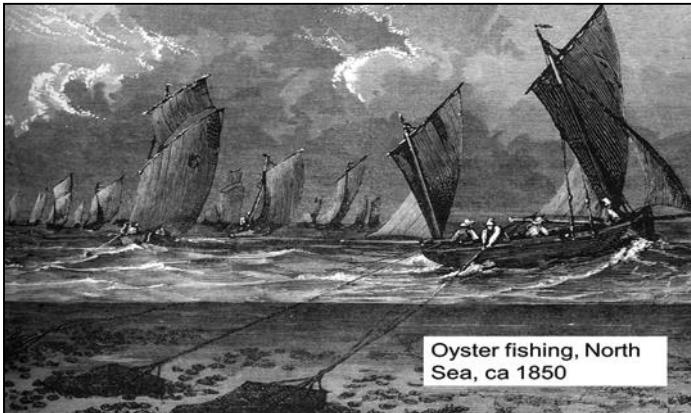

Oyster fishing, North
Sea, ca 1850

© udovandongen.com

Lost ecosystem and..

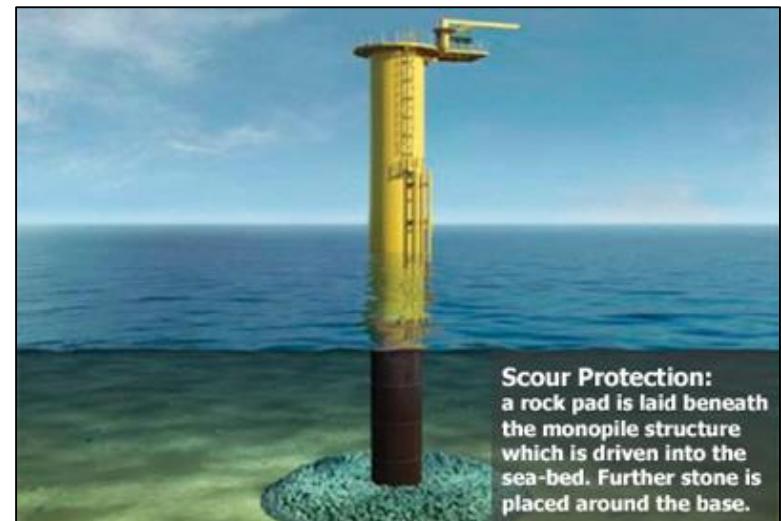

- Lost oysters
- Lost hard substrate biodiversity
- Lost ecosystem services
- Lost knowledge of how the North Sea was

