

Session Partnerships: April 11th 15.45 hrs

4s1: The circular food systems network: exploring opportunities for food security by circularity in different regions in the world

Connected Circularity Challenge

Collectively designing the future of food & agriculture

Miel Hooijdonk 1), Joost de Leij 2)

1) Wageningen Academy | WUR

2) Limelights

It's time for the value chain to collaboratively think about the long-term future of agriculture and food production.

The circular economy is an important alternative for a sustainable food future. The circular economy will be realized by a collaborative approach, uniting key actors in the food & agriculture value chain. It's time to accelerate together.

The Connected Circularity Challenge 2022 is a collaborative value chain innovation in a 24-hour event on the Wageningen Campus. Bringing together key value chain actors to work together on accelerating the transition towards connected circularity.

Interested in a sneak preview, join the workshop!

Keywords: co-creation, value chain innovation, successful transitions
