

# Social system to support innovation adoption on (animal) farms in Southeast Asia: A systematic review

Ibnu Budiman, Marjolein Derks, Sahara, Annemarie Wagemakers

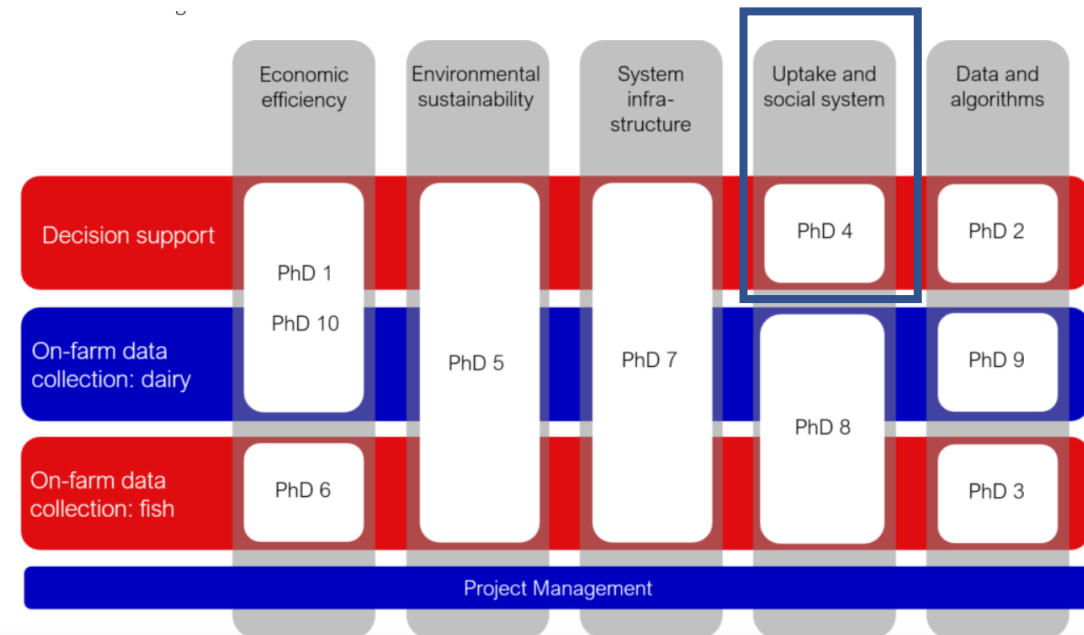

Wageningen University and Research, IPB

[Ibnu.Budiman@wur.nl](mailto:Ibnu.Budiman@wur.nl)

# Promoting smart/sustainable animal farming in Indonesia

Smart-In-Ag (short for Smart Indonesian Agriculture) is a joint research program between [Wageningen University and Research](#) in The Netherlands and [IPB University](#) in Indonesia, together with State Agriculture Polytechnic in Kupang, and the industrial partners: Single Spark, e-Fishery, WorldFish, and Dairy Pro Indonesia. It is funded by [INREF](#) and [LPDP](#). Additionally, project partners add to the funding by in-kind contributions.

# 4-year research design

Develop a contextual framework

Testing the framework

A case study in Indonesia

Zoom in on farmers behavior and social network

Identify enabling adoption factors

	Factors	Actors
Transition strategy	AB	1, 2

Improving the social system framework

# Background

- Many related studies are often concentrated on **individual** adoption **determinants** (Klerkx, Jakku, & Labarthe, 2019), and rely only on a predictive association, in Europe, North America, Australia, NZ (Caffaro, Roccato, Micheletti Cremasco, & Cavallo, 2019; Pierpaoli et al., 2013). > lack of answer to **How and Why**...and of studies in Southeast Asia
- There was a **lack of consideration for non-individual determinants and systemic (socio-institutional) issues** such as the role of (rural) stakeholders' networks and context of **interactions among adoption factors**.
  - Processes of (technology) innovation adoption are not linear and generally include a series of **feedback-loops/mechanisms** in the (social) system (Pathak et al., 2019).
- In Southeast Asia, limited resources on majority **small farmers** tend to make them often having less social interaction...