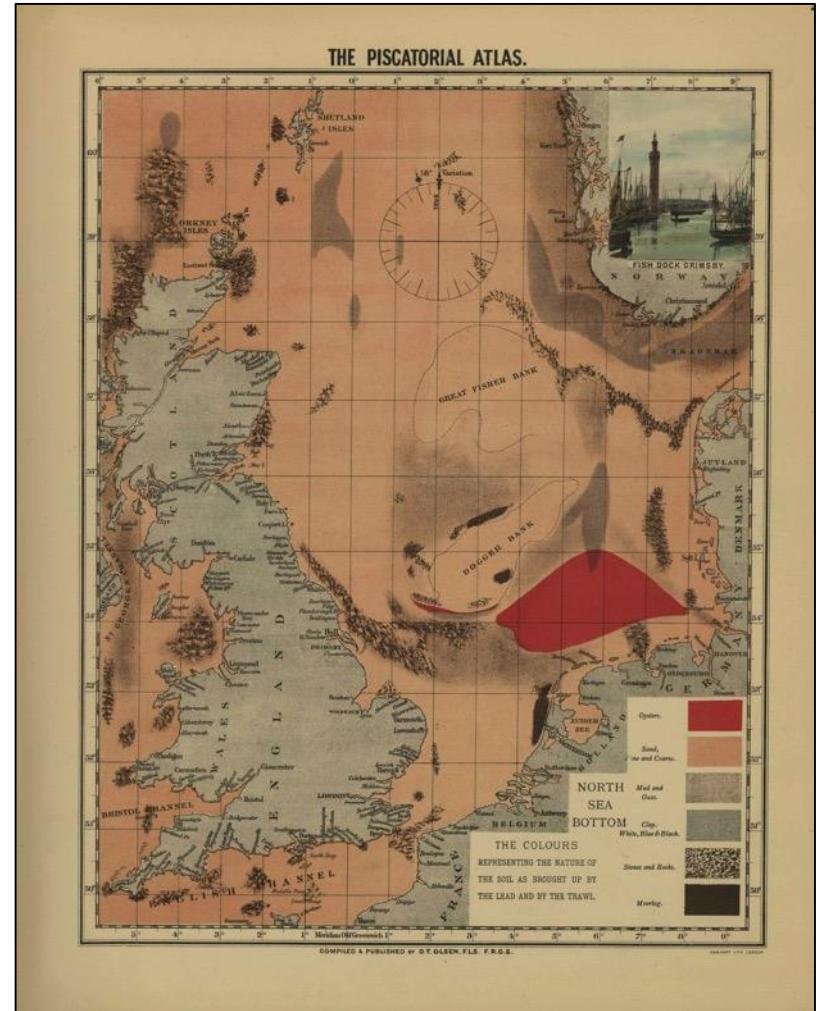

Restoration: The time is right

- First increase of native flat oyster population
- No real legal obstacles (Smaal et al., 2015)
- Locations of no disturbance
 - N2000
 - Offshore Wind farms
 - Marine strategy framework

