

# DIFFERENT TYPES OF AQUAPONIC SYSTEMS

## MEDIA BASED

Media based, flood and drain systems such as this are most common for home use and are the easiest to maintain.

## NUTRIENT FLOW TECHNIQUE (NFT)

NFT systems use a film of water over the roots of the plants. These systems are most common for home use.

or the nutrients to reach the roots of the plants. These systems are most common for home use and are the easiest to maintain.

## RAFT BASED

Raft based systems or deep water culture (DWC) is often the preferred method for commercial aquaponics systems. It's highly recommended that solids filtration is used, otherwise solids will build up on the roots.