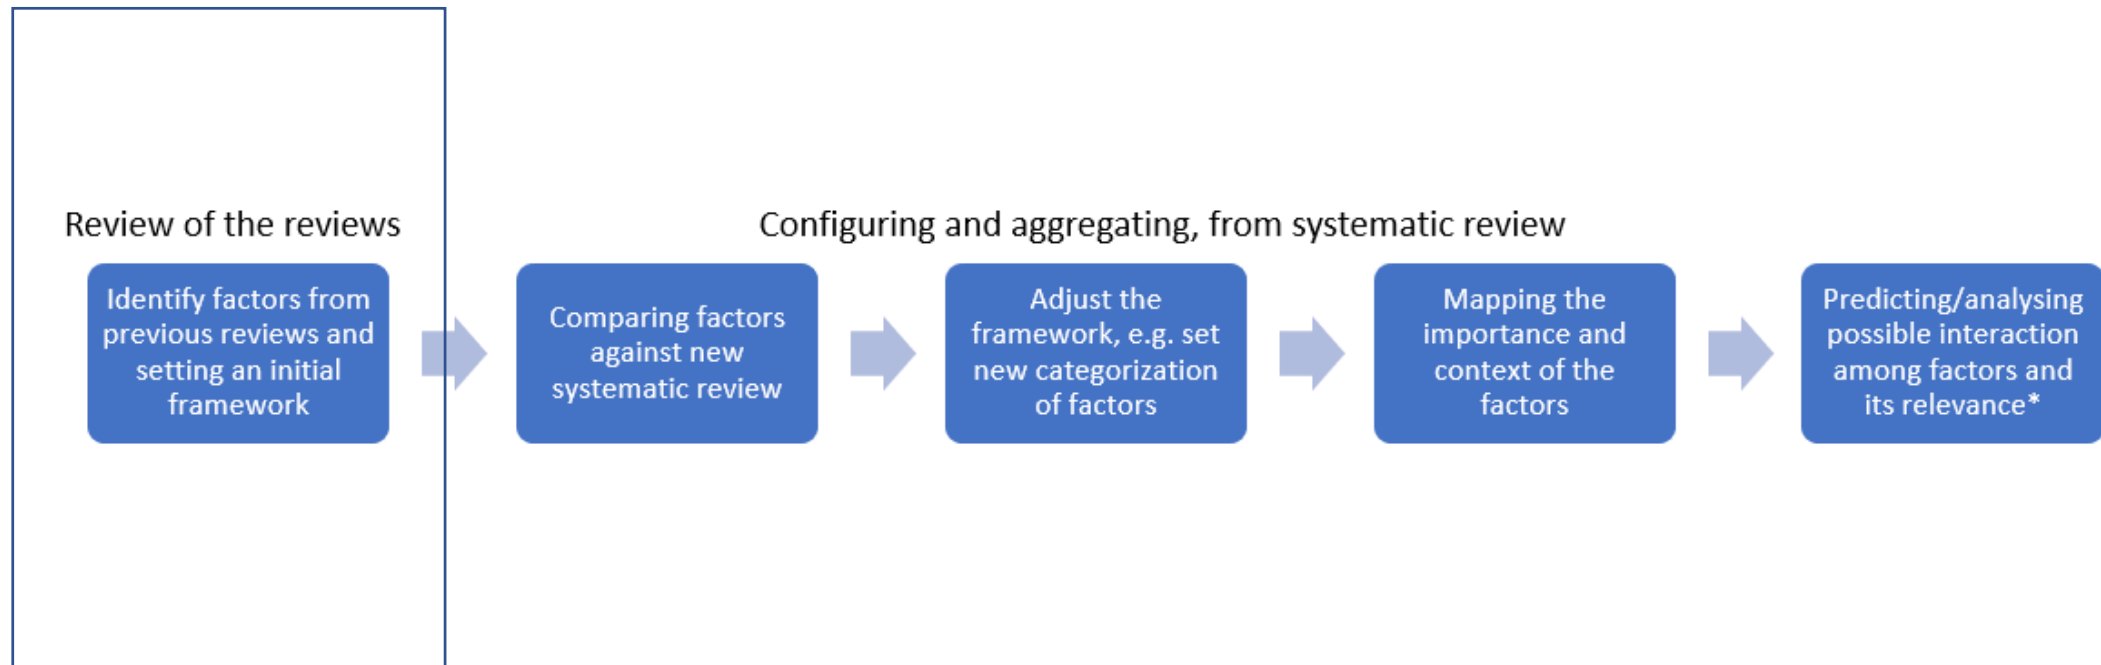

WAGENINGEN  
UNIVERSITY & RESEARCH

# Research questions

What are socio-institutional factors/system that influence innovation adoption on (small) animal farms in Southeast Asia?

What is known about the interaction between factors?

