## WOORD VOORAF

Het Landbouw-Economisch Instituut voert reeds gedurende vele jaren onderzoek uit naar de kwantitatieve opbrengsten van verschillende bloembolgewassen. Hiermede wordt een tweeledig doel gediend: enerzijds verschaffen dergelijke onderzoeken gegevens die in kostprijsberekeningen worden verwerkt, anderzijds zijn de resultaten van belang als voorlichtingsmateriaal.

In dit overzicht wordt verslag gedaan van het onderzoek naar de kwantitatieve opbrengsten van tulpebollen in het zandgebied van de kop van Noord-Holland (Breezand-Julianadorp-Zijpe) en het eiland Texel, over het teeltjaar 1968-1969.

De basisgegevens voor dit overzicht werden verzameld door Jos. Dreef, die tevens de verwerking, die mechanisch werd uitgevoerd, heeft voorbereid in samenwerking met J. van Nieuwkoop, J.F.R. Larsen en J. de Ruiter.

De gegevens van Uw bedrijf zijn opgenomen onder No. \_\_\_\_\_

Het Hoofd van de  
Afdeling Tuinbouw,

Den Haag, juli 1970

( Drs. R. Rijnveld )

## ALGEMENE TOELICHTING

### § 1. De deelnemende bedrijven

Aan dit onderzoek hebben in totaal 35 bedrijven deelgenomen, die tulpen telen op zandgronden in Noord-Holland. Van deze bedrijven bevonden zich er 9 op het eiland Texel, 16 in de Anna Paulownapolder (Breezand) en 10 in de polder Koegras en Zijpepolder.

Hoewel ernaar gestreefd wordt dat de deelnemende bedrijven een gemiddelde vormen van de in het gebied gevestigde bedrijven met tulpen-teelt, moet er rekening mee worden gehouden dat over het algemeen niet de slechtste bedrijven aan dit onderzoek deelnemen. De in dit overzicht vermelde oogstresultaten zullen daarom iets hoger kunnen zijn dan men op het gemiddelde bloembollenbedrijf in dit gebied mag verwachten.

### § 2. Samenstelling van het sortiment

In totaal zijn 266 waarnemingen verwerkt met een oppervlakte van 39,98 ha (= 27 985 RR2); dit betekent bijna 0,15 ha (= 105 RR2) per waarneming.

De waarnemingen hebben betrekking op 128 tulpecultivars. Voor een nader inzicht in het "deelnemende" sortiment wordt naar bijlage 1 verwezen.

### § 3. Verwerking der gegevens

De oogst van een gewas tulpen kan niet uitsluitend worden beoordeeld op basis van het aantal bollen dat van een bepaalde partij is geraapt en verkocht. Van belang is tevens hoeveel plantgoed daarvoor is opgezet en hoe dat plantgoed was samengesteld. Voorts is van belang hoeveel plantgoed er is overgehouden om de teelt voort te zetten en hoe dat plantgoed op zijn beurt was samengesteld. Eerst dan is een juiste beoordeling van het oogstresultaat mogelijk.

In dit overzicht zijn alle opbrengstresultaten aangegeven per are. Hiermede wordt gebroken met de traditie als oppervlaktemaat de vierkante Rijnlandse roe te gebruiken. Dit zal aanvankelijk nog op enkele bezwaren stuiten; om hieraan tegemoet te komen wordt bij enkele gegevens tevens nog het cijfer per RR2 vermeld.

In bijlage 2 zijn de resultaten vermeld van de uitgevoerde bewerkingen per waarneming. Behalve de opplant (in kg) zijn hier weergegeven de verhandelde oogst en het overgehouden, voor het volgende teeltjaar bestemde plantgoed. De verhandelde oogst is uitgedrukt in aantallen stuks bollen in de ziftmaten 12/ op, 11-12 en 10-11 cm (exportkwaliteit); verkocht

plantgoed is uitgedrukt in kilogrammen. Verhandelde bollen, die niet aan de exporteisen voldoen ("kale" of 2e soort bollen) zijn omgerekend in kilogrammen.

Het overgehouden plantgoed is wederom uitgedrukt in kilogrammen. Tevens is hierbij aangegeven met welk percentage de ermee beplante oppervlakte is uitgebreid of ingekrompen.

Voorts is van alle waarnemingen nog het aanwaspercentage vermeld. Dit percentage wordt als volgt berekend:

1. leverbaar (aantal stuks omgerekend in kg)
2. kale bollen in kg
3. plantgoed in kg (verkocht of weer geplant)
- + A. totale oogst in kg
- B. opplant vorig jaar, in kg
- C. aanwas (A - B)

$$\text{Aanwaspercentage} = \frac{A - B}{B} \times 100\%$$

Overigens moet men bij de beoordeling van de verschillende aanwaspercentages steeds rekening houden met de uitgeplante hoeveelheid. Een partij, waarvan 70 kg (2 mand) per are is uitgeplant zal bij gelijke raap een belangrijk hogere aanwas te zien geven dan een partij waarvan per are 105 kg (3 mand) is opgeplant.

