

WATER INTEGRITY GLOBAL OUTLOOK 2016

Clean water needs clean governance

Global Water Partnership

WHAT IS WIGO 2016?

1. A demonstration of how integrity and good governance have become international and national priorities.
2. A review of how institutional fragmentation and corruption undermine resources and services.
3. An outline of approaches and tools that make improvements achievable
4. A set of recommendations for action by governments, sector actors, the private sector and civil society bodies.

THE CONTEXT

- **663 million people** lack access to improved drinking water sources globally.
- **100% increase of the global crop demand** from 2005 levels by 2050 for food and biofuel.
- **85% increase in water consumption** predicted in just the global energy sector by 2035
- **US\$ 6.7 trillion in investment** is required globally by 2050 to renew and upgrade water supply and sanitation infrastructure
- **Every 10% of investment lost to corruption** means annual losses in excess of US\$ 75 billion.

KEY MESSAGES

- Water integrity is a measure of the health of the sector; corruption is a disease that most harms children, women, the poor and the powerless.
- Corruption in the sector undermines the global ability to provide food, water and energy security for all, to achieve the SDGs and to adapt to climate change.
- The integrity challenge is to achieve transparency, accountability and participation in every aspect of water governance – coupled with anti-corruption measures.

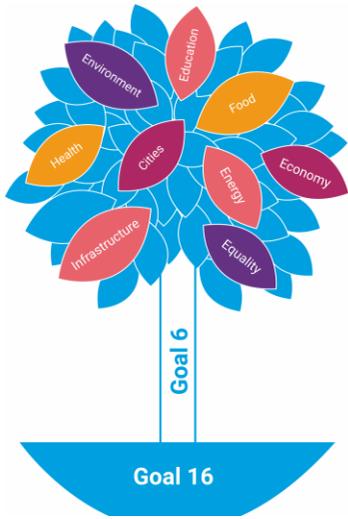

Water integrity is essential to:

- Protect and conserve water resources
- Deliver on global development commitments
- Address challenges and deliver on the human rights to water and sanitation, food production, sustainable energy and climate change.
- Achieve the SDGs with quality, equity and sustainability
- Give a voice to women and those particularly vulnerable to climate variability and disasters

SDGs

- Goal 16: peace, justice and strong institutions
- Goal 6: clean water and sanitation

THE INTEGRITY WALL