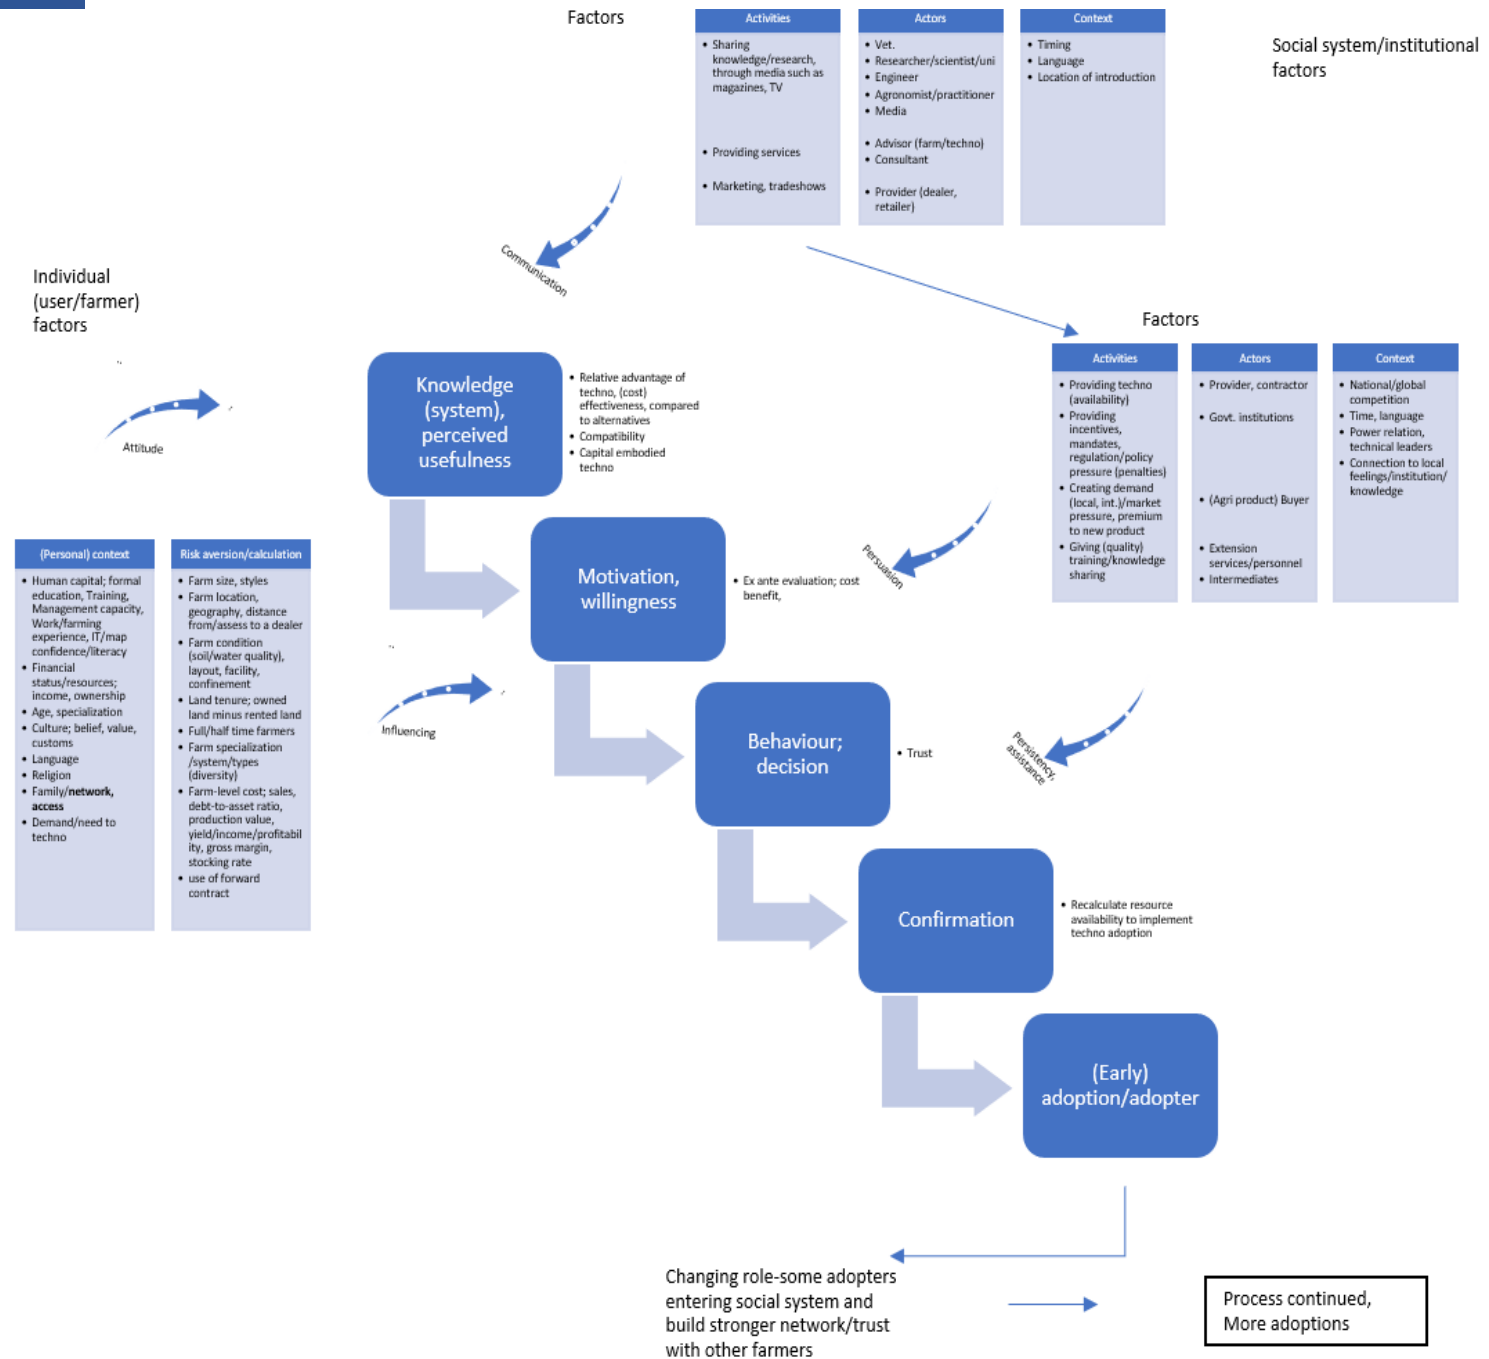

# Methods: Review processes

From 5 global review papers

# Initial framework

# Twenty-five factors - framework synthesis

## Individual factors

- Human capital; formal education, Training, Management capacity, Work/farming experience, IT/map confidence/literacy
- Financial status/resources; income, ownership
- Age, specialization
- Culture; belief, value, customs
- Language
- Religion
- Family/network, access
- Demand/need to technology
- Farm size, styles
- Farm location, geography, distance from/assess to a dealer
- Farm condition; soil/water quality, layout, facility, confinement
- Land tenure; owned land minus rented land
- Job status; Full/half time farmers
- Farm specialization /system/types (diversity)
- Farm-level cost; sales, debt-to-asset ratio, production value, yield/income/profitability, gross margin, stocking rate
- Use of forward contract

## Socio-institutional factors

- Sharing knowledge/research, through media such as magazines, TV
- Providing (consultancy) services
- Marketing, tradeshow
- Provision of technology, availability, ease of use
- Providing incentives, mandates, regulation/policy pressure (penalties)
- Creating demand (local, international)/market pressure, premium price to new product
- Giving (quality) training/knowledge sharing
- Actor networks/interaction; cooperation/conflict, change agents

# Methods: Systematic review

Review of the reviews

Identify factors from previous reviews and setting a framework

Comparing factors against new systematic review

Adjust the framework, e.g. set new categorization of factors

Mapping the importance and context of the factors

Predicting/analysing possible interaction among factors and its relevance\*

# Systematic review

## Included if

Population: livestock farmers, smallholders, rural/livestock stakeholders

Intervention: Setting/context of papers are on technology adoption/diffusion/dissemination (including its knowledge exchange) in livestock farming

Comparison: adoption barriers/factors by farmers and/or social theories such as/related to social practice, stakeholders/farmers behaviour/behaviour change, systemic approach etc.