Van cultivars, waarvan 5 of meer waarnemingen beschikbaar waren is een gemiddelde berekend. Het betreft hier een zogenaamd gewogen gemiddelde: de raapcijfers zijn "gewogen" met de beteelde oppervlakte.

Ook per groep is een "gewogen" gemiddelde berekend, evenals voor het totaal van alle waarnemingen.

De gemiddelde van de groepen zijn in tabel 1 opgenomen, waarin tevens het totaalcijfer voor alle waarnemingen is vermeld (zie blz. 9).

In bijlage 3 zijn per deelnemend bedrijf enkele aantekeningen betreffende de toegepaste teeltwijze bijeengebracht.

Van de in het onderzoek verwerkte 252 waarnemingen (exclusief de Botanische tulpen), was het grootste deel machinaal geplant en machinaal gerooid, en wel op de volgende wijze:

203 waarnemingen d.m.v. 4-rijige plantmachine en machinaal gerooid;

24 waarnemingen d.m.v. 2-rijige plantmachine en machinaal gerooid;

3 waarnemingen d.m.v. 1-rijige plantmachine en machinaal gerooid.

Bij de overige 22 waarnemingen werd 19 maal halfmachinaal geplant met behulp van drukrollen en machinaal gerooid, 3 maal werd ingeploeft waarbij 1 maal machinaal werd gerooid en 2 maal uitgeploeft.

1) De in deze tabellen voorkomende kolom "plantgoed e.a." heeft betrekking op verkocht of ingeleverd plantgoed, en op eventueel verkochte kale bollen of tweede soort, omgerekend in kilogrammen.

§ 4. Vergelijkende cijfers van het onderzoek over de laatste drie jaar (1967 t/m 1969) 1)

In tabel 2 zijn de gemiddelde oogstresultaten van de onderscheiden teeltgebieden van de laatste drie jaar samengevat. (Zie bldz. 10)

In deze cijfers valt allereerst op de grote verschillen in hoeveelheid gebruikt plantgoed. In Friesland werd voor oogst 1969 74 kg plantgoed per are gebruikt (10,6 ha per RR2), en in de "Zuid" 125 kg per are (17,9 kg per RR2).

Met andere woorden in Friesland heeft men het oogstresultaat bereikt met 59% van de in de "Zuid" gebruikte hoeveelheid plantgoed.

Wat betreft de aantallen stuks leverbaar kan worden vastgesteld, dat in alle gebieden, met uitzondering van Breezand, de verkoop van ziftmaat 10 weer is toegenomen. De totale raap is, met uitzondering van de gebieden Noordoostpolder en de "Zuid" (waar een toename was t.o.v. 1968) afgenomen. Dit is te wijten aan het lagere aantal stuks in de maat 12/-, wat slechts ten dele gecompenseerd wordt in een groter aantal 11/12.

Van de plantgoedooft is in alle gebieden sprake van een afname t.o.v. 1968; in het aanwaspercentage komt deze totale achteruitgang het sterkst tot uitdrukking.

De grootste achteruitgang is in Friesland met 25 punten, vervolgens Breezand met 17 punten en de kleinste achteruitgang werd in West-Friesland waargenomen nl. 4 punten.

In tabel 3 zijn voor oogst 1969 de verschillen weergegeven t.o.v. 1968 (alles per are).

Tabel 3. Oogst 1969 t.o.v. oogst 1968

+ meer ) dan in 1968  
- minder )

- 1) Door overschakeling van RR2 op are is, in verband met de gevolgde wijze van berekening, slechts met de afgelopen drie jaar gewerkt, omdat van de daarvoor liggende jaren de uitkomsten niet in decimalen beschikbaar waren en er dus te grote afrondingsverschillen zouden kunnen ontstaan.

## § 5. Samenstelling van het plantgoed

Tabel 4 bevat de samenstelling van het plantgoed, in de verschillende maten, uitgedrukt in het aantal kilogrammen per are, vanaf 1966-'67.

Deze cijfers hebben betrekking op de beide zandgebieden de "Zuid" en Breezand e.o.

Tabel 4. Samenstelling van het plantgoed in kilogrammen per are

## Wijziging in bedrijfsnummering

Ter vereenvoudiging van de administratie is bij het opbrengstonderzoek bloembollen een andere bedrijfsnummering ingevoerd.

Om vergelijkingen met voorgaande opbrengstoverzichten te vergemakkelijken, volgt hieronder een overzicht van de veranderde bedrijfsnummers; de overige nummers zijn ongewijzigd gebleven.

| Nieuw Nr. | Oud Nr. | Nieuw Nr. | Oud Nr. |
|-----------|---------|-----------|---------|
| 100       | 320     | 124       | 024     |
| 101       | 321     | 125       | 137     |
| 103       | 323     | 126       | 326     |
| 104       | 304     | 127       | 327     |
| 105       | 335     | 128       | 027     |
| 107       | 017     | 129       | 029     |
| 108       | 328     | 130       | 330     |
| 109       | 339     | 132       | 332     |
