

PROPOSITIONS

1. More realistic models give better guidance to decision-makers to identify the best management option but may hamper the understanding of mechanisms at work.
(this thesis)
2. The ability of managed tropical forests to store carbon is grossly underestimated.
(this thesis)
3. Lock-down and home office reduce pressure on the environment and trigger a change of human-nature interaction in the long run.
4. As do-it-yourself information becomes more readily available through the internet, the availability of jobs in the service sector declines.
5. Working separated from one's family allows being more productive but hampers opportunities for stress-relief.
6. A longer time to study towards a PhD degree leads to a more capable researcher.

Propositions belonging to the thesis, entitled

**"Forest management for climate change mitigation: Cases from
Indonesia"**