Empirical papers with case studies located in South east Asia

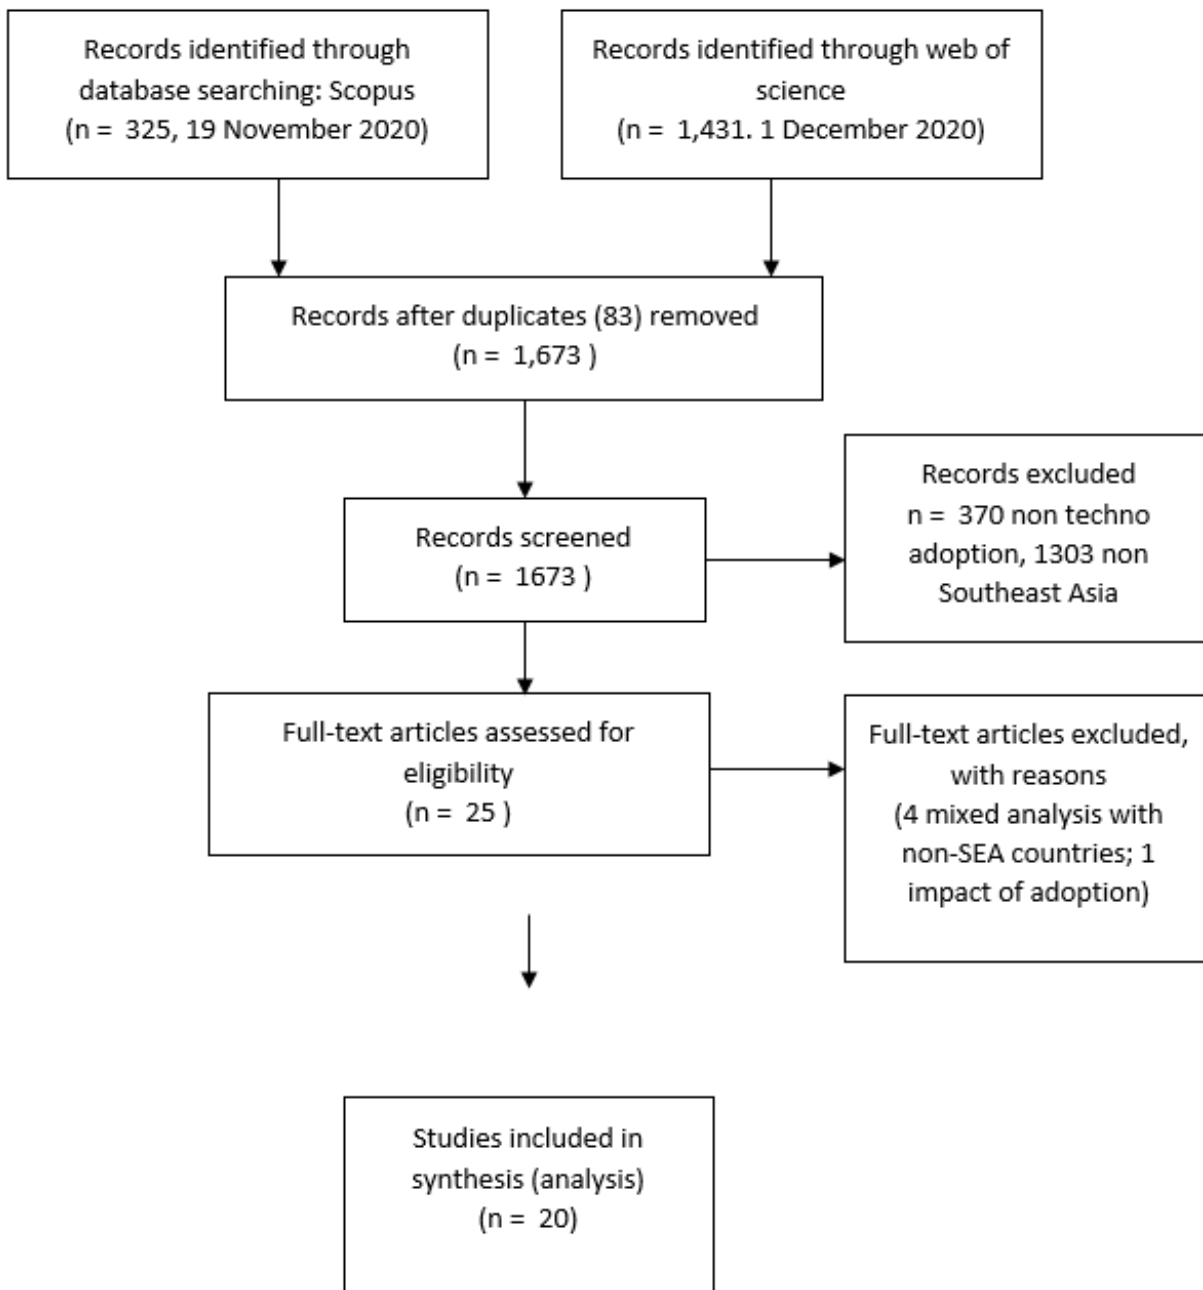

Year of publication after 2000

Ecological determinants; climate risk,  
Pressures to land/soil/water/air/species/ecosystems

Institutional factors

Environmental  
cost to  
farm(ers'  
households)

Development of actor networks/interaction; cooperation, sharing expectation

Environmental  
cost

Innovation  
characteristics

Price, compatibility, practicality, credibility,  
benefits

•Techno providers, promoters

Learning  
platforms

Extension program, peer group,  
experimentation, M-E

•Extension personnel, farmers groups/cooperatives, successor,

Market

Demand, premium price

•Buyer, companies, govt

Policy and  
governance

Regulation, incentive, dissemination strategy

•National and local govt, food industries

Farmer

Individual (user) factors

Perception  
on  
innovation

- Education, age, experience
- Social capital

Vision to  
development

- Culture
- Local practices

Farm size,  
productivity

- Income
- Farming system

Knowledge

- Relative advantage of innovation: effectiveness, capital embodied technologies

Motivation,  
willingness

- Perceived usefulness/ease of use
- Trust

Behaviour,  
intention

- Ex ante evaluation
- Cost benefit estimation

Confirmation,  
decision

- Recalculate resource availability to adopt,
- Risk aversion
- Bargaining process/discussion