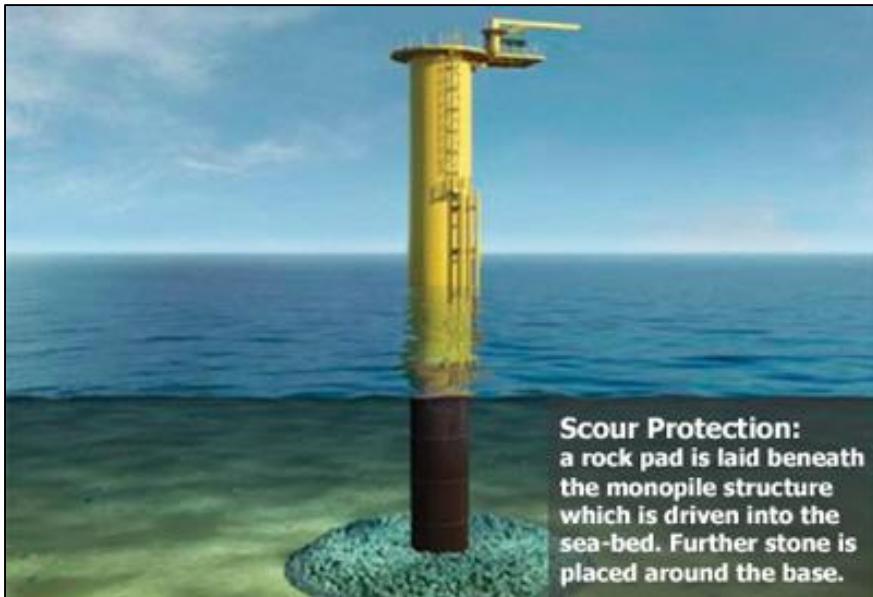

Approach

- Dream

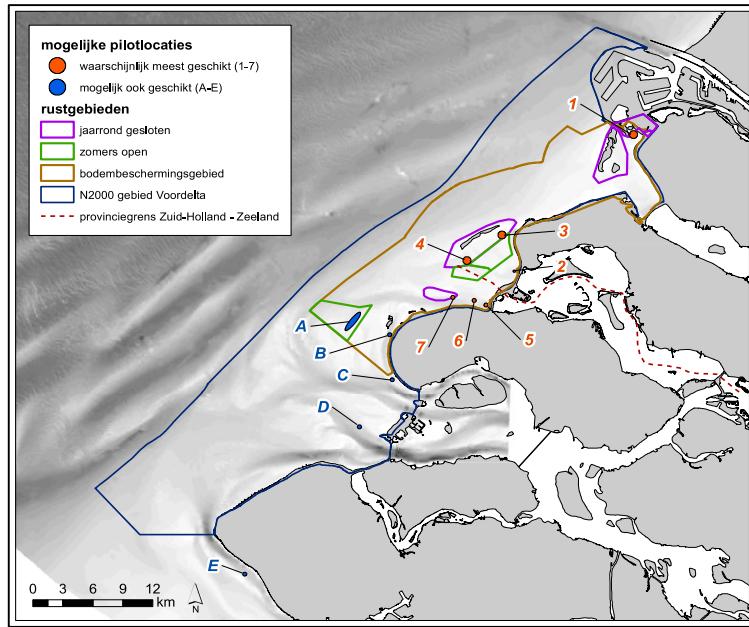

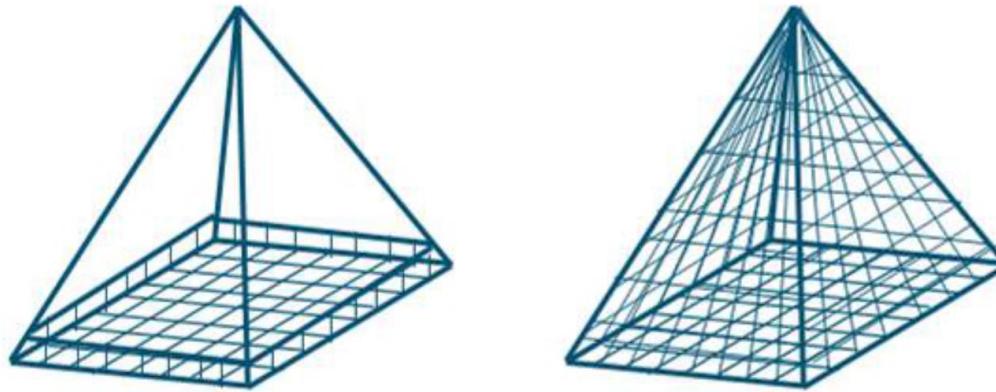

Approach

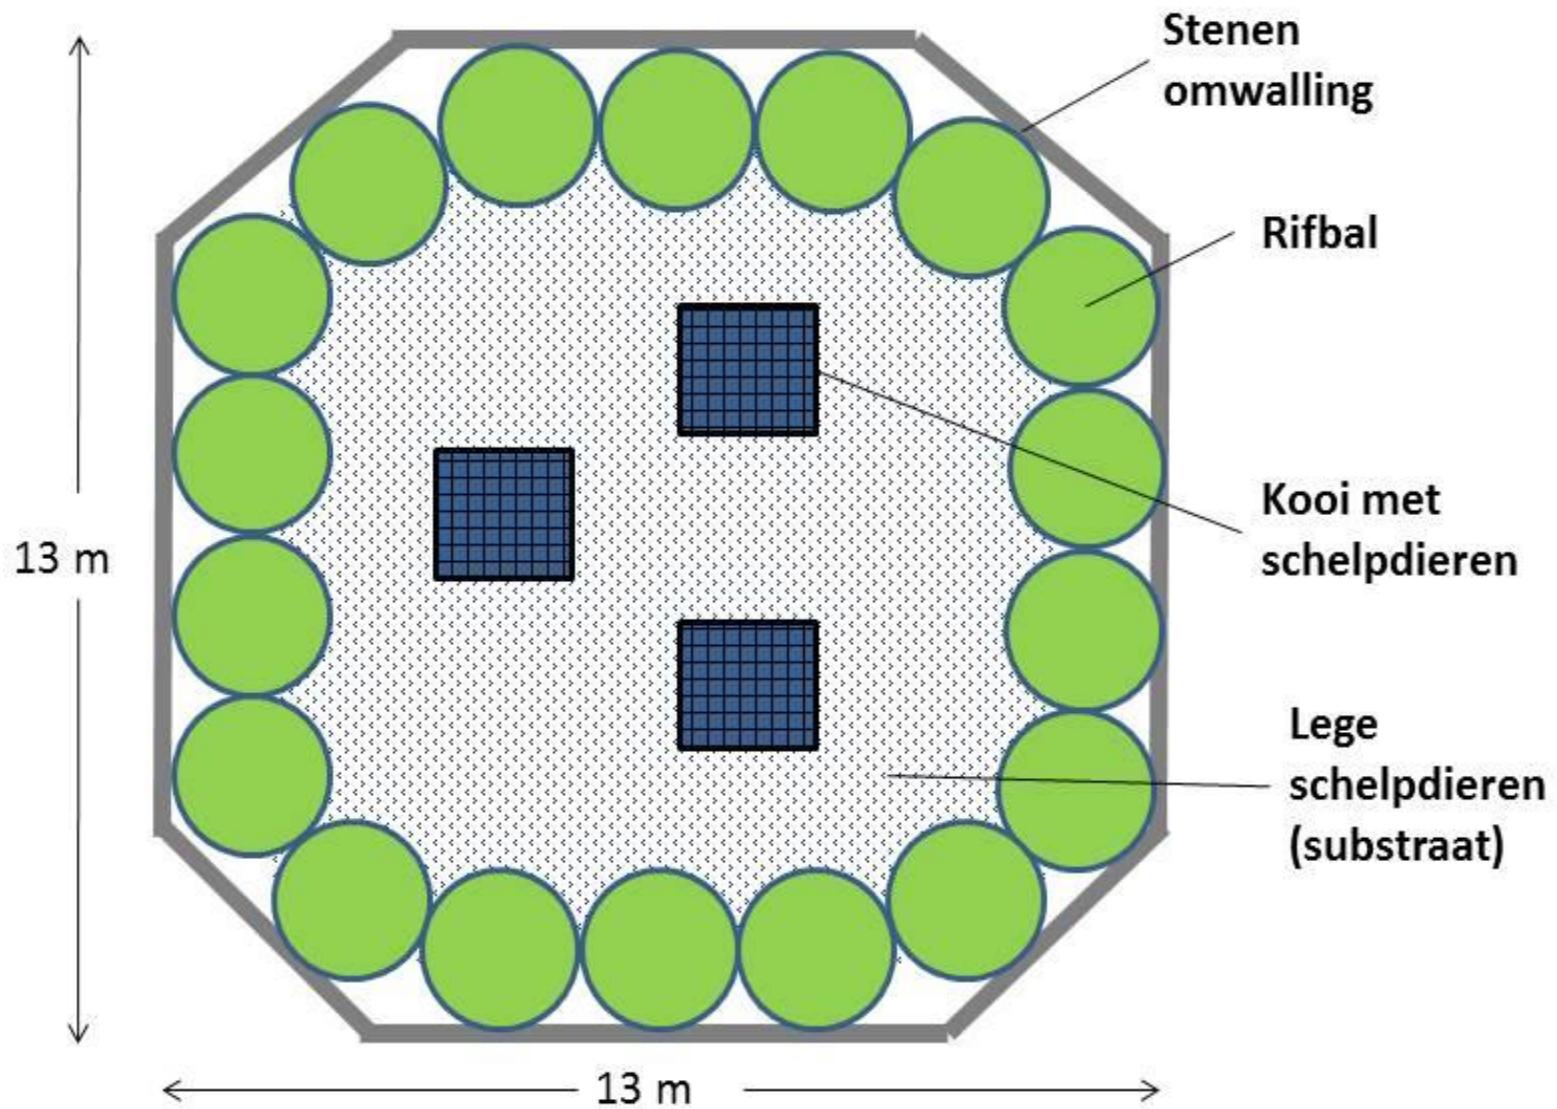

- Middle phase:
 - experiments offshore

Approach

- Start: Experiments near shore in Voordelta
 - Need to learn
 - High monitoring intensity
 - Close to shore = great advantage
 - Close to existing natural population

Partners

- NGO's (ARK & WWF)
- EZ
- I&M

Future partnerships:

- Fishing sector
- Energy sector

WWF / ARK