(Early)  
adoption

Building  
Awareness

Communication

Persuasion

Persistent  
attraction

Influencing

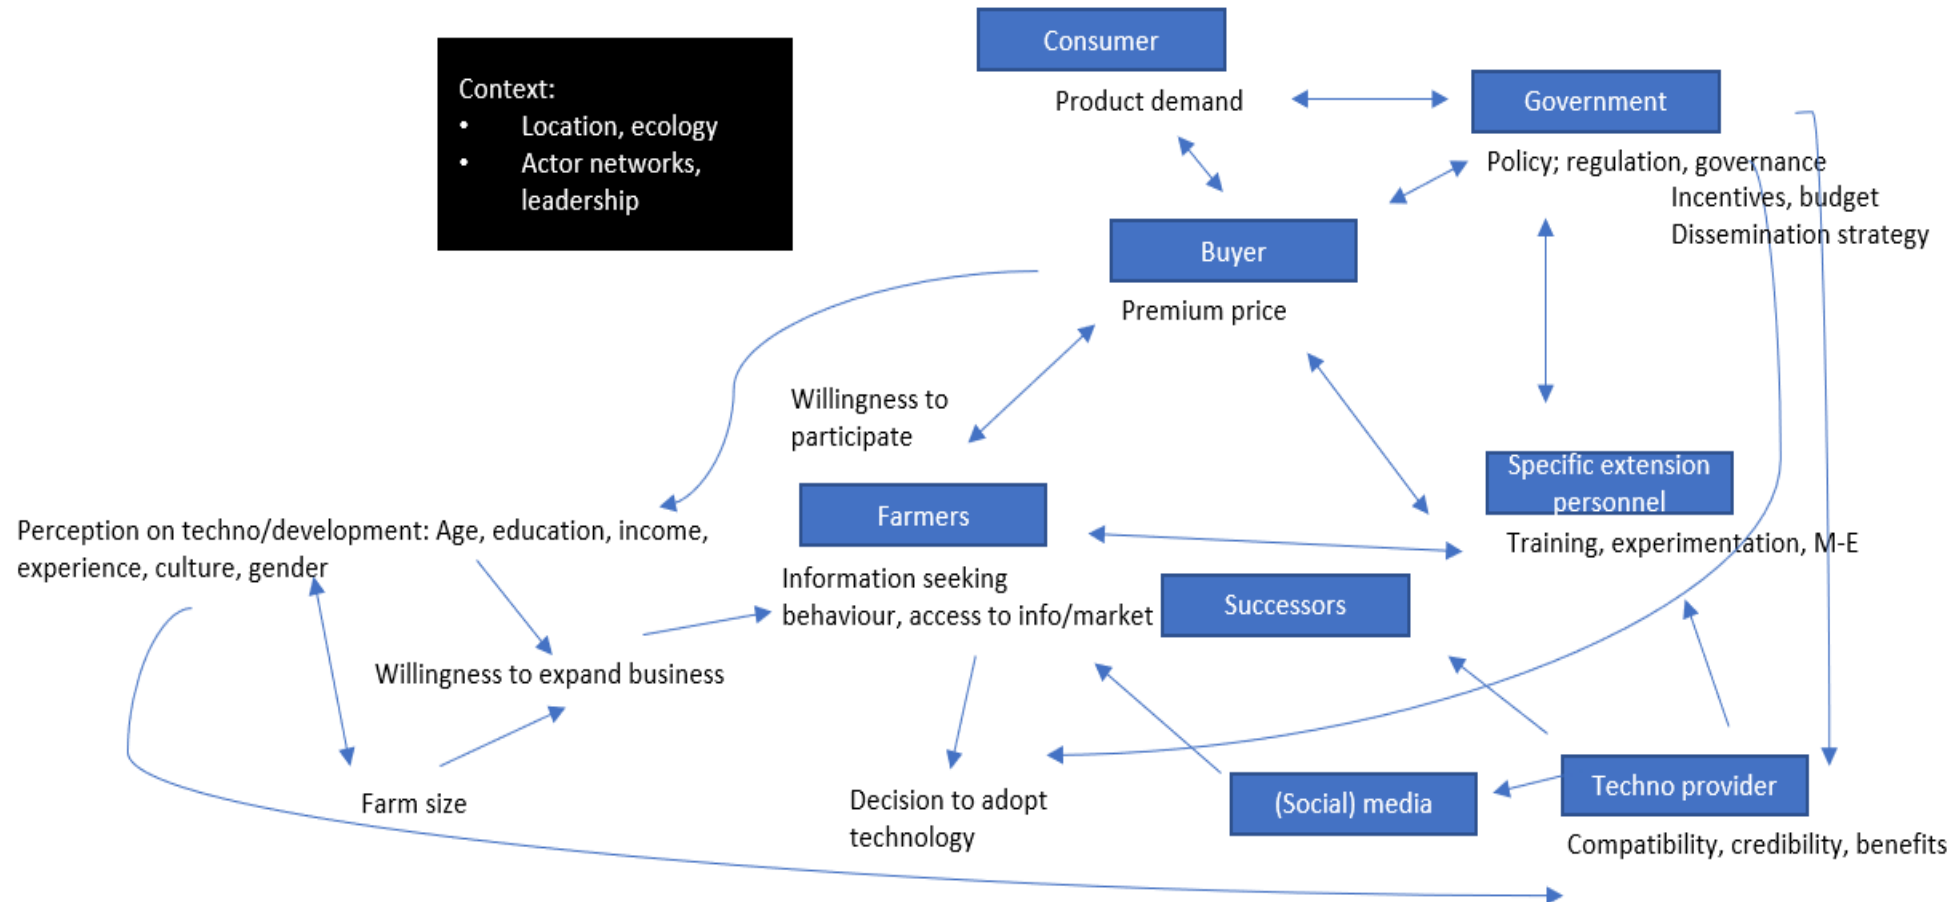

Supporting

Some stop adoption due to  
inconsistency in some  
determinants

Some early adopters will enter  
social system, changing their  
role and build stronger  
network/trust with other  
farmers

Process continued in  
cycle, more adoptions

# Interaction between factors

# Relevance; the use of the framework

- To select specific locations and strategy for promoting agriculture technologies/innovation
- Further development; To predict adoption rate of innovation

## CASE DISTRIBUTION

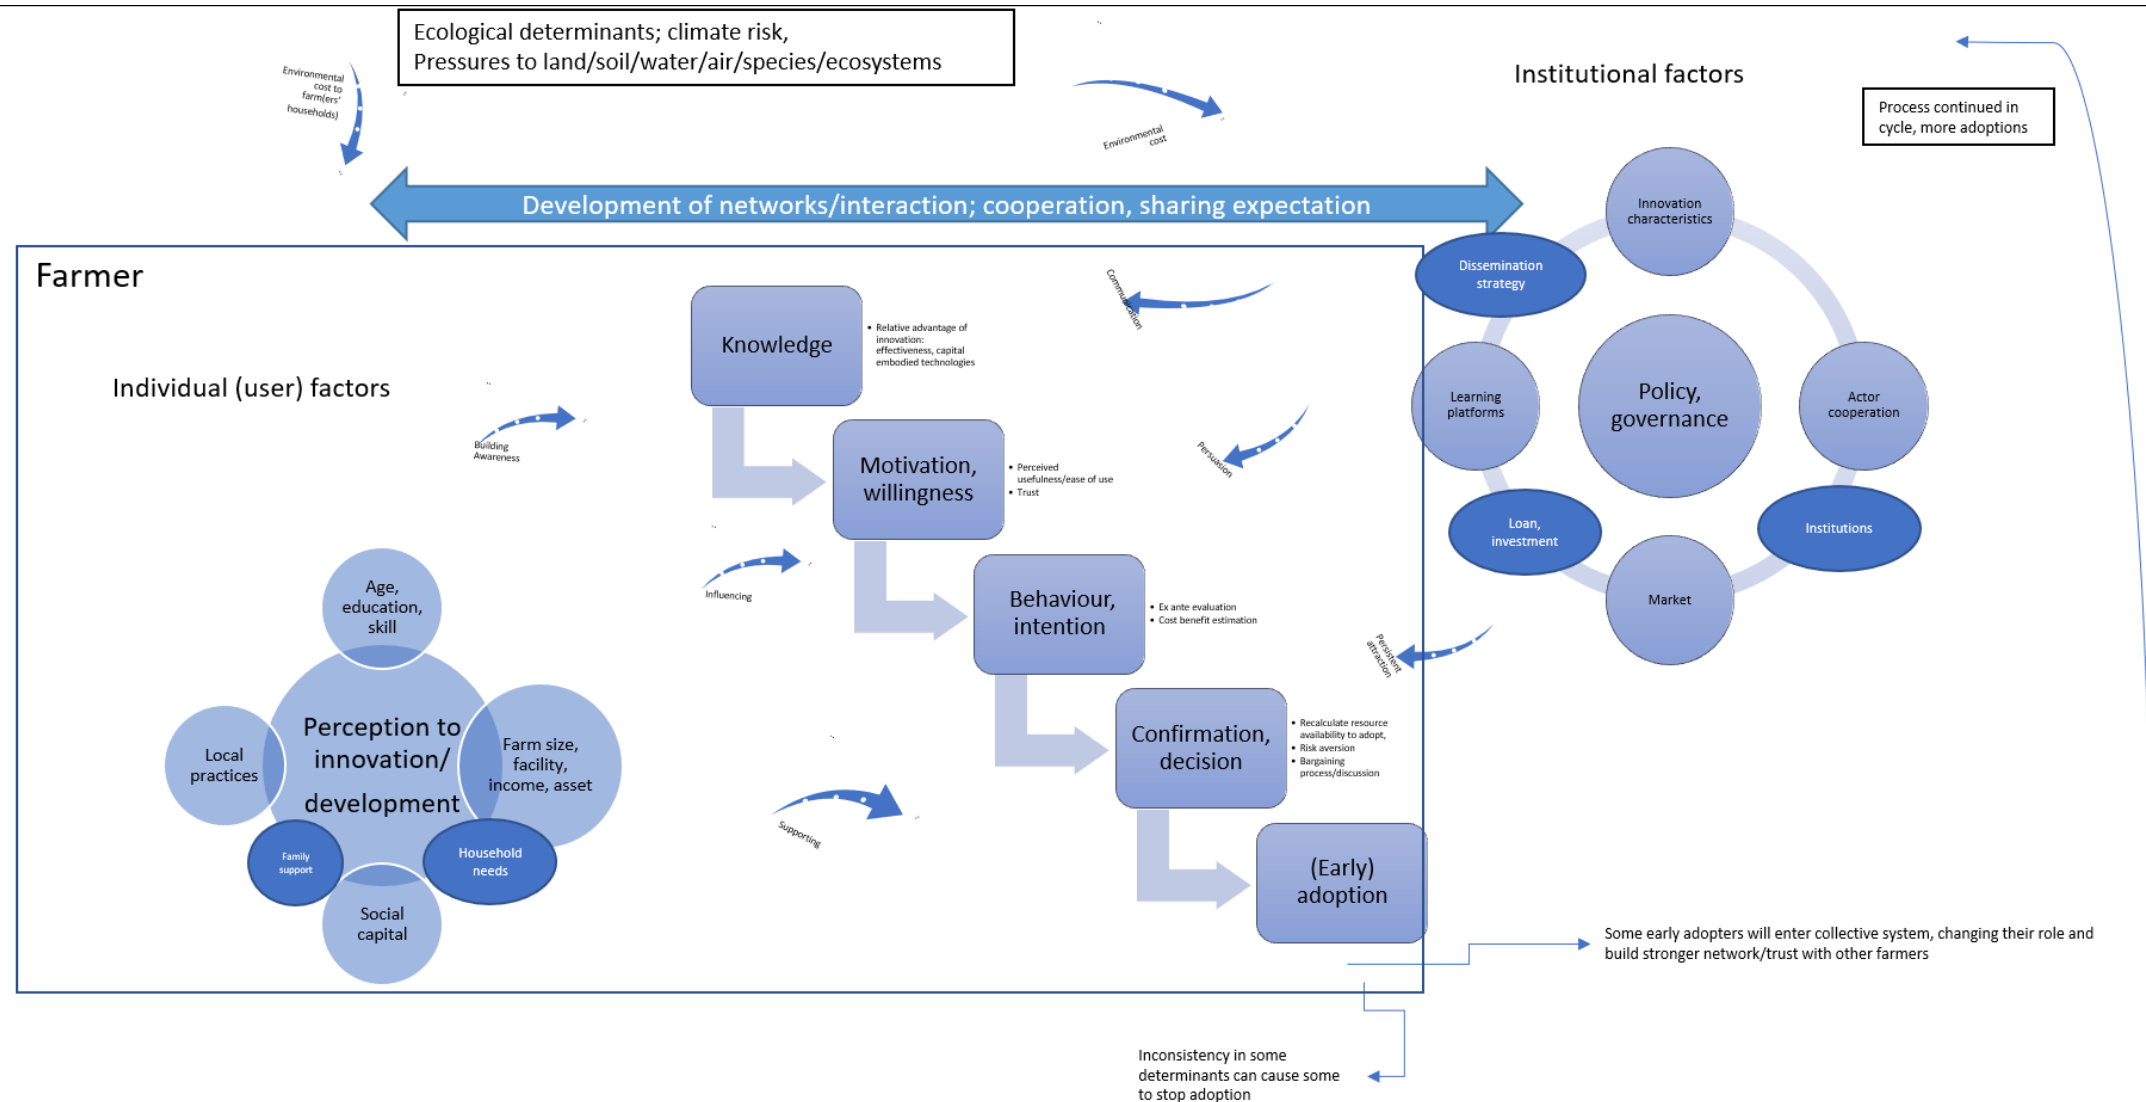

**WAGENINGEN**  
UNIVERSITY & RESEARCH

# Mapping the important factors

- Scoring the importance of the identified factors:
  - 1 for factors that have a significant correlation to the decision for adoption, and 0.5 for factors that have a lower correlation to the decision
    - Quantitative and mixed-method papers; significant factor =  $p\text{-value} \leq 0.05$
    - Qualitative papers; significant factor = the most emphasized points in the result and analysis
  - In the end, we used range classification for accumulated scores; e.g. 6-10 = important factors and 1-5 = less important factors
- Many technology adoption studies use statistical approach to measure the strength of correlation between multiple factors with farmers technology adoption decision. Different treatment are applied for qualitative papers that did not use that correlation level approach. This depends on the nature of the selected papers.

# Aggregation levels

# Review of the reviews

	Title	Publication year	Authors	Countries case studies	Agriculture/livestock technologies
1	A systematic literature review of the factors affecting the precision agriculture adoption process	2019	Pathak, Hari Sharan Brown, Philip. Best, Talitha	United States, Germany, Denmark, Turkey, Hungary, Nigeria, Canada, Brazil and Iran.	<ul style="list-style-type: none"> <li>Precision Agriculture: Yield monitoring, grid/GPS soil sampling, aerial photos and satellite imagery, geographical information system</li> <li>Management techno: variable rate, automation irrigation</li> </ul>
2	Drivers of Precision Agriculture Technologies Adoption: A Literature Review	2013	Pierpaoli, Emanuele. Carli, Giacomo. Pignatti, Erika. Canavari, Maurizio	United States, Nigeria, Iran, Canada	Precision agriculture technologies
3	Factors influencing the adoption of precision agricultural technologies: a review for policy implications	2012	Tey, Yeong Sheng. Brindal, Mark	Australia, United States	Precision agriculture: (1) GPS, (2) yield monitoring systems, (3) remote sensing systems, (4) soil sampling regimens and (5) variable-rate applicators.
4	Technology Adoption by Agricultural Producers: A Review of the Literature	2018	Ugochukwu, Albert I. Phillips, Peter W. B.	Global review	Livestock health and breeding technologies; animal health (vaccines), disease prevention, and management practices to breeding (artificial insemination, embryo transplants, and sexed semen), genetics, and genomics innovations
5	A review of social science on digital agriculture, smart farming and agriculture 4.0	2019	Klerkx, Laurens. Jakku, Emma. Labarthe, Pierre	General review	Precision farming, digital agriculture

# Inclusion criteria, framework synthesis

- Innovation intended for farmers, smallholders, rural stakeholders,
- Setting/context of papers are on innovation/technology adoption/diffusion/dissemination (including its knowledge exchange) in animal agriculture, mixed crop-livestock/animal system
- Analysing adoption barriers/factors by farmers
- Review papers with case-studies from multiple countries
- Year of publication after 2000

To search for the review, three key concepts were defined; 1. Animal farming, 2. Technology or innovation adoption, and 3. Review studies. These are used as search terms. This query was used in Google Scholar.
